Burns,2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt's lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells *THE SENSE*

The Reading Crisis Jeanne Sternlicht CHALL, Vicki A. Jacobs, Luke E. Baldwin, Jeanne Sternlicht Chall, 2009-06-30 How severe is the literacy gap in our schools Why does the nine year old child from a culturally disadvantaged background so often fall victim to the fourth grade slump Although the cognitive abilities of these children at risk may be consistent with the norm their literacy development lags far behind that of other children In The Reading Crisis the renowned reading specialist Jeanne Chall and her colleagues examine the causes of this disparity and suggest some remedies Using Chall s widely applied model of reading development the authors examine the strengths and weaknesses in the reading writing and language development of children from low income families in an attempt to identify the onset of their difficulties They show how in the transition from learning the medium to understanding the message the demands on children s reading skills become significantly more complex The crucial point is fourth grade when students confront texts containing unfamiliar words and ideas that are beyond the range of their own experience According to Chall s findings the lack of specific literacy skills not cognitive factors explains the deceleration in the reading and writing development of low income children The authors outline an active role for the schools in remedying weaknesses in literacy development and give suggestions for the home and the community Their recommendations address both practical issues in instruction and the teacher student dynamic that fosters literacy development Table of Contents Preface Acknowledgments 1 Literacy and Language among Low Income Children 2 The Children Their Schools and Their Families 3 Reading Development 4 Writing Development 5 Language Development 6 Interrelations among Reading Writing and Language 7 Classroom Instruction and Literacy Environments 8 Home Influences on Literacy and Language 9 Influences on the Lower and Higher Grades 10 Where Do We Go from Here Epilogue Persistent Questions Appendix A Samples of Narrative Writing Representing Average Holistic Ratings and Production Students Handwriting Appendix B Samples of Expository Writing Representing Average Holistic Ratings and Production Students Handwriting References Index Reviews of this book An important study for wide academic and professional attention Suzanne W Wood Library Journal

Complement Therapeutics John D. Lambris, V. Michael Holers, Daniel Ricklin, 2012-09-19 This book highlights progress and trends in the rapidly evolving field of complement related drug discovery and spotlights examples of clinical applications As an integral part of innate immunity and critical mediator in homeostatic and inflammatory processes the human complement system has been identified as contributor to a large number of disorders including ocular cardiovascular metabolic autoimmune and inflammatory diseases as well as in ischemia reperfusion injury cancer and sepsis In addition complement is often involved in adverse immune reactions to biomaterials cell and organ transplants or drug delivery systems Although the complement cascade with its close to 50 extracellular

protein targets has long been recognized as an attractive system for therapeutic modulation the past few years have seen a particularly strong boost in interest Fueled by novel research insight and the marketing of the first complement targeted drugs a plethora of highly creative treatment approaches and potent drug candidates have recently emerged and are currently evaluated in disease models and clinical trials The chapters in this book cover a wide range of topics related to the development of complement therapeutics ranging from the molecular and functional description of complement targets to the presentation of novel inhibitors improved treatment strategies as well as examples of disease models and clinical applications The broad and up to date overview on a highly versatile and dynamic field renders this book an indispensable source of information for researchers and clinicians dealing with therapeutic and disease related aspects of the human complement system
