

Are Science and Religion in Conflict?

9 pages | 2202 words

Indeed, a conflict does exist between science and religion however the conflict is based on the lack of acceptance and vast misconceptions which members of either side are unwilling to let go of. The conflict between science and religion exists because there is a lack of congruence between the results achieved through scientific discovery and the beliefs required by a religion to follow. This has led to the formation of two extremes i. e. either accept faith and the doctrines required by faith to be observed or accept the rational methodologies of science.

In an article published by "The Atlantic", the author is of the opinion that solving the riddle that creates the conflict between science and religion is of utmost importance for the current generation. This is because of the reason that these two schools of thought are the most influential forces and guide the way we live our lives (Alfred). Science and religion since their inception have been in a state of continuous development. However this development has been in the opposite direction i. e. initially science studied the literature provided by religion however with the development of scientific research, certain religious concepts remained unproven because they were considered "Abstract" by science. This has led to people accepting one side to be true and the other false (Alfred). There is a conflict between science and religion however this is because of the fact that people are hesitant to study both and stick to one side. This has led to the permanent housing of misconceptions in the minds of people and is adding fuel to the fire i. e. increasing the conflict between the two ways of life.

The major reason behind the conflict between science and religion is the lack of acceptance of conclusions reached by either science or religion regarding a particular matter. If science put more light on the topic under discussion, religious scholars would deny those facts based on the grounds that the research is "blasphemous" and contradicts basic religious principles. An article by the "Times" magazine states the Christian Church and other religions including Islam focus on key aspects of human creation such as the possession of a soul by every human being or the miracles performed by saints and "Men of God".

Science however focuses on new ways of quantifying and measuring human evolution; both the concepts create a conflict (Dan, 2006). Science has been able to prove the physical existence of emotions such as passion, anger by locating it in different parts of the brain. This contradicts with the principle followed by most religions regarding the presence of a soul in every human and how that soul is free from bodily functions etc.

However acceptance of this is denied by religious scholars based on the grounds that the concept of the Afterlife is fundamental to most religions and the concept of the soul is greatly in congruence with the Afterlife (Dan, 2006). Scientific research should not be viewed as a threat to the fundamentals of a religion rather the studies should be perceived...

the scientific field in the eighteenth and nineteenth centuries In contrast to the dominant trend among historians of science Gingras argues that science and religion are social institutions that give rise to incompatible ways of knowing rooted in different methodologies and forms of knowledge and that there never was and cannot be a genuine dialogue between them Wide ranging and authoritative this new book on one of the fundamental questions of Western thought will be of great interest to students and scholars of the history of science and of religion as well as to general readers who are intrigued by the new and much publicized conversations about the alleged links between science and religion Science and Religion Claudia May, Channon Visscher, 2023-10-24 Science and Religion Perspectives Across Disciplines interweaves science technology engineering and math STEM fields with the arts humanities theology and psychology to cultivate discussion on science and religion alongside biblical interpretation This anthology is paradoxically ecumenical for it embraces unifying and disparate positions without being prescriptive or exclusive It is both synergistic and disruptive Building on this premise the Advent and Easter stories are examined through praxes from STEM theology and psychology Taken together this anthology allows for connection between disciplines by creating community in the midst of differing approaches to the study of science and religion Science and Religion in Dialogue Melville Y. A Modern Relation of Theology and Science Assisted by Emergence and Kenosis Bradford McCall, 2018-02-28 How should we attempt to understand the relationship between theology and science in the twenty first century In this book I will attempt to answer this question by examining several previous attempts to classify this relationship I also develop my personal view of the relation thereafter discussing some Catholic contributions to this project and then revisit some of my previously published material highlighting the role of panentheism therein and noting an emergent implication from the literature the resultant possibilities for God an implication that creates space for a broadly relational perspective of the process of emergence These movements allow me to argue that kenosis and emergence can add to the discussion of understanding the theology and science relationship Herein I advocate a monistic process based view of the overlapping relationship between theology and science

Religion, Science, and Democracy Lisa L. Stenmark, 2013-03-08 Despite the increasing popularity of religion and science as an academic discourse the intersection of science and religion remains a front line in an ongoing culture war The reasons for this lie in an approach to discourse that closely resembles the model of discourse promoted by John Rawls in which plural discourse such as between religion and science is based on a foundation of shared beliefs and established facts This leads to a doctrines and discoveries approach to the relationship of religion and science which focuses on their respective truth claims in an attempt to find areas of agreement This framework inherently privileges scientific perspectives which actually increases conflict between religion and science and undermines public discourse by inserting absolutes into it To the extent that the science and religion discourse adopts this approach it inadvertently increases the conflict between religion and science and limits our ability to address matters of public concern This book suggests an alternative model for discourse a disputational friendship based on the work of Hannah Arendt This approach recognizes the role that authorities and thus religion and science play in public life but undermines any attempt to privilege a particular authority because it promotes the position of the storyteller who never settles on a single story but always seeks to incorporate many particular stories into her account A disputational friendship promotes storytelling not by seeking agreement but by exploring areas of disagreement in order to create the space for more conversations and to generate more stories and additional interpretations Successful discourse between religion and science is not measured by its ability to determine truth or fact but by its ability to continually expand the discourse and promote public life and public judgment
