H.A. Bursen,2012-12-06 The subject of the following study is theories of memory The first part is a study of one broad type of theory which is very widely adhered to at this time It enjoys great popularity among neuro physiologists neuropsychologists and more generally among scientifically oriented people who have directed their attention to questions about memory Further this way of looking at the matter is not confined to scientific professionals Indeed we can find popularized versions of the view in magazines like Time and Reader s Digest So in the first part of the book I will give a presentation of the view in its general form The theory will be presented in such a way as to reveal the features which make it tempting which make it seem to be a very natural way to explain the phenomena of memory And clearly from the number of adherents the view has won it is tempting and it does seem to be to go about explaining memory After setting forth a natural way this generalized version of the theory I will next present material by various authors who hold this view This will allow the reader to get some idea of the different forms which the theory the memory trace or engram theory takes The last step is a criticism of the theory In the second part of the book the attack on trace theory will be strengthened by a further criticism **Digital**
