## **Reconstructing Old Age:**

**Reconstructing Old Age** Chris Phillipson, 1998-10-26 In this timely and authoritative overview on social gerontology and social theory Chris Phillipson outlines the changing contexts and experiences associated with later life as we move into a new century The book critically reviews the different theoretical explanations which attempt to explain these changes Phillipson shows how in late modernity changes to pensions employment and retirement and intergenerational relations are placing doubt on the meaning of growing old He suggests that later life is being reconstructed as a period of potential choice on the one hand but also of risk and danger on the other This book will be essential reading for students and academics in social gerontology as well as for students and academics in sociology social policy and related disciplines interested in the future of an ageing population and the future of social gerontology

**Reconstructing Retirement** David Lain, 2018-01-24 In the United Kingdom retirement programs are being reconstructed to follow the American practice of abolishing mandatory retirement and increasing state pension ages This timely book compares prospects for work and retirement at age sixty five plus in both the United States and the United Kingdom After exploring the shifting logic behind both nations policies policies that increase both the need and opportunities to work past age sixty five David Lain presents an original comparative statistical analysis on the wide range of factors influencing employment at this age from the ability to move between jobs in order to remain employed to changing employment trends He then proposes a series of policies to address these factors across the life course and promote security and autonomy for older people Pathways to employment after sixty five are complex and pressures to work at this age are likely to result in very unequal outcomes This book will play a vital role in creating a more positive more equitable future for late careers and retirement

*A History of Regulating Working Families* Nicole Busby, Grace James, 2020-08-06 Families in market economies have long been confronted by the demands of participating in paid work and providing care Across Europe the social economic and political environment within which families do so has been subject to substantial change in the post World War II era and governments have come under increasing pressure to engage with this important area of public policy In the UK as elsewhere the tensions which lie at the heart of the paid work unpaid care conflict remain unresolved posing substantial difficulties for all of law s subjects both as carers and as the recipients of care What seems like a relatively simple goal to enable families to better balance care giving and paid employment has been subject to and shaped by shifting priorities over

time leading to a variety of often conflicting policy approaches This book critiques how working families in the UK have been subject to regulation It has two aims To chart the development of the UK s law and policy framework by focusing on the post war era and the growth and decline of the welfare state considering a longer historical trajectory where appropriate To suggest an alternative policy approach based on Martha Fineman s vulnerability theory in which the vulnerable subject replaces the liberal subject as the focus of legal intervention This reorientation enables a more inclusive and cohesive policy approach and has great potential to contribute to the reconciliation of the unresolved conflict between paid work and care giving

Reconstructing Empedocles' Thought Chiara Ferella, 2024-02-08 To understand Empedocles thought one must view his work as a unified whole of religion and physics Only a few interpreters however recognise rebirth as a positive doctrine within Empedocles physics and attempt to reconcile its details with the cosmological account This study shows how rebirth underlies Empedocles cosmic system being a structuring principle of his physics It reconstructs the proem to his physical poem and then shows that claims to disembodied existence individual identity and personal survival of death s prove central to his physics that knowledge of the cosmos is the path to escape rebirth that purifications are essential to comprehending the world and changing one s being and that the cosmic cycle with its ethical import is the ideal backdrop for Empedocles doctrine of rebirth This title is part of the Flip it Open Programme and may also be available Open Access Check our website Cambridge Core for details
