Egghe, 1984-09-27 This book considers convergence of adapted sequences of real and Banach space valued integrable functions emphasizing the use of stopping time techniques Not only are highly specialized results given but also elementary applications of these results The book starts by discussing the convergence theory of martingales and sub or super martingales with values in a Banach space with or without the Radon Nikodym property Several inequalities which are of use in the study of the convergence of more general adapted sequence such as uniform amarts mils and pramarts are proved and sub and superpramarts are discussed and applied to the convergence of pramarts Most of the results have a strong relationship with or in fact are characterizations of topological or geometrical properties of Banach spaces The book will interest research and graduate students in probability theory functional analysis and measure theory as well as proving a useful textbook for specialized courses on martingale theory     **Mean Field Games** Yves Achdou, Pierre Cardaliaguet, François Delarue, Alessio Porretta, Filippo Santambrogio, 2021-01-19 This volume provides an introduction to the theory of Mean Field Games suggested by J M Lasry and P L Lions in 2006 as a mean field model for Nash equilibria in the strategic interaction of a large number of agents Besides giving an accessible presentation of the main features of mean field game theory the volume offers an overview of recent developments which explore several important directions from partial differential equations to stochastic analysis from the calculus of variations to modeling and aspects related to numerical methods Arising from the CIME Summer School Mean Field Games held in Cetraro in 2019 this book collects together lecture notes prepared by Y Achdou with M Lauri re P Cardaliaguet F Delarue A Porretta and F Santambrogio These notes will be valuable for researchers and advanced graduate students who wish to approach this theory and explore its connections with several different fields in mathematics     **Dynamics, Games and Science I** Mauricio Matos

Peixoto,Alberto Adrego Pinto,David A. Rand,2011-03-29 Dynamics Games and Science I and II are a selection of surveys and research articles written by leading researchers in mathematics The majority of the contributions are on dynamical systems and game theory focusing either on fundamental and theoretical developments or on applications to modeling in biology economics engineering finances and psychology The papers are based on talks given at the International Conference DYNA 2008 held in honor of Mauricio Peixoto and David Rand at the University of Braga Portugal on September 8 12 2008 The aim of these volumes is to present cutting edge research in these areas to encourage graduate students and researchers in mathematics and other fields to develop them further *Stochastic and Differential Games* Martino Bardi,T.E.S.

Raghavan,T. Parthasarathy,2012-12-06 The theory of two person zero sum differential games started at the beginning of the 1960s with the works of R Isaacs in the United States and L S Pontryagin and his school in the former Soviet Union Isaacs based his work on the Dynamic Programming method He analyzed many special cases of the partial differential equation now called Hamilton Jacobi Isaacs briefly HJI trying to solve them explicitly and synthesizing optimal feedbacks from the solution He began a study of singular surfaces that was continued mainly by J Breakwell and P Bernhard and led to the explicit solution of some low dimensional but highly nontrivial games a recent survey of this theory can be found in the book by J Lewin entitled *Differential Games* Springer 1994 Since the early stages of the theory several authors worked on making the notion of value of a differential game precise and providing a rigorous derivation of the HJI equation which does not have a classical solution in most cases we mention here the works of W Fleming A Friedman see his book *Differential Games* Wiley 1971 P P Varaiya E Roxin R J Elliott and N J Kalton N N Krasovskii and A I Subbotin see their book *Positional Differential Games* Nauka 1974 and Springer 1988 and L D Berkovitz A major breakthrough was the introduction in the 1980s of two new notions of generalized solution for Hamilton Jacobi equations namely viscosity solutions by M G Crandall and P L

*Zero-Sum Discrete-Time Markov Games with Unknown Disturbance Distribution* J. Adolfo Minjárez-Sosa,2020-01-27 This SpringerBrief deals with a class of discrete time zero sum Markov games with Borel state and action spaces and possibly unbounded payoffs under discounted and average criteria whose state process evolves according to a stochastic difference equation The corresponding disturbance process is an observable sequence of independent and identically distributed random variables with unknown distribution for both players Unlike the standard case the game is played over an infinite horizon evolving as follows At each stage once the players have observed the state of the game and before choosing the actions players 1 and 2 implement a statistical estimation process to obtain estimates of the unknown distribution Then independently the players adapt their decisions to such estimators to select their actions and construct their strategies This book presents a systematic analysis on recent developments in this kind of games Specifically the theoretical foundations on the procedures combining statistical estimation and control techniques for the construction of strategies of the players are introduced with illustrative examples In this sense the book is an essential reference for theoretical and applied researchers
