Groups of Galaxies in the Nearby Universe Ivo Saviane, Valentin D. Ivanov, Jordanka Borissova, 2007-08-01 For every galaxy in the field or in clusters there are about three galaxies in groups The Milky Way itself resides in a group and groups can be found at high redshift The current generation of 10 m class telescopes and space facilities allows the observation of the members of nearby groups with exquisite detail and their properties can be correlated with the global properties of their host group Groups in the local Universe offer us the chance to study galaxies in environments characterized by strong interactions In the cosmological context groups trace large scale structures better than clusters and the evolution of groups and clusters appears to be related All these aspects of research on groups of galaxies are summarized in this book written by scientists working in various fields 2003 CERN-CLAF School of High-Energy Physics European Organization for Nuclear Research, 2006

2008 Comic Book Checklist & Price Guide Maggie Thompson, Brent Frankenhoff, Peter Bickford, 2007-10-08 Did you know that comic books are being promoted by noted organizations including American Library Association and many educators as a tool for engaging young readers *Relativity, Gravitation and Cosmology* Ta-Pei Cheng, 2009-11-07 Einstein's general theory of relativity is introduced in this advanced undergraduate and beginning graduate level textbook Topics include special relativity in the formalism of Minkowski's four dimensional space time the principle of equivalence Riemannian geometry and tensor analysis Einstein field equation as well as many modern cosmological subjects from primordial inflation and cosmic microwave anisotropy to the dark energy that propels an accelerating universe The author presents the subject with an emphasis on physical examples and simple applications without the full tensor apparatus The reader first learns how to describe curved spacetime At this mathematically more accessible level the reader can already study the many interesting phenomena such as gravitational lensing precession of Mercury's perihelion black holes and

cosmology The full tensor formulation is presented later when the Einstein equation is solved for a few symmetric cases Many modern topics in cosmology are discussed in this book from inflation cosmic microwave anisotropy to the dark energy that propels an accelerating universe Mathematical accessibility together with the various pedagogical devices e g worked out solutions of chapter end problems make it practical for interested readers to use the book to study general relativity and cosmology on their own

Environmental and Low-Temperature Geochemistry Peter Ryan, 2019-10-21

Environmental and Low Temperature Geochemistry presents conceptual and quantitative principles of geochemistry in order to foster understanding of natural processes at and near the earth's surface as well as anthropogenic impacts and remediation strategies. It provides the reader with principles that allow prediction of concentration, speciation, mobility, and reactivity of elements and compounds in soils, waters, sediments, and air, drawing attention to both thermodynamic and kinetic controls. The scope includes atmosphere, terrestrial waters, marine waters, soils, sediments, and rocks in the shallow crust; the temporal scale is present to Precambrian, and the spatial scale is nanometers to local, regional, and global. This second edition of *Environmental and Low Temperature Geochemistry* provides the most up-to-date status of the carbon cycle and global warming, including carbon sources, sinks, fluxes, and consequences, as well as emerging evidence for and effects of ocean acidification. Understanding environmental problems like this requires knowledge based in fundamental principles of equilibrium, kinetics, basic laws of chemistry and physics, empirical evidence, examples from the geological record, and identification of system fluxes and reservoirs that allow us to conceptualize and understand. This edition aims to do that with clear explanations of fundamental principles of geochemistry as well as information and approaches that provide the student or researcher with knowledge to address pressing questions in environmental and geological sciences. New content in this edition includes Focus Boxes, one every two or three pages, providing case study examples, e.g., methyl isocyanate in Bhopal, origins and health effects of asbestiform minerals, concise explanations of fundamental concepts, e.g., balancing chemical equations, isotopic fractionation using the K_{eq} to predict reactivity, and useful information, e.g., units of concentration, titrating to determine alkalinity, measuring redox potential of natural waters. Sections on emerging contaminants for which knowledge is rapidly increasing, e.g., perfluorinated compounds, pharmaceuticals, and other domestic and industrial chemicals. Greater attention to interrelationships of inorganic, organic, and biotic phases and processes. Descriptions, theoretical frameworks, and examples of emerging methodologies in geochemistry research, e.g., clumped C-O isotopes to assess seawater temperature over geological time, metal stable isotopes to assess source and transport processes, X-ray absorption spectroscopy to study oxidation state and valence configuration of atoms and molecules. Additional end-of-chapter problems including more quantitatively based questions. Two detailed case studies that examine fate and transport of organic contaminants, VOCs, PFCs, with data and interpretations presented separately. These examples consider the chemical and mineralogical composition of rocks, soils, and waters in the affected system, microbial influence on the decomposition of organic compounds, the effect of reduction/oxidation on transport of Fe, As, and Mn, stable isotopes and synthetic compounds as tracers of flow, geological factors that influence flow, and implications for remediation. The interdisciplinary approach and range of topics, including environmental contamination of air, water, and soil, as well as the processes that affect both natural and anthropogenic systems, make it well suited for environmental geochemistry courses at universities as well as liberal arts colleges.

Caring for Souls in a Neoliberal Age Bruce

Rogers-Vaughn, 2016-11-08 This volume offers a detailed analysis of how the current phase of capitalism is eating away at social interpersonal and psychological health Drawing upon an interdisciplinary body of research Bruce Rogers Vaughn describes an emerging form of human distress what he calls third order suffering that is rapidly becoming normative Moreover this new paradigm of affliction is increasingly entangled with already existing genres of misery such as sexism racism and class struggle mutating their appearances and mystifying their intersections Along the way Rogers Vaughn presents stimulating reflections on how widespread views regarding secularization and postmodernity may divert attention from contemporary capitalism as the material origin of these developments Finally he explores his own clinical practice which yields clues for addressing the double unconsciousness of third order suffering and outlining a vision for caring for souls in these troubling times
