Psychological Assessment Of Handicapped Infants And Young Children:

Psychological Assessment of Handicapped Infants and Young Children Gordon Ulrey, Sally J. Rogers, 1982

Assessment of Young Developmentally Disabled Children Theodore D. Wachs, Robert Sheehan, 2013-06-29 Our knowledge of the cognitive and social emotional functioning of developmentally disabled infants and preschoolers derives in large part from our assessment of such children This book has been developed to familiarize readers with the characteristics of developmentally disabled children and to introduce to readers aspects of measurement that are of relevance to the assessment of atypical infants and preschoolers The book has been developed with clinicians and prospective clinicians in mind These are individuals who are committed to the care and education of developmentally disabled infants and preschoolers and the families of those children The book has thus been written to provide support for the use of assessment data in planning early intervention programs Of special note in the development of this edited book is that it is divided into four major parts with interrelated chapters in each part The authors of chapters in Parts II and III had access to the chapters in Part I before writing their chapters The summary chapters found in Part IV were similarly written by authors having access to all chapters in Parts I III This approach to the development of an edited book was chosen as a way of ensuring an integration of major concepts throughout the book This process is also a reflection of our belief that assessment is an interdisciplinary process involving the synthesis of a number of diverse interests

Assessment Issues in Child Neuropsychology Michael G. Tramontana, Stephen R. Hooper, 2013-11-21 Neuropsychology has its roots in clinical neurology Reading case descriptions by 19th century neurologists such as Wernicke's painstakingly detailed examinations of patients with the aphasic symptom complex makes it obvious that neuropsychology is not a new discipline Even the marriage with psychology is not new the neurologist Arnold Pick for example was fully conversant with the developments in contemporary psychological as well as linguistic research However the primary focus of 19th and early 20th century psychology was on general psychology and only a small number of psychologists ventured into what then was called differential psychology the psychology of individual differences including a few who became attached to neurological research and rehabilitation units after World War I It remained until World War II for psychologists to establish a more solid working relationship with neurology What psychology had to offer to neurology was its experimental skill the development of a sophisticated methodology and for clinical work the development of psychometrics On the whole the marriage between the two disciplines has been fruitful leading to new insights models and discoveries about brain behavior relationships documented in several textbooks which appeared in rapid succession since the 1960s In clinical practice neuropsychology has been inventive in some respects in others merely introducing psychometric rigor to already existing neurological examinations As described in greater detail in this book developmental neuropsychology is of even more recent origin

Assessment of Young Children with Special Needs Susan M. Benner, Joan Grim, 2013 There are many assessment

systems available to provide the answers teachers and parents seek regarding the progression of infants toddlers and young children However simply choosing and administering an assessment instrument or procedure from the wide array of tools available today can be an overwhelming task Assessment of Young Children with Special Needs helps prepare teachers for the task of evaluating the skills of infants toddlers and preschool children with developmental delays and those considered at risk to

Handbook of Assessment in Childhood Psychopathology Cynthia L. Frame,Johnny L. Matson,2013-11-21 One of the most important practical problems in child psychology and psychia try is the differential diagnosis of emotional disorders Until recently the gener al mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults In addition there had been few assessment tools available for use with children aside from modified versions of adult instruments Understandably this approach was controversial and dissatisfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions Furthermore a great deal of research on methodology in child assessment procedures has emerged recently Yet in spite of these advances practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assign ment of a psychiatric diagnosis The focus of this book is to outline the various methods of viewing and categorizing the wide range childhood psycho pathology with special emphasis on the end product of making a differential diagnosis Our goal was to make this book unique in several ways First we attempted to cover a wider range of disorders than is typical in currently available hand books

