through a range of fascinating phenomena from effects that are constant in time at one extreme such as transcranial direct current stimulation of the brain to the millimeter wave whole body scanners which are familiar to frequent flyers at the other. Along the way the author looks in depth at the dispute about power line magnetic fields and leukemia a case study in what can go wrong when dubious claims inflame unjustified fears. The debate about cell phones and brain cancer still rages today particularly for the microwave frequencies encountered with new 5G technology. Recently the so called Havana Syndrome has been attributed to microwave weapons but the underlying biophysics of such weapons is unclear. For all these encounters with electricity and magnetism the author an eminent biophysicist uses science and evidence to sort out fact from fantasy. This book is aimed at general readers who want to make sense of the mysterious and often controversial ways in which E M interacts with the human body.
