

A sample of Parallel Substitution Algorithm (PSA)

PSA $\Phi\sigma$ of addition of many positive binary values.

W – is a 2D rectangular table with cells enumerated by pairs of numbers in accordance with left coordinate system (i – abscissa, j – ordinate), $m = \langle i, j \rangle$. The digits of binary values stored in rows of the table. The bottom row must contain only zeros. The least significant digits are in the rightmost column. PSA $\Phi\sigma$ contains two parallel substitutions:

$$\Phi_{\sigma} = \begin{cases} \Theta_1^{\sigma} : \{ (1, \langle i, j \rangle) (1, \langle i, j+1 \rangle) (0, \langle i+1, j \rangle) \} * \{ (0, \langle i, j-1 \rangle) (0, \langle i+1, j-1 \rangle) \} \rightarrow \\ \{ (0, \langle i, j \rangle) (0, \langle i, j+1 \rangle) (1, \langle i+1, j \rangle) \}; \\ \Theta_2^{\sigma} : \{ (1, \langle i, j \rangle) (0, \langle i, j+1 \rangle) \} * \{ (0, \langle i, j-1 \rangle) \} \rightarrow \{ (0, \langle i, j \rangle) (1, \langle i, j+1 \rangle) \}. \end{cases}$$

Graphical representation of algorithm

Remarks

1. The relative positions of cells in parallel substitution commands are set by computable functions, which are shift functions in this sample (shown in angle brackets) In this case the command has a graphical representation (Fig. a).
2. The part of left side of command after * is a context, that is an unchangeable part of command.
3. One step of execution of *PSA $\Phi\sigma$* to table W is shown at Fig b. The algorithm is executed while at least one substitution is applicable. The result will be obtained in the top row of the table.

Parallel Substitution Algorithm:

Parallel Substitution Algorithm Svetlana Mikha?lovna Achasova,1994 Parallel Substitution Algorithm PSA is a new model for distributed cellular computations It provides a concise mapping of distributed computation processes into cellular arrays A PSA is specified by a set of parallel substitutions operating over a cellular array Two concepts make PSA a powerful tool for modelling cellular computations 1 naming functions which allow the specification of any type of interactions in the computation space 2 a context which serves to represent control of a computational process in time The foundation of PSA theory comprises validity conditions of computations in the synchronous and asynchronous modes space time space space 2D 3D and global local equivalent transformations of PSAs composition and decomposition of PSAs and interpretation of PSAs with automata nets On the basis of the PSA theory a variety of tools and techniques is developed for designing algorithmic oriented cellular VLSI and optical architectures Parallel Processing and Parallel Algorithms Seyed H Roosta,2012-12-06

Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel processing structures can be employed The concept of parallel processing is a departure from sequential processing In sequential computation one processor is involved and performs one operation at a time On the other hand in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing From the practical point of view this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms Parallel processing involves utilizing several factors such as parallel architectures parallel algorithms parallel programming languages and performance analysis which are strongly interrelated In general four steps are involved in performing a computational problem in parallel The first step is to understand the nature of computations in the specific application domain

BOOK JACKET Functional Programming, Glasgow 1991 Rogardt Heldal, Carsten K. Holst, Philip Wadler, 2012-12-06 The Glasgow functional programming group has held a workshop each summer since 1988 The entire group accompanied by a selection of colleagues from other institutions retreats to a pleasant Scottish location for a few days Everyone speaks briefly enhancing coherence cross fertilisation and camaraderie in our work The proceedings of the first workshop were published as a technical report Demand for this was large enough to encourage wider publication and

subsequent proceedings have been published in the Springer Verlag Workshops in Computing series These are the proceedings of the meeting held 12-14 August 1991 in Portree on the Isle of Skye A preliminary proceedings was prepared in advance of the meeting Most presentations were limited to a brief fifteen minutes outlining the essentials of their subject and referring the audience to the pre-print proceedings for details Papers were then refereed and rewritten and you hold the final results in your hands A number of themes emerged at this year's workshop including relational algebra and its application to hardware design partial evaluation and program transformation implementation techniques and strictness analysis We were especially pleased to see applications of functional programming emerge as a theme One of the sessions was devoted to a lively discussion of applications and was greatly enhanced by our industrial participants The workshop was organised by Kei Davis Cordelia Hall Rogardt Heldal Carsten Kehler Holst John Hughes John O'Donnell and Satnam Singh all from the University of Glasgow

