The Guided Mind Jaan Valsiner, 1998 How is something as broad and complex as a personality organized What makes up a satisfactory theory of personality In this ambitious book Jaan Valsiner argues for a theoretical integration of two long standing approaches the individualistic tradition of personalistic psychology typified by the work of William Stern and Gordon Allport and the semiotic tradition of cultural historical psychology typified by the work of L S Vygotsky The two are brought together in Valsiner's theory which highlights the sign constructing and sign using nature of all distinctively human psychological processes Arguing that the individualistic and the cultural traditions differ largely in emphasis Valsiner unites them by focusing on the intricate relations between personality and its social context and their interplay in personality development The semiotic devices internalized from the social environment shape an individual's development and the flow of thinking feeling and acting Valsiner uses this theoretical approach to illuminate two remarkable and remarkably different

phenomena letters from the mother of Allport's college roommate a key empirical case in Allport's theory and the ritual movements of a Hindu temple dancer Valsiner shows how both exemplify basic human tendencies for the cultural construction of life courses The Guided Mind shows the fundamental unities in the vastly diverse phenomenon of human personality

Culture and the Development of Children's Action Jaan Valsiner, 1997-06-23 In this deeply probing intellectually challenging work Dr Jaan Valsiner lays the groundwork for a dynamic new cultural historical approach to developmental psychology He begins by deconstructing traditional developmental theory exposing the conceptual confusion and epistemological blind spots that he believes continue to undermine the scientific validity of its methodologies He describes the ways in which embedded cultural biases shape interventional goals and influence both the direction research takes and the ways in which research data are interpreted And he suggests ways in which researchers and clinicians can become more aware of and transcend those biases Dr Valsiner then develops a hierarchical systemic model that portrays development as an open ended dialectical process Central to Valsiner's approach is the premise that since each child is unique as are his or her life conditions deviations in function or the rate of development from a prescribed norm are just as likely to be constructive adaptations to changing environmental pressures as symptoms of psychological disorder Drawing upon sources as varied as linguistic philosophy structural anthropology thermodynamics and systems theory as well as the work of many of the leading figures in twentieth century developmental theory Valsiner argues convincingly for an approach to developmental psychology mature enough to recognize the difference between healthy variability and dysfunction In later chapters the focus shifts from development in the abstract to the everyday challenges encountered by the developing child Case histories illustrate the subtle interplay of cultural physiological and psychological factors in shaping childhood behavior Called an intellectual tour de force by the Bulletin of the Menninger Clinic *Culture and the Development of Children's Action* is important reading for developmental psychologists child psychologists and all child clinicians Of course no science progresses in a linear fashion It moves interdependently with the society in which it is embedded making use of the narrative forms in describing itself to its insiders and outsiders The rhetoric of scientists about their science is therefore necessarily inconsistent Sciences are both social institutions within a society and social organizations that attempt to build universal knowledge It is a complicated task for psychology to be both knowledge constructing and self reflexive at the same time Nevertheless it is the latter kind of reflexivity that guides the actual construction of knowledge Jaan Valsiner This book is a fascinating and important work that challenges much of contemporary developmental psychology The Second Edition has changed in a number of respects and much new material has been added but at root Valsiner grapples with the question how shall we understand development He continues to struggle also with what he describes rather vividly as the epistemological windmills of psychology His challenge is summed up succinctly in two lines from a poem by T S Eliot Where is the wisdom we have lost in knowledge Where is the knowledge we have lost in information from the Foreword by Kevin Connolly *The*

Contemporary Critique Of Positivism: The Issues of Replicability and Universality Uğur Berk Kalelioğlu, 2020-06-10 The aim of this book is to critically discuss the validity of replicability and universality principles of positivism from a sociological perspective The main critiques of contemporary positivism are given by the schools of thought represented by multifarious thinkers The critique of positivist sociology which confirms itself based on continuous replication and aims to reach universal laws is given and the validity of replicability principle from the sociological point of view is discussed The discussion begins with brief premises of classical positivism proceeds to contemporary critique of logical positivism and is complemented by the post 2010 Replication Crisis The particular emphasis is given to the Replication Crisis and the reasons why replication studies are rare in sociology are discussed As a result of the study it is concluded that positivist claims replication and universality principles lose their validity in sociology due to ontological epistemological individual and structural aspects

Developments in Attachment Research Robbie Duschinsky, 2025-06-06 This is an open access title available under the terms of a CC BY NC ND 4.0 licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations *Developments in Attachment Research* explores the contributions of several research groups in developmental science that have shaped the study of attachment and caregiving in recent decades each with a different image of the history of attachment research of the nature of attachment and why and how attachment research might be valuable In tracing changes in attachment theory over time the book examines the development of scientific evidence and breakthroughs The book also examines attachment research within developmental psychology as a culture considering its leadership kinship structures symbols conflicts points of entry or exit and the pressures and opportunities to which it has responded or failed to respond

Lev Vygotsky René van der Veer, 2007-11-15 Lev Vygotsky the great Russian psychologist had a profound influence on educational thought His work on the perception of art cultural historical theory of the mind and the zone of proximal development all had an impact on modern education This text provides a succinct critical account of Vygotsky's life and work against the background of the political events and social turmoil of that time and analyses his cross cultural research and the application of his ideas to contemporary education Ren van der Veer offers his own interpretation of Vygotsky as both the man and anti man of educational philosophy concluding that the strength of Vygotsky's legacy lies in its unfinished open nature

