Extinctions Michael Hannah, 2021-09-16 Are we now entering a mass extinction event What can mass extinctions in Earth s history tell us about the Anthropocene What do mass extinction events look like and how does life on Earth recover from them The fossil record reveals periods when biodiversity exploded and short intervals when much of life was wiped out in mass extinction events In comparison with these ancient events today s biotic crisis hasn t yet reached the level of extinction to be called a mass extinction But we are certainly in crisis and current parallels with ancient mass extinction events are profound and deeply worrying Humanity s actions are applying the same sorts of pressures on similar scales that in the past pushed the Earth system out of equilibrium and triggered mass extinction events Analysis of the fossil record suggests that we still have some time to avert this disaster but we must act now *Fossil*

Discoveries Disprove Evolution Beyond A Doubt Josh Greenberger, 2012-11-27 This book shows how the very fossil record that scientists often present as proof of the validity of the theory of evolution proves the precise opposite Fossils are excellent laboratory experiments on a grand scale that assess what happened to life in the past And they prove beyond any question that the emergence and progression of life did not occur in any way remotely resembling what is depicted by the theory of evolution This may be a difficult pill for some people to swallow but it s the facts that should dictate what science is This book deals with provable facts not unverifiable conjecture
