## **Magnetohydrodynamic Shock Waves:**

**Magnetohydrodynamic Shock Waves** John Edward Anderson, 1963      **The Structure of Shock Waves in Magnetohydrodynamics** Mahmud Hesaaraki, 1984 In the presence of magnetic induction and electrical fields several types of discontinuities may exist in an electrically conducting fluid These phenomena can be described by the laws of conservation of mass momentum and energy Maxwell s electromagnetic equations and Ohm s law Those discontinuities which can be characterized by the conditions that both the temperature and density change across them are different from zero are called magneto hydrodynamic shock waves This monograph is concerned with the study of these types of discontinuities

**Magnetohydrodynamics: Waves and Shock Waves in Curved Space-Time** A. Lichnerowicz, 2013-04-17 For seventy years we have known that Einstein s theory is essentially a theory of propagation of waves for the gravitational field Confusion enters however through the fact that the word wave in physics implies sometimes repetition and sometimes not This confusion is often increased by the use of Fourier transforms by which a disturbance which appears to be without repetition is resolved into periodic wave trains with all frequencies But in a general curved space time we have nothing corresponding to Fourier transforms Here we consider systematically waves corresponding to the propagation of discontinuities of physical quantities describing either fields essentially electromagnetic fields and gravitational field or the motion of a fluid or together in magnetohydrodynamics the changes in time of a field and of a fluid The main equations for the different studied phenomena constitute a hyperbolic system and the study of a formal Cauchy problem is possible We call ordinary waves the case in which the derivative of superior order appearing in the system are discontinuous at the traverse of a hypersurface the wave front we call shock waves the case where the derivatives of an order inferior by one are discontinuous at the traverse of a wave front XI xii PREFACE From 1950 many well known scientists Taub Synge Choquet B ruhat etc have studied the corresponding equations for different physical phenomena systems associated to the electromagnetic and gravitational fields to hydrodynamics and to magnetohydrodynamics      *Magnetohydrodynamic Shock Waves* J. Edward Anderson, 2003-02 Studies based on the Rankine Hugoniot relations have classified MHO shock waves as fast switch on intermediate switch off and slow Any waves found in nature must also possess steady state structures and be stable in the presence of small flow disturbances In this monograph Dr Anderson examines these criteria in relation to plane shocks for which the collision frequency is large compared with cyclotron frequency It contains a three dimensional graphic representation of shock end states and presents an exact solution for the shock adiabatic curve in a convenient form An MIT Press Research Monograph      **Magnetohydrodynamic Shock Waves in a Plasma** A. **Magnetohydrodynamics** Sergei S. Molokov,R. Moreau,H. Keith Moffatt,2007-08-26 Magnetohydrodynamics MHD studies the interaction between the flow of an electrically conducting fluid and magnetic fields It involves such diverse topics as the evolution and dynamics of astrophysical objects thermonuclear fusion metallurgy and semiconductor crystal growth etc Although the first ideas in magnetohydrodynamics appeared at the beginning of the last century the explosion in theoretical and experimental studies occurred in the 1950s 60s This state of the art book aims at revising the evolution of ideas in various branches of magnetohydrodynamics astrophysics earth and solar dynamos plasmas MHD turbulence and liquid metals and reviews current trends and challenges Magnetohydrodynamic Shock Waves in a Plasma A. L. Velikovich,M. A. Liberman,1987 Experiments on Transverse Ionizing Mhd Shock Waves Charles Fleming Stebbins,FRANK J SEILER RESEARCH LAB UNITED STATES AIR FORCE ACADEMY COLO.,1967 The jump conditions across a transverse ionizing MHD shock wave where the magnetic field is in the plane of the shock are examined The simple conservation laws in conjunction with Maxwell s laws and the equation of a state yield three jump equations in four unknowns The ionizing wave then requires an additional descriptive relationship for a unique solution to the jump equations to exist Several theories which attempt to supply this missing relationship are examined including the theory of Lyubimov and Kulikovskii and later Chu where the internal structure of the shock itself supplies the missing relationship In particular Lyubimov and Kulikovskii show for appropriate ratios of the thermal diffusivity to the magnetic diffusivity that for low speed shock waves the magnetic field compression across the shock is unity and the jump equations reduce to the ordinary Rankine Hugoniot relations For high speed shock waves the magnetic field compression is equal to the gas compression across the wave and the jump equations become exactly the magnetohydrodynamic jump relations Furthermore intermediate speed shocks experience a magnetic field compression between 1 and  $\rho_2/\rho_1$  Author On the Theory of Ionizing Magnetohydrodynamic Shock Waves William Scott Jackson,1966 **Shock Waves and Reaction—Diffusion Equations** Joel Smoller,2012-12-06 For this edition a number of typographical errors and minor slip ups have been corrected In addition following the persistent encouragement of Olga Oleinik I have added a new chapter Chapter 25 which I titled Recent Results This chapter is divided into four sections and in these I have discussed what I consider to be some of the important developments which have come about since the writing of the first edition Section I deals with reaction diffusion equations and in it are described both the work of C Jones on the stability of the travelling wave for the Fitz Hugh Nagumo equations and symmetry breaking bifurcations Section II deals with some recent results in shock wave theory The main topics

considered are L Tartar's notion of compensated compactness together with its application to pairs of conservation laws and T P Liu's work on the stability of viscous profiles for shock waves In the next section Conley's connection index and connection matrix are described these general notions are useful in constructing travelling waves for systems of nonlinear equations The final section Section IV is devoted to the very recent results of C Jones and R Gardner whereby they construct a general theory enabling them to locate the point spectrum of a wide class of linear operators which arise in stability problems for travelling waves Their theory is general enough to be applicable to many interesting reaction diffusion systems
