Magneto-optics Under Conditions Of The Integer And Fractional Quantum Hall Effects In Si MOSFET:

Magneto-optics Under Conditions of the Integer and Fractional Quantum Hall Effect in Si MOSFET I. V. Kukushkin, V. B. Timofeev, 1989 Part of a series reporting to the West on developments in Soviet physics research and which aims to provide material for research scientists who do not read Russian this first volume reviews the optical spectroscopy method for investigating 2D electron energy spectra in a transverse magnetic field under integer and fractional OHE conditions The structure of the Landau levels the oscillations of DOS peak widths and the amplitude and linear scale of the fluctuations are studied Other titles in this series include **Nonlinear Effects in Metals in the Microwave Band** **The Polarization Properties of Liquid Crystals and X ray and Electron Diffraction Study of Langmuir Blodgett Films** **X-Ray and Electron-Diffraction Study of Langmuir-Blodgett Films** L. A. Feigin, Yu. M. Lvov, V. I. Troitsky, 1989 Discusses the advances in methods of research into the structure of Langmuir Blodgett multilayers and films with the predetermined alternation of molecular layers Also included are the structural analysis of films on substrates the diffraction effects associated with very thin films and news on the latest method of determining the packing of molecules in monomolecular layers **Polarization Properties of Liquid Crystals** S. A. Pikin, M. A. Osipov, E. M. Terent'ev, 1989 This volume presents the theoretical investigations of the polarization properties of liquid crystals It describes induced polarized structures and the effects which result from the interaction between the spontaneous or induced polarization and orientational non uniformities in the media Section 2 presents the phenomenological theory of ferroelectricity in smectic C liquid crystals a symmetry analysis a discussion on free energy and a description of some effects reflecting the influence of the boundaries and external forces Sections 3 and 4 focus on the molecular statistical theory of polarizational properties Spin Supercurrent and Magnetic Relaxation in Helium-3 A. S. Borovik-Romanov, 1990 The results of experiments in which magnetization transfer at a considerable distance in ^3He B the flow of spin current along a capillary due to a gradient in the phase of the order parameter and phase slippage when a critical value of the current is reached are observed X-Ray Diffraction Study of Nematic Smectic A and C Liquid Crystals B. I. Ostrovskii, 1989 Reviews recent studies of X ray scattering phenomena in liquid crystals in particular their relationship to phase transition physics Also explored are the main approximations which are used to obtain structural information from the scattering spectre of liquid crystals and to determine the short range order in the molecule arrangement *Additional Symmetries and Exactly Solvable Models in Two Dimensional Conformal Field Theory* S. L. Lukyanov, V. A. Fateev, 1991 Dynamics Of Planetary Rings And The Prediction Of New Uranian Satellites A. M. Fridman, N. N. Gor'kavyy, 1989 **Spin Glasses and Related Problems** V. S. Dotsenko, M. V. Feigel'man, L. B. Ioffe, 1990 Three scientists from the L D Landau Institute of Theoretical Physics Moscow review recent developments in the theory of spin glasses and related strongly disordered systems They discuss in particular the problems of irreversibility and nonergodicity in the framework of the mean field theory a phase transition in three dimensional spin glasses and glass like

Peeschansky,1993 **Laser Optics of Condensed Matter** J. Birman,2012-12-06 The Third Binational USA USSR Symposium titled Laser Optics of Condensed Matter was held in Leningrad 1 June 5 June 1987 This volume contains the full text of 64 papers presented at or prepared for the Symposium in both plenary and poster sessions This Symposium reestablished the very productive series of Light Scattering Binational Symposia which were initiated in Moscow in 1975 Unfortunately there was an eight year hiatus following the Second Symposium in New York 1979 This interval caused by serious chilling of the climate of USA USSR collaboration deprived the active scientists on both sides of the opportunity to meet and interact in the active format of a conference During this eight year interval there has been very rapid and intense development of scientific activity in the general area of laser optics phenomena The development of ultrafast laser sources has permitted rapid advances in time resolved spectroscopy and ultrafast processes the field of optical bistability and strong nonlinearity became a hot topic and intense work is now underway to clarify ideas of photon localization These new developments complement many advances in the study of low dimensional systems such as surfaces new work on phase transitions and novel studies of elementary excitations such as polariton excitons in localized environments such as quantum wells and heterojunctions *Electronic Structure of Semiconductor Heterojunctions* Giorgio Margaritondo,2012-12-06 E se non che di cid son vere prove And were it not for the true evidence Per piti e piti autori che sa ranno Of many authors who will be Per i miei versi nominati altrove Mentioned elsewhere in my rhyme Non presterei alla penna 10 mana I would not lend my hand to the pen Per nota1 cid ch io vidi can temenza And describe my observations for fear ehe non fosse do altri casso e van 0 That they would be rejected and in vane Mala lor chiara e vera esperienza But these authors clear and true experience Mi assicura nel dir come persone Encourages me to report since they Degne di fede ad ogni gran sentenza Should always be trusted for their word From Dittamondo by Fazio degli UbertiJ Heterojunction interfaces the interfaces between different semiconducting materials have been extensively explored for over a quarter of a century The justification for this effort is clear these interfaces could become the building blocks of many novel solid state devices Other interfaces involving semiconductors are already widely used in technology These are for example metal semiconductor and insulator semiconductor junctions and heterojunctions In comparison the present applications of heterojunction interfaces are limited but they could potentially become much more extensive in the near future The path towards the widespread use of heterojunctions is obstructed by several obstacles *Physics Briefs* ,1994 Electronic Properties of Multilayers and Low-Dimensional Semiconductor Structures J.M. Chamberlain,L. Eaves,J.C. Portal,2012-12-06 This Advanced Study Institute on the Electronic Properties of Multilayers and Low Dimensional Semiconductor Structures focussed on several of the most

active areas in modern semiconductor physics These included resonant tunnelling and superlattice phenomena and the topics of ballistic transport quantised conductance and anomalous magnetoresistance effects in laterally gated two dimensional electron systems Although the main emphasis was on fundamental physics a series of supporting lectures described the underlying technology Molecular Beam Epitaxy Metallo Organic Chemical Vapour Deposition Electron Beam Lithography and other advanced processing technologies Actual and potential applications of low dimensional structures in optoelectronic and high frequency devices were also discussed The ASI took the form of a series of lectures of about fifty minutes duration which were given by senior researchers from a wide range of countries Most of the lectures are recorded in these Proceedings The younger members of the Institute made the predominant contribution to the discussion sessions following each lecture and in addition provided most of the fifty five papers that were presented in two lively poster sessions The ASI emphasised the impressive way in which this research field has developed through the fruitful interaction of theory experiment and semiconductor device technology Many of the talks demonstrated both the effectiveness and limitations of semiclassical concepts in describing the quantum phenomena exhibited by electrons in low dimensional structures
