International Handbook of Mathematics Education Alan J. Bishop, 1996 This Handbook presents an overview and analysis of the international state of the field of mathematics education at the end of the 20th century. The more than 150 authors, editors, and chapter reviewers involved in its production come from a range of countries and cultures. They have created a book of 36 original chapters in four sections surveying the variety of practices and the range of disciplinary interconnections which characterise the field today and providing perspectives on the study of mathematics education for the 21st century. It is first and foremost a reference work and will appeal to anyone seeking up to date knowledge about the main developments in mathematics education. These will include teachers, student teachers, and student researchers starting out on a serious study of the subject, as well as experienced researchers, teacher educators, educational policy makers, and curriculum developers who need to be aware of the latest areas of knowledge development. [XSLT Cookbook](#) Sal Mangano, 2002 Critical for converting XML documents and extremely versatile, the XSLT language nevertheless has complexities that can be daunting. The XSLT Cookbook is a collection of hundreds of solutions to problems that Extensible Stylesheet Language Transformations (XSLT) developers regularly face. The recipes range from simple string manipulation and mathematical processing to more complex topics like extending XSLT testing and debugging, XSLT stylesheets, and graphics creation with SVG. Recipes can be run directly or tweaked to fit your particular application's needs more precisely. Each recipe walks through a problem and a solution with explanations of the choices made and techniques used in creating that solution, and many recipes include alternate solutions and explore issues like convenience and performance. Topics covered include String manipulation, Mathematical processing, Date and time handling, Interactions between calendar systems, Selecting content in source documents, Efficient tree manipulation, Conversions from XML to plain text, Tweaking XML documents with stylesheets, Using XSLT to query XML documents, Generating HTML with XSLT, Creating charts and graphs.

with SVG and XSLT Generating C and XSLT code using XSLT Processing Visio documents in XSLT Working with XML Topic Maps XTM Using XSLT to create SOAP documentation from WSDL Extending XSLT with additional functions Embedding XSLT in other processing Testing and debugging XSLT stylesheets Creating generic XSLT processors which work on many XML vocabularies The XSLT Cookbook provides an ideal companion both for developers still figuring out XSLT's template based approach who want to learn by example and for developers who know XSLT and want a collection of quickly reusable recipes XSLT frequently offers a number of ways to perform a transformation and the best solution may not always be the most straightforward The recipes in this Cookbook demonstrate and explain XSLT's template based logic a frequent stumbling block for developers new to XSLT Among the variety of XSLT books now available none has the explicit solution oriented approach of this Cookbook