Psychological Evaluation of the Developmentally and Physically Disabled Jean-Pierre Fouque, Vincent B. Van Hasselt, 2013-06-29 The past decade has witnessed a considerable upsurge of clinical and research interest in the problems of developmentally and physically disabled persons Indeed professionals from special education rehabilitation psychiatry and social work have all directed attention to the development and implementation of evaluation and remedial programs The heightened activity in this area is in part a result of early assessment research with these populations which provided preliminary evidence of difficulties in social and emotional adjustment in many disabled individuals In response to these findings many intervention efforts have been implemented to deal with these issues and improve the life situation of the disabled Also there were indications that developmentally and

physically disabled children often were deprived of adequate educations As a result legal and legislative initiatives have been enacted in recent years to make public education available to all students irrespective of disability Central to all therapeutic and psychoeducational endeavors with the disabled is psychological evaluation Only through careful and comprehensive psychological evaluation can areas of deficit as well as strengths be identified Once treatment targets and goals have been ascertained psychological evaluation is needed to determine the efficacy of intervention strategies However the field of psychological evaluation in general and with disabled persons in particular has become highly specialized This is largely a function of the changing roles of psychological evaluators

Assessment and Programming for Young Children with Low-Incidence Handicaps Cecil R. Reynolds,2013-11-11

The public schools have taken on increasing responsibility over the last decade for providing in school educational services to children with low incidence handicaps children who not very many years ago would have been relegated to custodial care or limited to care only in the home With the increasing responsibility for educating these children has come recognition that few of us have the requisite knowledge or skills to deliver high quality services to these children University programs are providing more staff but the existing staff must also be trained We have been involved for several years with the special education branch of the Nebraska Department of Education in the provision of in service training in the early identification and assessment of handicapping conditions when we realized an even greater need for training regular classroom teachers administrators and psychologists in addition to early childhood special education personnel about the nature of low incidence handicaps and how they might be dealt with in the public school setting Knowing the enormity and the expense of such an undertaking we tentatively approached the State Department They too were cognizant of this need and welcomed our ideas Jan Thelen and her capable staff then took to coordinating the planning with us and the Nebraska Department of Education provided the fundings

Early Intervention Studies for Young Children with Special Needs David R. Mitchell,Roy Irwin Brown,2013-12-14 This is the fourth volume in the Rehabilitation Education Series It is the first volume to be co edited and follows a volume on quality of life The first few years of a child's life sets the pattern for many issues

associated with quality of life Although intervention may at later stages enhance quality of life it is in these first years that the attitudes and systems of society can have long lasting effects The early years are increasingly seen as the province of the educator and in children with disabilities special education They are already recognized as the province of the health professional Here we attempt to take a different line reinforcing the idea that child and family are the interacting system we serve The needs are often multidisciplinary but we need to recognize context as the critical marker Thus assessment needs to be linked to programmes and therefore programmes themselves have to be evaluated and environmental issues underlined In particular the contribution from those with sociological interests are noted Intervention whether it be psychological or educational is frequently and ideally placed in the hands of parents or the nearest caregiver The professional becomes the processor ever mindful of the context in which needs and goals are experienced These issues are basic to the issues of quality of life D R M R I B Preschool Assessment Marla R. Brassard, Ann E. Boehm, 2011-06-08 Comprehensive and user friendly this ideal professional reference and graduate text provides a developmentally informed framework for assessing 3 to 6 year olds in accordance with current best practices and IDEA 2004 guidelines The authors are leading clinician researchers who take the reader step by step through selecting appropriate measures integrating data from a variety of sources and using the results to plan and evaluate effective interventions and learning experiences Coverage encompasses screening and assessment of cognitive linguistic emotional and behavioral difficulties including mental retardation and autism Case studies illustrate key facets of assessing diverse children and families appendices offer concise reviews of over 100 instruments

Diagnosis and Assessment in Autism Eric Schopler, Gary B. Mesibov, 2013-11-21 Division TEACCH located in the School of Medicine at the University of North Carolina at Chapel Hill was one of the first programs in the country to understand that autism was an organic rather than a biologic condition We were also one of the earliest programs to recognize the enormous variability in characteristics and behaviors of children described as autistic For these reasons the processes of diagnosis and assessment have always been important and central to our program We are therefore extremely pleased to have a volume representing the most current thinking of the field's leaders in these important areas As with the preceding books in our series Current Issues in Autism this volume is based on one of the annual TEACCH conferences held in Chapel Hill each May The books are not simply published proceedings of the conference papers however Rather conference participants are asked to develop a full chapter around their presentations Other international experts whose work is beyond the scope of the conference but related to the major theme are asked to contribute chapters as well These volumes are designed to provide the most current knowledge in research and professional practice available on the most important issues defining and clarifying autism
