**Mondrian's Philosophy of Visual Rhythm** Eiichi Tosaki, 2017-11-15 This volume investigates the meaning of visual rhythm through Piet Mondrian s unique approach to understanding rhythm in the compositional structure of painting drawing reference from philosophy aesthetics and Zen culture Its innovation lies in its reappraisal of a forgotten definition of rhythm as stasis or composition which can be traced back to ancient Greek thought This conception of rhythm the book argues can be demonstrated in terms of pictorial strategy through analysis of East Asian painting and calligraphy with which Greek thought on rhythm has identifiable commonalities The book demonstrates how these ideas about rhythm draw together various threads of intellectual development in the visual arts that cross disparate aesthetic cultural practices As an icon of early 20th Century Modernism Mondrian s neoplasticism is a serious painterly and philosophical achievement In his painting Mondrian was deeply influenced by Theosophy which took its influence from Eastern aesthetics particularly East Asian and Indian thought However Mondrian s approach to visual rhythm was so idiosyncratic that his contribution to studies of visual rhythm is often under recognized This volume shows

that a close inspection of Mondrian's own writing, thinking and painting has much to tell scholars about how to understand a long forgotten aspect of visual rhythm. Rodin's famous criticism of photography: athlete in motion is forever frozen, can be applied to Muybridge's zoopraxiscope, the Futurists' rendition of stroboscopic images and Duchamp's *Nude Descending a Staircase*. Through a comparative study between Mondrian's painting and these seminal works, this volume initiates a new convention for the cognition of the surface of painting as visual rhythm. Mondrian's simultaneous emphasis on the static and the rhythmic is hardly fodder for a publicist. Eiichi Tosaki has taken on the challenge of elucidating Mondrian's theories of rhythm and particularly his conception of static rhythm. The result is a tour de force that will forever alter the reader's encounter with the works of Mondrian. Prof. Kathleen Higgins, *Mondrian*, Piet Mondrian, 1964, Symbolist Aesthetics and Early Abstract Art, Dee Reynolds, 1995-03-30. This innovative analysis of the role of imagination as a central concept in both literary and art criticism studies works by Rimbaud, Mallarmé, Kandinsky and Mondrian. **Design**, Thomas Hauffe, 1998. Aiming to place design developments in their broader context, this text describes the history of design from its emergence as a separate discipline around 1750 to the present. Arranged chronologically and with colour-coded pages for ease of reference, the book includes time lines and designers' biographies as well as feature spreads on notable designers and companies. There is also a detailed list of major design museums and collections. The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition, Linda Dalrymple Henderson, 2018-05-18. The long-awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art. In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception, the curved spaces of non-Euclidean geometry and most important, a higher fourth dimension of space, were central to the development of modern art. The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher-dimensional existence. That iconoclastic idea encouraged radical innovation by a variety of early twentieth-century artists ranging from French Cubists, Italian Futurists and Marcel Duchamp to Max Weber, Kazimir Malevich and the artists of De Stijl and Surrealism. In an extensive new Reintroduction, Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000. Although largely eclipsed by relativity theory beginning in the 1920s, the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s. In a remarkable turn of events, it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven-dimensional universes and computer graphics. Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller, Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak.
