This graduate textbook covers those topics in statistical theory essential for students preparing for work on a Ph D degree in statistics The first chapter provides a quick overview of concepts and results in measure theoretic probability theory that are useful in statistics while the second introduces some fundamental concepts in statistical decision theory and inference The remaining chapters contain detailed studies on such important topics as unbiased estimation parametric estimation nonparametric estimation hypothesis testing and confidence sets A large number of exercises in each chapter provide not only practice problems for students but also many additional results In addition to the classical results that are typically covered in a textbook of this level this book introduces some topics in modern statistical theory that have been developed in recent years such as Markov chain Monte Carlo quasi likelihoods empirical likelihoods statistical functionals generalized estimation equations the jackknife and the bootstrap

Applied Multivariate Data Analysis J.D. Jobson, 2012-12-06

A Second Course in Statistics The past decade has seen a tremendous increase in the use of statistical data analysis and in the availability of both computers and statistical software Business and government professionals as well as academic researchers are now regularly employing techniques that go far beyond the standard two semester introductory course in statistics Even though for this group of users short courses in various specialized topics are often available there is a need to improve the statistics training of future users of statistics while they are still at colleges and universities In addition there is a need for a survey reference text for the many practitioners who cannot obtain specialized courses With the exception of the statistics major most university students do not have sufficient time in their programs to enroll in a variety of specialized one semester courses such as data analysis linear models experimental design multivariate methods contingency tables logistic regression and so on There is a need for a second survey course that covers a wide variety of these techniques in an integrated fashion It is also important that this second course combine an overview of theory with an opportunity to practice including the use of statistical software and the interpretation of results obtained from real data
