Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors *The Future of Assessment* Carol Anne Dwyer, 2017-09-25 text This volume stems from the 2003 Educational Testing Service Invitational

Conference that convened leading scholars and practitioners from education psychology economics statistics and public policy to discuss the important topic of measurement and accountability The chapters cover all significant aspects of the current accountability scene with careful but not exclusive attention to the No Child Left Behind act Written by nationally recognized scholars with a mandate to write in a non technical style this volume will appeal to anyone seriously interested in school reform and the educational accountability movement Mathematics and Science Curriculum Programs ,2002
