**Complex Head and Neck Microvascular Surgery** Anastasiya Quimby, Sat Parmar, Rui Fernandes, 2023-10-04 Head and neck patients who undergo treatment with free tissue transfer are patients with some of the most complex perioperative needs Due to nature of the defects reconstructive surgery is complex

and often is the only available option offering an acceptable quality of life. Therefore successful recovery of these patients is of paramount importance. Whilst the surgery itself is of utmost importance, insufficient or inappropriate pre-surgical work-up and post-operative care may lead to reconstructive failures. Secondary reconstruction offers less optimal functional outcomes and may add to patient morbidity due to additional surgeries being required. This book serves as a comprehensive source of information related to the pre-intra and postoperative care of head and neck patients. It fills a critical need for a single source that addresses all aspects of perioperative management of head and neck patients.