This volume records state of the art research conducted in some 22 laboratories who have worked together within EC ESPRIT Basic Research Action 3199 up to 1992. The topics cover 1 Active optical logic and switching devices embracing new materials nonlinear and electrooptic mechanisms as well as advanced device fabrication. These devices cover the range from all optical nonlinear interferometer structures through hybrid optical electronic modulators to integrated emitter receiver structures. 2 The latest state of optical interconnect technology embracing diffractive optics binary and multi level phase gratings holographic space variant elements and micro refractive optics. 3 Contributions on optical information processing architecture and demonstrator projects. The materials base ranges from silicon to II VI materials with the realisation of pn junction devices in ZnSe. The research reported here lays the basis for long term progress in devices for information processing.

Languages and Compilers for Parallel Computing Utpal Banerjee, 1993-12-08. The articles in this volume are revised versions of the best papers presented at the Fifth Workshop on Languages and Compilers for Parallel Computing held at Yale University August 1992. The previous workshops in this series were held in Santa Clara 1991 Irvine 1990 Urbana 1989 and Ithaca 1988. As in previous years a reasonable cross section of some of the best work in the field is presented. The volume contains 35 papers mostly by authors working in the U S or Canada but also by authors from Austria Denmark Israel Italy Japan and the U K.

Algorithms and Order Ivan Rival, 2012-12-06. This volume contains the texts of the principal survey papers presented at ALGORITHMS and ORDER held at Ottawa Canada from June 1 to June 12 1987. The conference was supported by grants from the N A T O Advanced Study Institute programme the University of Ottawa and the Natural Sciences and Engineering Research Council of Canada. We are grateful for this considerable support. Over fifty years ago the Symposium on Lattice Theory in Charlottesville U S A proclaimed the vitality of ordered sets. Only twenty years later the Symposium on Partially Ordered Sets and Lattice Theory held at Monterey U S A had solved many of the problems that had been originally posed. In 1981 the Symposium on Ordered Sets held at Banff Canada continued this tradition. It was marked by a landmark volume containing twenty three articles on almost all current topics in the theory of ordered sets and its applications. Three years after Graphs and Orders also held at Banff Canada aimed to document the role of graphs in the theory of ordered sets and its applications. Because of its special place in the landscape of the mathematical sciences order is especially sensitive to new trends and developments. Today the most important current in the theory and application of order springs from theoretical computer science. Two themes of computer science lead the way. The first is data structure. Order is common to data structures.

Simulating Complex Systems by Cellular Automata Alfons G. Hoekstra, Jiri Kroc, Peter M.A. Slood, 2010-06-13 Deeply rooted in fundamental research in Mathematics and Computer Science Cellular Automata CA are recognized as an intuitive modeling paradigm for Complex Systems Already very basic CA with extremely simple micro dynamics such as the Game of Life show an almost endless display of complex emergent behavior Conversely CA can also be designed to produce a desired emergent behavior using either theoretical methodologies or evolutionary techniques Meanwhile beyond the original realm of applications Physics Computer Science and Mathematics CA have also become work horses in very different disciplines such as epidemiology immunology sociology and finance In this context of fast and impressive progress spurred further by the enormous attraction these topics have on students this book emerges as a welcome overview of the field for its practitioners as well as a good starting point for detailed study on the graduate and post graduate level The book contains three parts two major parts on theory and applications and a smaller part on software The theory part contains fundamental chapters on how to design and or apply CA

for many different areas In the applications part a number of representative examples of really using CA in a broad range of disciplines is provided this part will give the reader a good idea of the real strength of this kind of modeling as well as the incentive to apply CA in their own field of study Finally we included a smaller section on software to highlight the important work that has been done to create high quality problem solving environments that allow to quickly and relatively easily implement a CA model and run simulations both on the desktop and if needed on High Performance Computing infrastructures
