

Red Giants and White Dwarfs

- Red Giants and Supergiants:
 - No longer a main sequence star, the Sun will become a **red giant** in about 5 billion years.
 - As its core contracts and heats to 100 million degrees, helium nuclei will fuse into **carbon**.
 - Its outer layers will expand as the sun swells to about 2 AU in diameter.
- Becoming a White Dwarf:
 - A star like the Sun will use up its helium and its core will contract even more.
 - The Sun's outer layers will escape to space leaving behind a hot, dense core: a **"white dwarf."**
 - A white dwarf is only about the size of the Earth.

The Birth of Modern Astronomy Harm J. Habing, 2019-03-23 This richly illustrated book discusses the ways in which astronomy expanded after 1945 from a modest discipline to a robust and modern science It begins with an introduction to the state of astronomy in 1945 before recounting how in the following years initial observations were made in hitherto unexplored ranges of wavelengths such as X radiation infrared radiation and radio waves These led to the serendipitous discovery of more than a dozen new phenomena including quasars and neutron stars that each triggered a new area of research The book goes on to discuss how after 1985 the further systematic exploration of the earlier discoveries led to long term planning and the construction of new large telescopes on Earth and in Space Key scientific highlights described in the text are the detection of exoplanets 1995 the unexpected discovery of the accelerated expansion of the Universe 1999 a generally accepted model for the large scale properties of the Universe 2003 and the CDM theory 2005 that explains how the galaxies and stars of the present Universe were formed from minute irregularities in the almost homogenous gas that filled the early Universe All these major scientific achievements came at a price namely the need to introduce two new phenomena that are as yet unexplained by physics inflation and dark energy Probably the deepest unsolved question has to be Why did all of this start with a Big Bang

A History of Astronomy David

Leverington,2012-12-06 The history of astronomy is like most history a multidimensional story and when writing about a specific period the author has to decide how to handle all the developments of earlier times in order to set the scene I have done this by starting most chapters of the book with a summary of astronomical knowledge at the beginning of our chosen period together with a brief review of how such knowledge had been gained This story is not only interesting in itself but it will also assist those readers that would appreciate a brief reminder of some of the basic elements of astronomy It is also necessary to decide when to start our history Should it be the year 1900 or 1890 or should it be linked to some key development or investigation e g the discovery of the electron by J J Thomson in 1897 or the discovery of spectroscopic binary stars by Pickering and Vogel independently in 1889 or maybe the year 1890 in which Thomas Edison tried unsuccessfully to detect radio waves from the Sun and Johannes Rydberg published his formula for atomic spectra I have in fact decided to start this history at about 1890 as it was the year of publication of the Draper Memorial Catalogue of stellar spectra which together with its updates provided essential data for the understanding of stellar spectra until well into the twentieth century This date also gives a clear hundred years up to the present
