Long Range Ballistic Missiles:

Long-range Ballistic Missiles Eric Burgess, 1962 **Long-Range Ballistic Missile Defense in Europe** Steven A. Hildreth, 2007 Successive U S administrations have urged the creation of an anti missile system to protect against threats from rogue states The Bush Administration believes that North Korea and Iran are strategic threats and questions whether they can be deterred by conventional means The Administration has built long range missile defense bases in Alaska and California to protect against North Korean missiles The system has been tested with mixed results and questions have been raised about its effectiveness The Administration has proposed deploying a ground based mid course defense GMD element of the larger Ballistic Missile Defense System BMDS in Europe to defend against the threat of long range missiles from Iran The system would include 10 interceptors in Poland a fixed radar installation in the Czech Republic and another forward deployed radar elsewhere in the region but closer to Iran Deployment of the European GMD capability is scheduled to be completed by 2013 at a cost of 4 04 billion *The Development of Ballistic Missiles in the United States Air Force, 1945-1960* Jacob Neufeld, 1990 Following World War II the onset of nuclear weapons long range jet bombers and ballistic missiles radically changed American foreign policy and military strategy The United States Air Force led by men of far sighted vision and uncommon dedication accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles In the quarter of the century since these weapons have constituted one of the tree legs of the strategic triad the basis of America s strategy of deterring nuclear war yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile launching submarines of the U S Navy This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles It concentrates on the first generation of ballistic missiles the intercontinental Atlas and Titan and the intermediate range Thor Although the effort to develop rockets has a longer history than commonly assumed the modern history spans the relatively short era from 1945 to 1960 During this brief interval missiles advanced from drawing board to alert status where the next generation now remains poised to deter war *Conventional Prompt Global Strike (PGS) and Long-Range Ballistic Missiles (BM)* Amy F. Woolf, 2011-08 Contents 1 Intro 2 Background Rationale for the PGS Mission PGS and the U S Strategic Command Potential Targets for the PGS Mission Conventional BM and the PGS Mission 3 Plans and Programs Navy Programs Reentry Vehicle Research Conventional Trident Modification Sub Launched Intermediate Range BM Air Force Programs The FALCON Study Reentry Vehicle Research and Warhead Options Missile Options Defense Wide Conventional PGS The Conventional Strike Missile Hypersonic Test Vehicle Army Advanced Hypersonic Weapon ArcLight 4 Issues for Congress Assessing the Rationale for CPGS Reviewing the Alternatives Arms Control Issues A print on demand report *Conventional Warheads for Long-Range Ballistic Missiles* , 2009 The United States has deployed long range ballistic missiles in its strategic offensive nuclear forces for more than 40 years Recently

some have proposed that the United States deploy conventional warheads on these missiles This would provide the United States with the ability to strike promptly anywhere in the world regardless of the presence of overseas bases or nearby naval forces The Air Force and Navy have both studied the possible deployment of conventional warheads on their long range ballistic missiles The Navy sought funding in FY2003 and FY2004 for research into a reentry vehicle that would be able to maneuver when approaching its target The FY2007 Defense Budget requested 127 million to pursue the deployment of conventional warheads on Trident missiles but the 109th Congress rejected most of this request the FY2008 budget requests 162.4 million The Air Force is pursuing with DARPA research into a number of technologies that might enhance the U S long range strike capability In particular it is developing a hypersonic glide vehicle known as the Common Aero Vehicle CAV that could carry conventional munitions on modified Minuteman II or Peacekeeper missiles or it could deploy these missiles with more familiar conventional warheads This effort now known as the Conventional Strike Missile CSM could serve as a follow on to the conventional Trident modification The 110th Congress is likely to review these programs again when addressing the FY2008 budget request Many have expressed concerns about the possibility that other nations such as Russia or China might misinterpret the launch of a conventionally armed ballistic missile and conclude that they are under attack with nuclear weapons The Air Force has outlined a number of measures that might reduce this risk It plans to base these missiles along the U S coast far from bases with nuclear armed ballistic missiles It also would use consultations notifications and inspections to inform others of the difference between conventional and nuclear ballistic missiles But although these measures could address some of the concerns they are not likely to eliminate the risks of misunderstandings particularly if the United States used these missiles on short notice in a crisis The Navy would not segregate its conventional missiles but would deploy them on submarines that also carry nuclear warheads but it could still notify Russia or other nations to mitigate the possibility of misunderstandings Long range ballistic missiles can bring unique capabilities to the PGS mission But these missiles are only uniquely capable if the United States must attack promptly or within hours of the start of an unanticipated conflict In any other circumstance the United States is likely to have the time to move its forces into the region Hence when deciding to fund the development of conventional warheads for long range land based or sea based missiles and whether to deploy conventional ICBMs Congress may review whether the benefits brought by these systems outweigh the risks of misunderstandings arising from their use This report will be updated as needed

Deadly Arsenals Joseph Cirincione, Jon B. Wolfsthal, Miriam Rajkumar, 2005 Deadly Arsenals provides the most up to date and comprehensive assessment available on global proliferation dangers with a critical assessment of international enforcement efforts An invaluable resource for academics policymakers students and the media this atlas includes strategic and historical analysis maps charts and graphs of the spread of nuclear chemical and biological weapons and missile delivery systems descriptions of the weapons and regimes and policies to control them and data on countries that have wanted or have given up weapons of mass destruction A

