Magic Molecules How Drugs Work:

Magic Molecules Susan Aldridge, 1998-09-28 All of us are drug users in the broadest sense of the word Drugs can be medicines they can be used for pleasure and they can also be used to protect our long term health It is important that we are well informed about the drugs we use how they work their benefits and their risks This book is a unique guide for the general science reader to the drugs of everyday life from the main types of medicine through to recreational drugs and food supplements It looks at how drugs interact with their targets in the body where they come from how they are developed and what drugs to expect in the future All the major pharmaceutical medicines are reviewed painkillers antibiotics anti cancer drugs anti depressants heart drugs tranquillizers and hormones However this book is much more than a consumer handbook it also conveys the fascinating science of drug discovery in an easily accessible way *Chemistry of Drugs* David E.

Newton, 2007 Discusses current research and advances in the field of pharmaceutical chemistry including drug safety designer drugs and the development of new drugs *Chemistry in the Marine Environment* R E Hester, R M Harrison, 2007-10-31 The oceans cover more than 70% of the earth's surface to an average depth of almost 4000 metres It is therefore not surprising that exchanges that occur between ocean and atmosphere exert major influences on the global climate In addition there is great variety within the expanses of the ocean including large temperature differences and enormous biodiversity brought about by the great chemical diversity within the marine environment Written by international experts in the field *Chemistry in the Marine Environment* offers a multidisciplinary and authoritative review of this important topic Included is a review of the opportunities and challenges in developing new pharmaceuticals from the sea and an examination of contamination and pollution in the marine environment which is a cause of great concern world wide The international perspective of this book will engage the interest and attention of a wide readership from chemical oceanographers to policymakers from students in environmental science to those in oceanography programmes **Stories**

of the Invisible Philip Ball, 2001 What are things made of Everything is composed of small molecules of itself and they are flying around in concentric circles and arcs and segments explains Sergeant Fottrell in Flann O'Brien's *The Dalkey Archive* Philip Ball shows that the world of the molecule is indeed a dynamic place Using the chemistry of life as a springboard he provides a new perspective on modern chemical science as a whole Living cells are full of molecules in motion communication cooperation and competition Molecular scientists are now starting to capture the same dynamism in synthetic molecular systems promising to reinvent chemistry as the central creative science of the new century Illegal