Cornerstones of Attachment Research Robbie Duschinsky, 2020 Attachment theory is among the most popular theories of human socioemotional development with a global research community and widespread interest This book re-examines the work of key laboratories that have contributed to the study of attachment along with the individuals who have contributed to its intellectual development

Cultural Psychology and Qualitative Methodology Carl Ratner, 2013-03-09 Qualitative methodologies in cultural psychology often lack the objective and verifiable character of quantitative analysis Author Carl Ratner corrects this shortcoming by rigorously systematizing qualitative methods The book discusses for example means of systematizing such subjective reports as

interviews letters and diaries which often yield valuable data that is not easily quantified Ratner argues that complex psychological phenomena are expressed through extended responses and hence are best studied by new more regularized qualitative methods that go beyond measuring simple overt responses The Observation of Human Systems Joshua W. Clegg, 2017-12-02 Contemporary mainstream psychology has moved toward methodological specificity bounded by instrumental experimentalism However this institutional reduction of sanctioned methods has not been fully embraced by all social scientists nor even by all experimental psychologists The social sciences are rife with examples of practicing empirical scientists disaffected with the reductionism and atomism of traditional experimentalism The empirical theory and practice of four of these disaffected social scientists Lev Vygotsky James Baldwin James Gibson and Kurt Lewin is explored in this volume Each of the scientists considered here argued for a rigorously empirical method while still maintaining a clear anti reductionist stance They justified their disaffection with the dominant psychological paradigms of their respective eras in terms of a fidelity to their phenomena of study a fidelity they believed would be compromised by radical reductionism and ontological atomism The authors in this collection explore the theory and practice of these eminent researchers and from it find inspiration for contemporary social science The primary argument running through these analyses is that the social sciences should take seriously the notion of holistic empirical investigation This means among other things re establishing the indissoluble ties between theory method and procedure and resisting the manualization of research procedures It also means developing theories of relations and not simply of elemental properties Such theories would concern particular units fields or systems of relations and not be reduced to or interpreted in the terms of other systems Finally a holistic social science requires integration of the active agent into theory method and procedure an integration that points toward both participatory and emancipatory methods *Vygotsky's Psychology-Philosophy* Dorothy Robbins, 2012-12-06 You hold in your hands a new book Professor Dorothy Robbins dedicated it to one of the aspects of the cultural heritage of the famous psychologist L S Vygotsky His activity deyatelnost was multifaceted He had input into different fields of psychology its methodology psychology of art pathopsychology the psychology of child and adolescent development pedagogical psychology general psychology speech psychology and other fields Within his various activities he enriched not only psychology but a variety of different sciences academics pedagogics defectology psychiatry literary critical theory and linguistics Some famous scientists feel that he left his mark in fields of various scientific areas that did not exist during his lifetime such as psycholinguistics semiotics and cybernetics Many psychologists and linguists conduct research in the spirit of his ideas that are contained within his approach of cultural historical theory of human psychological development all created by Vygotsky as early as the 1920s and 1930s these ideas have become popular among scientists in different countries in the last decades The use of Vygotsky's theories even beyond the frame of psychology turns out to be fruitful I hope that this new book by Dorothy Robbins will help readers understand the deeper meaning of the scientific academic research undertaken by my father and

the scientific results that were obtained by him **Handbook of Crime Correlates** Lee Ellis, David P. Farrington, Anthony W. Perry, 2001-11-01 This updated edition presents a civic journalism treatment of the field of mass communication research The sine qua non of the civic journalism movement seems to center around an implicit assumption that the human mind is an evolved part in the natural world not a detached spectator as much traditional philosophy assumes Thus it has attempted to encourage journalists and members of their audiences to participate actively in civic life Applying the same idea to mass communication academics this book focuses on the empirical consequences of their work especially its possible impact on human life It argues that researchers need to connect with the broader communities in which they live and considers the impact of media research on society Features of the second edition include detailed update of research evidence concerning the media violence issue additional material concerning media ownership structures and their possible relationship to media content and effects new material focusing on the impact of tobacco and alcohol advertising updated and expanded section concerning the history of media studies and an expanded discussion of philosophical issues pertaining to theory construction This book is intended for graduate and advanced undergraduate students studying mass communication theory and related subjects such as communication theory media effects media literacy and media and society **Exploring Context in Religious Education Research** Geir Skeie, Judith Everington, Ina ter Avest, Siebren Miedema, 2013 The relevance of contextual perspectives in religious education has been growing for the last decade It has been central to the European Network for Religious Education through Contextual Approaches ENRECA the research network that has produced the present book Several members of the network have contributed to the theoretical and empirical development of contextual approaches in different publications but for the first time this has been the focus of an

entire collectively produced volume The history of the book dates back to research seminars in 2009 and 2010 and is based on the discussions in the seminar The chapters have been developed through a process of critical examination Through this process we believe to have produced a coherent and also comprehensively rich book dealing with the issue of context as a challenge and also a stimulus to religious education research and practice The chapters are presenting both empirical research and scholarly investigation into methodological and theoretical dimensions Taken together we hope that this book will contribute to the further development of contextual thinking in religious education research Or aim has not been to answer all questions but rather to pose questions and to complicate things in order to enrich the academic field of religion in education