Choice outstanding academic title from one of the premier nonproliferation research teams The new edition addresses the recent dramatic developments in Iran Iraq Libya North Korea and the nuclear black market analyzing strategic and policy implications Contents Part 1 Assessments and Weapons Part 2 Declared Nuclear Weapon States Part 3 Non NPT Nuclear Weapon States Part 4 The Two Hard Cases North Korea and Iran Part 5 Proliferation Success Missile defense additional knowledge needed in developing system for intercepting longrange missiles. , **Conventional Prompt Global Strike and Long-range Ballistic Missiles** Congressional Research Service,2015-02-06 Conventional prompt global strike CPGS weapons would allow the United States to strike targets anywhere on Earth in as little as an hour This capability may bolster U S efforts to deter and defeat adversaries by allowing the United States to attack high value targets or fleeting targets at the start of or during a conflict Congress has generally supported the PGS mission but it has restricted funding and suggested some changes in funding for specific programs CPGS weapons would not substitute for nuclear weapons but would supplement U S conventional capabilities They would provide a niche capability with a small number of weapons directed against select critical targets Some analysts however have raised concerns about the possibility that U S adversaries might misinterpret the launch of a missile with conventional warheads and conclude that the missiles carry nuclear weapons The U S Department of Defense DOD is considering a number of systems that might provide the United States with long range strike capabilities The Air Force and Navy have both considered deploying conventional warheads on their long range ballistic missiles The Navy sought to deploy conventional warheads on a small number of Trident II submarine launched ballistic missiles In FY2008 Congress rejected the requested funding for this program but the Navy has continued to consider the possibility of deploying intermediate range technologies for the prompt strike mission The Air Force and the Defense Advanced Research Projects Agency DARPA are developing a hypersonic glide delivery vehicle that could deploy on a modified Peacekeeper land based ballistic missile a system known as the conventional strike missile CSM In FY2008 Congress created a single combined fund to support research and development for the CPGS mission Congress appropriated 65 4 million for this program in FY2014 and 95 6 million in FY2015 the Obama Administration has requested 78 8 million for FY2016 When Congress reviews the budget requests for CPGS weapons it may question DOD s rationale for the mission reviewing whether the United States might have to attack targets promptly at the start of or during a conflict when it could not rely on forward based land or naval forces It might also review whether this capability would reduce U S reliance on nuclear weapons or whether as some critics have asserted it might upset stability and possibly increase the risk of a nuclear response to a U S attack This risk derives in part from the possibility that nations detecting the launch of a U S PGS weapon would not be able to determine whether the weapon carried a nuclear or conventional warhead Congress has raised concerns about this possibility in the past While most analysts expected the Air Force to take the lead in deploying a hypersonic delivery system on a modified ballistic missile a concept known as the conventional strike missile CSM tests of the hypersonic

vehicle known as the HTV 2 have not succeeded An alternative glider known as the AHW may be deployed on missiles based at sea Congress may review other weapons options for the CPGS mission including bombers cruise missiles and possibly scramjets or other advanced technologies Warheads deployed on boost glide systems would not be affected by the 2010 New START Treaty because these are new types of strategic offensive arms But those deployed in existing types of reentry vehicles on existing types of ballistic missiles would count against the treaty limits This report will be updated as needed

Missile Proliferation in the Information Age United States. Congress. Senate. Committee on Governmental Affairs. Subcommittee on International Security, Proliferation, and Federal Services,1997 Compilation of Hearings on National Security Issues United States. Congress. Senate. Committee on Governmental Affairs. Subcommittee on International Security, Proliferation, and Federal Services,1998 A Day in the Life of the BMDs , The Flight Environment of Long-range Ballistic Missiles and Glide Vehicles Kurt R. Enkenhus,1959 The flow conditions encountered in the flight of long range ballistic missiles and glide vehicles are reviewed Flow parameters were calculated using the flight trajectory equations of Eggers Allen and Niece with a simplified atmospheric model Graphs are given indicating the relationships of aerodynamic drag and heating real gas effects and rarefied gas phenomena to vehicle trajectories The vehicle trajectories in turn are approximately determined by a few fundamental parameters such as the range vehicle weight drag coefficient and in the case of glide vehicles the lift drag ratio It is concluded that rarefied gas effects are dominant in the decay of satellite orbits but are of little importance in most surface to surface missions The most severe environmental conditions are encountered in hypersonic continuum flow *Defense-related Laws (as Amended Through December 31, 2003)* United States,2004

Congress. Senate. Committee on Appropriations. Subcommittee on Department of Defense,2008 **Congressional Record** United States. Congress,2000 **The National Space Transportation Policy** ,1995 The national space transportation policy : issues for Congress. ,1995 In responding to the political and military challenges of the Cold War and the urge to explore and exploit outer space the United States developed a capable fleet of space transportation systems for carrying cargo and people into space and for ensuring a credible strategic nuclear deterrent These systems are owned and managed by the National Aeronautics and Space Administration the Department of Defense and private industry In recent years increasing federal

budget constraints commercial competition from foreign launch firms and a desire to continue an ambitious space program have created pressures within the United States to reduce the costs of access to space. Significantly lower space transportation costs would make the U S space industry more commercially competitive, foster the expansion and creation of new space markets, and ensure access to space for government payloads and manned missions. This report prepared for the House Committee on Science is the first in a broad assessment of the health and future prospects of the U S space transportation technology and industrial base. The report focuses on the Clinton Administration's National Space Transportation Policy which was released last fall. It examines administration policy in light of the implementation plans prepared by NASA, DOD, and the Transportation and Commerce Departments. As the report notes, the new policy brings a welcome measure of order to the sometimes chaotic structure of U S space transportation activities. The policy also emphasizes the important contribution private industry can make to the direction and development of U S space transportation capabilities. However, an analysis of the policy and implementation plans also raises some issues that might be of interest to Congress as it debates space transportation legislation, oversight, and funding.
