**Reintroducing Materials for Sustainable Design** Mette Bak-Andersen, 2021-05-07 Reintroducing Materials for Sustainable Design provides instrumental theory and practical guidance to bring materials back into a central role in the design process and education To create designs that are sustainable and respond to current environmental

economic and cultural concerns practitioners and educators require a clear framework for materials use in design and product manufacturing While much has been written about sustainable design over the last two decades outlining systems of sustainability and product criteria to design for material circularity requires a detailed understanding of the physical matter that constitutes products Designers must not just know of materials but know how to manipulate them and work with them creatively This book responds to the gap by offering a way to acquire the material knowledge necessary to design physical objects for sustainability It reinforces the key role and responsibility of designers and encourages designers to take back control over the ideation and manufacturing process Finally it discusses the educational practice involved and the potential implications for design education following implementation addressing didactics facilities and expertise This guide is a must read for designers educators and researchers engaged in sustainable product design and materials

Illustrated by ... Plates, Etc* George Hay (of Edinburgh.), 1832      *The Social Life of Materials* Adam Drazin, Susanne Küchler, 2020-06-08

Materials play a central role in society Beyond the physical and chemical properties of materials their cultural properties have often been overlooked in anthropological studies finished products have been perceived as social yet the materials which comprise them are considered raw or natural The Social Life of Materials proposes a new perspective in this interdisciplinary field Diverting attention from the consumption of objects the book looks towards the properties of materials and how these exist through many transformations in a variety of cultural contexts Human societies have always worked with materials However the customs and traditions surrounding this differ according to the place the time and the material itself Whether or not the material is man made materials are defined by social intervention Today these constitute one of the most exciting areas of global scientific research and innovation harboring the potential to act as key vehicles of change in the world But this materials revolution has complex social implications Smart materials are designed to anticipate our actions and needs yet we are increasingly unable to apprehend the composite materials which comprise new products Bringing

together ethnographic studies of cultures from around the world this collection explores the significance of materials by moving beyond questions of what may be created from them Instead the text argues that the materials themselves represent a shifting ground around which relationships identities and powers are constantly formed and dissolved in the act of making and remaking
