Matched Field Processing For Underwater Acoustics:

Matched Field Processing for Underwater Acoustics Dr. Alexandra Tolstoy, 1993 Underwater Acoustic Data Processing Y. T. Chan, 1989-03-31 This book contains the papers that were accepted for presentation at the 1988 NATO Advanced Study Institute on Underwater Acoustic Data Processing held at the Royal Military College of Canada from 18 to 29 July 1988 Approximately 110 participants from various NATO countries were in attendance during this two week period Their research interests range from underwater acoustics to signal processing and computer science some are renowned scientists and some are recent Ph D graduates The purpose of the ASI was to provide an authoritative summing up of the various research activities related to sonar technology The exposition on each subject began with one or two tutorials prepared by invited lecturers followed by research papers which provided indications of the state of development in that specific area I have broadly classified the papers into three sections under the titles of I Propagation and Noise II Signal Processing and III Post Processing The reader will find in Section I papers on low frequency acoustic sources and effects of the medium on underwater acoustic propagation Problems such as coherence loss due to boundary interaction wavefront distortion and multipath transmission were addressed Besides the medium corrupting noise sources also have a strong influence on the performance of a sonar system and several researchers described methods of modeling these sources **Matched-field Processing for Underwater Acoustics** Alexandra Tolstoy, Oceanic Engineering Society (U.S.). Model-Based Processing for Underwater Acoustic Arrays Edmund J.

Sullivan, 2015-05-14 This monograph presents a unified approach to model based processing for underwater acoustic arrays The use of physical models in passive array processing is not a new idea but it has been used on a case by case basis and as such lacks any unifying structure This work views all such processing methods as estimation procedures which then can be unified by treating them all as a form of joint estimation based on a Kalman type recursive processor which can be recursive either in space or time depending on the application This is done for three reasons First the Kalman filter provides a natural framework for the inclusion of physical models in a processing scheme Second it allows poorly known model parameters to be jointly estimated along with the quantities of interest This is important since in certain areas of array processing already in use such as those based on matched field processing the so called mismatch problem either degrades performance or indeed prevents any solution at all Thirdly such a unification provides a formal means of quantifying the performance improvement The term model based will be strictly defined as the use of physics based models as a means of introducing a priori information This leads naturally to viewing the method as a Bayesian processor Short expositions of estimation theory and acoustic array theory are presented followed by a presentation of the Kalman filter in its recursive estimator form Examples of applications to localization bearing estimation range estimation and model parameter estimation are provided along with experimental results verifying the method The book is sufficiently self contained to serve as a guide for the application of model based array processing for the practicing engineer
