Parallel Algorithms For Machine Intelligence And Vision:

Parallel Algorithms for Machine Intelligence and Vision Vipin Kumar,P.S. Gopalakrishnan,Laveen N. Kanal,2012-12-06 Recent research results in the area of parallel algorithms for problem solving search natural language parsing and computer vision are brought together in this book The research reported demonstrates that substantial parallelism can be exploited in various machine intelligence and vision problems The chapter authors are prominent researchers actively involved in the study of parallel algorithms for machine intelligence and vision Extensive experimental studies are presented that will help the reader in assessing the usefulness of an approach to a specific problem Intended for students and researchers actively involved in parallel algorithms design and in machine intelligence and vision this book will serve as a valuable reference work as well as an introduction to several research directions in these areas **Parallel Algorithms for Computer Vision on the Connection Machine** Massachusetts Institute of Technology. Artificial Intelligence Laboratory,1986 **Parallel Computer Architectures** Arndt Bode,Mario Dal Cin,2013-12-11 Parallel computer architectures are now going to real applications This fact is demonstrated by the large number of application areas covered in this book see section on applications of parallel computer architectures The applications range from image analysis to quantum mechanics and data bases Still the use of parallel architectures poses serious problems and requires the development of new techniques and tools This book is a collection of best papers presented at the first workshop on two major research activities at the Universitiit Erlangen Niirnberg and Technis che Universitiit Miinchen At both universities more than 100 researchers are working in the field of multiprocessor systems and network configurations and methods and tools for parallel systems Indeed the German Science Founda tion Deutsche Forschungsgemeinschaft has been sponsoring the projects under grant numbers SFB 182 and SFB 342 Research grants in the form of a Sonder forschungsbereich are given to selected German Universities in portions of three years following a thoroughful reviewing process The overall duration of such a research grant is restricted to 12 years The initiative at Erlangen Niirnberg was started in 1987 and has been headed since this time by Prof Dr H Wedekind Work at TU Miinchen began in 1990 head of this initiative is Prof Dr A Bode The authors of this book are grateful to the Deutsche Forschungsgemeinschaft for its continuing support in the field of research on parallel processing The first section of the book is devoted to hardware aspects of parallel systems **System Modelling and Optimization** Jacques Henry,Jean-Pierre Yvon,2006-04-11 This conference organized jointly by UTC and INRIA is the biennial general conference of the IFIP Technical Committee 7 System Modelling and Optimization and reflects the activity of its members and working groups These proceedings contain a collection of papers 82 from the more than 400 submitted as well as the plenary lectures presented at the conference **Encyclopedia of Microcomputers** Allen Kent,James G. Williams,1993-11-18 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work

details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology **Annual ACM Symposium on Parallel Algorithms and Architectures** ,1994

Encyclopedia of Computer Science and Technology Allen Kent,James G. Williams,1992-10-29 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities Each article in the Encyclopedia features current developments and trends in computers software vendors and applications extensive bibliographies of leading figures in the field such as Samuel

Alexander John von Neumann and Norbert Wiener and in depth analysis of future directions **Minimax and Applications** Ding-Zhu Du,Panos M. Pardalos,2013-12-01 Techniques and principles of minimax theory play a key role in many areas of research including game theory optimization and computational complexity In general a minimax problem can be formulated as $\min \max_{y \in Y} f(x,y)$ where $f(x,y)$ is a function defined on the product of X and Y spaces There are two basic issues regarding minimax problems The first issue concerns the establishment of sufficient and necessary conditions for equality $\min \max_{y \in Y} f(x,y) = \max_{x \in X} \min_{y \in Y} f(x,y)$ The classical minimax theorem of von Neumann is a result of this type Duality theory in linear and convex quadratic programming interprets minimax theory in a different way The second issue concerns the establishment of sufficient and necessary conditions for values of the variables x and y that achieve the global minimax function value $\min \max_{y \in Y} f(x,y)$ There are two developments in minimax theory that we would like to mention

Parallel Architectures and Parallel Algorithms for Integrated Vision Systems Alok N. Choudary,J.H. Patel,2012-12-06 Computer vision is one of the most complex and computationally intensive problem Like any other computationally intensive problems parallel processing has been suggested as an approach to solving the problems in computer vision Computer vision employs algorithms from a wide range of areas such as image and signal processing advanced mathematics graph theory databases and artificial intelligence Hence not only are the computing requirements for solving vision problems tremendous but they also demand computers that are efficient to solve problems exhibiting vastly different characteristics With recent advances in VLSI design technology Single Instruction Multiple Data SIMD massively parallel computers have been proposed and built However such architectures have been shown to be useful for solving a very limited subset of the problems in vision Specifically algorithms from low level vision that involve computations closely mimicking the architecture and require simple control and computations are suitable for massively parallel SIMD computers An Integrated Vision System IVS involves computations from low to high level vision to be executed in a systematic fashion and repeatedly The interaction between computations and information dependent nature of the computations suggests that architectural requirements for computer vision systems can not be satisfied by massively parallel SIMD computers

Machine Intelligence A. Gomersall, 2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included

Topological Algorithms for Digital Image Processing T.Y. Kong, A. Rosenfeld, 1996-07-17 Basic topological algorithms are the subject of this new book It presents their underlying theory and discusses their applications Due to the wide variety of topics treated in the seven chapters no attempt has been made to standardize the notation and terminology used by the authors Each chapter however is self contained and can be read independently of the others Some of the basic terminology and fundamental concepts of digital topology are reviewed in the appendix which also describes important areas of the field A bibliography of over 360 references is also provided The notations and terminologies used in this book will serve to introduce readers to the even wider variety that exists in the voluminous literature dealing with topological algorithms
