Math Anthology:

A Wealth of Numbers Benjamin Wardhaugh, 2012-04-29 Despite what we may sometimes imagine popular mathematics writing didn't begin with Martin Gardner. In fact it has a rich tradition stretching back hundreds of years. This entertaining and enlightening anthology, the first of its kind, gathers nearly one hundred fascinating selections from the past 500 years of popular math writing, bringing to life a little-known side of math history. Ranging from the late fifteenth to the late twentieth century and drawing from books, newspapers, magazines, and websites, *A Wealth of Numbers* includes recreational, classroom, and work mathematics. **Mathematics in Action** Macmillan/McGraw-Hill School Publishing Company, 1994 **Math Anthology**, 1993

Mathematics Douglas M. Campbell, John C. Higgins, 1984 Based upon the principle that graph design should be a science, this book presents the principles of graph construction. The orientation of the material is toward graphs in technical writings such as journal articles and technical reports. But much of the material is relevant for graphs shown in talks and for graphs in nontechnical publications from back cover. **Mathematics in Action** Macmillan/McGraw-Hill School Publishing Company, 1994

Strange Attractors Sarah Glaz, Joanne Growney, 2008-10-27 *Strange Attractors* is a collection of approximately 150 poems with strong links to mathematics in content, form, or imagery. The common theme is love, and the editors draw from its various manifestations: romantic love, spiritual love, humorous love, love between parents and children, mathematicians in love, love of mathematics. The poets include Li. *Math Anthology* Macmillan/McGraw-Hill School Publishing Company, 1994

Math Anthology Macmillan/McGraw-Hill School Publishing Company, 1994 **Partial Differential Equations in China** Chaohao Gu, Xiayi Ding, Chung-Chun Yang, 2012-12-06 In the past few years there has been a fruitful exchange of expertise on the subject of partial differential equations (PDEs) between mathematicians from the People's Republic of China and the rest of the world. The goal of this collection of papers is to summarize and introduce the historical progress of the development of PDEs in China from the 1950s to the 1980s. The results presented here were mainly published before the 1980s but, having been printed in the Chinese language, have not reached the wider audience they deserve. Topics covered include, among others, nonlinear hyperbolic equations, nonlinear elliptic equations, nonlinear parabolic equations, mixed equations, free boundary problems, minimal surfaces in Riemannian manifolds, microlocal analysis, and solitons. For mathematicians and physicists interested in the historical development of PDEs in the People's Republic of China. **New**

Directions in the Philosophy of Mathematics Thomas Tymoczko, 1998-02 The traditional debate among philosophers of mathematics is whether there is an external mathematical reality, something out there to be discovered, or whether mathematics is the product of the human mind. This provocative book, now available in a revised and expanded paperback edition, goes beyond foundationalist questions to offer what has been called a postmodern assessment of the philosophy of mathematics, one that addresses issues of theoretical importance in terms of mathematical experience. By bringing together essays of leading philosophers, mathematicians, logicians, and computer scientists, Thomas Tymoczko reveals an evolving effort

to account for the nature of mathematics in relation to other human activities These accounts include such topics as the history of mathematics as a field of study predictions about how computers will influence the future organization of mathematics and what processes a proof undergoes before it reaches publishable form This expanded edition now contains essays by Penelope Maddy Michael D Resnik and William P Thurston that address the nature of mathematical proofs The editor has provided a new afterword and a supplemental bibliography of recent work

The Best Writing on Mathematics 2014 Mircea Pitici, 2015 An anthology of the year's finest writing on mathematics from around the world featuring promising new voices as well as some of the foremost names in mathematics

Alcuin's Recreational Mathematics Marcel Danesi, 2024-11-01 Propositiones ad acuendos juvenes Problems to Sharpen the Young is a ninth century book written by medieval teacher and scholar Alcuin of York Today it has become one of the foundational texts in what is commonly called recreational mathematics The book has been translated in many languages and analysed from various mathematical angles and perspectives from contemporary arithmetic and geometry to the nature of sequences It is not only a collection of ingenious and challenging puzzles but the core ideas collected in this book have become major themes and branches of mathematics Here Marcel Danesi revisits all fifty three problems in Alcuin s original text providing detailed solutions and analyses Alcuin s Recreational Mathematics examines the problems in the Propositiones in easy to follow language extracting from them the notions and techniques that today constitute basic mathematics Each chapter discusses Alcuin s problems more broadly and ends with ten exploratory puzzles based on Alcuin s original problems and related themes Answers and detailed solutions are included at the back Alcuin s Recreational Mathematics demonstrates how Alcuin s Propositiones puts basic mathematical thinking on display via ingenious problems that often require outside of the box thinking constituting an original and imaginative investigation of mathematics in its essence

Storybridge to Second Language Literacy Irma-Kaarina Ghosn, 2013-09-01 Storybridge to Second Language Literacy makes a case for using authentic children s literature alternately also referred to as stories or real books as the medium of instruction in teaching English to young learners particularly in contexts where children must access general curriculum subjects in English The author first proposes theoretical foundations for the argument that illustrated children s books are superior to traditional language teaching courses in the primary school She builds the case around the motivational power of stories the language and content of quality children s literature and the potential of literature to contribute to development of second language academic literacy She then reviews research of the past thirty years that clearly supports her claim Finally she uses transcripts from real classrooms to illustrate how teachers in diverse contexts make use of stories Through the classroom vignettes a practical model of literature based instruction emerges that is adaptable to a wide range of primary school teaching contexts including English as a second language contexts in core

English countries Storybridge to Second Language Literacy compiles in one volume solid theoretical foundations for story based instruction research evidence of the past thirty years supporting the approach not currently available in a single source and extensive classroom vignettes illustrating diverse practical applications not lesson plans This makes the book valuable for anyone in the field of young learner ELT MA students in TESOL will find the book useful and will develop an understanding of why and how literature based instruction works and develop insight to guide their practice Members of TESOL Elementary Education EFL and Bilingual Education SIGs and IATEFL Young Learner SIG will be interested in the volume Instructors of teacher development courses should also find the proposed volume a valuable addition to assigned readings Each chapter is followed by Think about it questions and Try it out suggestions

Musings of the Masters

Raymond G. Ayoub, 2004-06-01 The anthology is a collection of articles contiguous to the humanities written by renowned mathematicians of the twentieth century The articles cover a variety of topics that for want of a better name shall be referred to as humanistic An important criterion thereby limiting the choice is that the articles should be accessible to the literate reader who may or may not have technical knowledge of mathematics The articles span roughly a century in time and a wide range in subject They are by mathematicians acknowledged by their peers as outstanding creators whose work has added richly to the discipline Each article is preceded by a brief biographical sketch of the author and a brief indication of the content The material is accessible to a wide audience lay as well as academic
