Excerpt from *Psychopathology of Everyday Life* Professor Freud developed his system of psychoanalysis while studying the so called borderline cases of mental diseases such as hysteria and compulsion neurosis By discarding the old methods of treatment and strictly applying himself to a study of the patient s life he discovered that the hitherto puzzling symptoms had a definite meaning and that there was nothing arbitrary in any morbid manifestation Psychoanalysis always showed that they referred to some definite problem or conflict of the person concerned It was while tracing back the abnormal to the normal state that Professor Freud found how faint the line of demarcation was between the normal and neurotic person and that the psychopathologic mechanisms so glaringly observed in the psychoneuroses and psychoses could usually be demonstrated in a lesser degree in normal persons This led to a study of the faulty actions of everyday life and later to the publication of the *Psychopathology of Everyday Life* a book which passed through four editions in Germany and is considered the author s most popular work About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art
