Parallel Image Processing:

Parallel Image Processing T. Bräunl, S. Feyrer, W. Rapf, M. Reinhardt, 2013-04-17 This book developed out of a series of publications in the area of image processing with massively parallel algorithms The topic of image processing is a particularly promising area for the use of synchronous massively parallel or data parallel computer systems which work according to the SIMD principle single instruction multiple data While the era of large SIMD super computers has passed SIMD systems have come back as dedicated vision subsystems and will soon be found even in embedded systems In comparison to conventional sequential implementations of basic image operations this book illustrates the intrinsic parallelism which is almost always present in image processing By utilising parallel algorithms it is even possible to illustrate operations in a simpler and easier to understand way than for the sequential case The presentation method chosen for this book assumes that short terse excerpts of program code will significantly enhance the understanding of the material e g of image operations while longer listings are more likely to distract from the topic For this reason each chapter will not only define and explain the central image processing algorithms with the help of examples but will also give an excerpt of a massively parallel program For image processing this means that at least virtually there should be one processor available for each pixel The mapping onto a smaller number of existing compilers and as of using real processors is done transparently the such is not interest here *Parallel Image Processing* M Nivat, Ahmed Saoudi, Patrick S P Wang, 1992-10-29 Contents Three Dimensional Object Pattern Representation by Array Grammars P S P Wang Stochastic Puzzle Grammars R Siromoney et al Parallel Recognition of High Dimensional Images M Nivat A Saoudi Two Dimensional Uniquely Parsable Isometric Array Grammars Y Yamamoto K Morita Replicated Image Algorithms and Their Analyses on SIMD Machines P J Narayanan L S Davis The Depth and Motion Analysis Machine O D Faugeras et al Image Analysis on Massively Parallel Computers An Architecture Point of View A M rigot B Zavidovique Parallel Algorithm for Colour Texture Generation Using the Random Neural Network Model V Atalay E Gelenbe and other papers Readership Computer scientists keywords *Parallel and Distributed Methods for Image Processing*, 1998 **Parallel Image Analysis: Theory And Applications** L S

Multicomputers and Image Processing Kendall Preston, 1982-01-01 Multicomputers and Image Processing Algorithms and Programs is the second of a set presenting papers from the third meeting held in Madison Wisconsin on May 27 30 1981 The workshop explores the large and powerful multicomputer arrays and networks with particular emphasis on the related aspects of developing algorithms and programs for multicomputer architectures Separating 33 papers into chapters this book

reflects the three major aspects of the problem user algorithms and programs higher level languages and multicomputer architectures The first chapters present specific larger structure as well as whole program algorithms and their respective applications Other chapters describe the important high level programming of Fortran based language for the massively parallel processors and the set theory based language for expressing the structural image processing and perceptual operations effected by Cytocomputer and other cellular array motivated architectures The concluding chapters examine several major types of computer architectures that are being developed for large parallel serial multicomputer systems This book is of great value to computer programmers and scientists

Vector and Parallel Processing - VECPAR 2000 Jose M.L.M. Palma,Jack Dongarra,Vicente Hernandez,2003-06-29 This book is the nal outcome of VECPAR 2000 4th International Meeting on Vector and Parallel Processing VECPAR constitutes a series of conferences which have been organized by the Faculty of Engineering of the University of Porto since 1993 with the main objective of disseminating new knowledge on parallel computing Readership of This Book The book is aimed at an audience of researchers and graduate students in a broad range of scientific areas including not only computer science but also applied mathematics and numerical analysis physics and engineering Book Plan From a total of 66 papers selected on the basis of extended abstracts for presentation at the conference a subset of 34 papers were chosen during a second review process leading to their inclusion in the book together with the invited talks The book contains a total of 40 papers organized into 6 chapters where each may appeal to people in different but still related scientific areas All chapters with the exception of Chapter 6 are initiated by a short text providing a quick overview of the organization and papers in the chapter The 13 papers in Chapter 1 cover the aspects related to the use of multiple processors Operating systems languages and software tools for scheduling and code transformation are the topics included in this chapter initiated by the talk on computing over the Internet entitled Grid Computing by Ian Foster Parallel and Distributed Algorithms for High-Speed Image Processing ,2000 Typical desktop workstations can be a severe bottleneck in the viewing and enhancement of imagery data Due to the nature of many image processing algorithms an effective method for alleviating this problem is through parallelism Parallel hardware can come in many forms from small clusters of workstations and workstations with many processors to dedicated hardware containing 10 s 100 s and 1000 s of processing nodes One of the challenges is developing a portable parallel image processing library in such a potentially diverse environment These issues led to the development of a Parallel Image Processing Toolkit PIPT The toolkit hides the detail of parallelization from the users of the PIPT and provides a uniform programming interface In developing the toolkit the issues of advanced data handling load balancing and parallel visualization were addressed In addition a specific computationally expensive High Resolution Video Stills algorithm was

implemented within the PIPT The important contributions that resulted from this work transcend the individual tasks that were undertaken First the general approach that was taken to implement the PIPT illustrates several important principles for the design and implementation of general purpose parallel libraries in this regard the PIPT design can serve as a design pattern for an extensible parallel library Second the design pattern of the current implementation of the PIPT contains some notable attempts at programming image processing tasks in a generic fashion
