Parallel Computing:

Accelerating Computational Science and Engineering (CSE) M. Bader,A. Bode,H.-J. Bungartz,2014-03-31 Parallel computing has been the enabling technology of high end machines for many years Now it has finally become the ubiquitous key to the efficient use of any kind of multi processor computer architecture from smart phones tablets embedded systems and cloud computing up to exascale computers _x000D_ This book presents the proceedings of ParCo2013 the latest edition of the biennial International Conference on Parallel Computing held from 10 to 13 September 2013 in Garching Germany The conference focused on several key parallel computing areas Themes included parallel programming models for multi and manycore CPUs GPUs FPGAs and heterogeneous platforms the performance engineering processes that must be adapted to efficiently use these new and innovative platforms novel numerical algorithms and approaches to large scale simulations of problems in science and engineering _x000D_ The conference programme also included twelve mini symposia including an industry session and a special PhD Symposium which comprehensively represented and intensified the discussion of current hot topics in high performance and parallel computing These special sessions covered large scale supercomputing novel challenges arising from parallel architectures multi manycore heterogeneous platforms FPGAs multi level algorithms as well as multi scale multi physics and multi dimensional problems _x000D_ It is clear that parallel computing including the processing of large data sets Big Data will remain a persistent driver of research in all fields of innovative computing which makes this book relevant to all those with an interest in this field *Sparse Arrays for Radar, Sonar, and Communications* Moeness G. Amin,2024-01-11 Specialized resource providing detailed coverage of recent advances in theory and applications of sparse arrays *Sparse Arrays for Radar Sonar and Communications* discusses various design approaches of sparse arrays including those seeking to increase the corresponding one dimensional and two dimensional virtual array apertures as well as others that configure the arrays based on solutions of constrained minimization problems The latter includes statistical bounds and signal to interference and noise ratio in this respect the book utilizes the recent strides made in convex optimizations and machine learning for sparse array configurability in both fixed and dynamic environments Similar ideas are presented for sparse array waveform design The book also discusses the role of sparse arrays in improving target detection and resolution in radar improving channel capacity in massive MIMO and improving underwater target localization in sonar It covers different sparse array topologies and provides various approaches that deliver the optimum and semi optimum sparse array transceivers Edited by a world leading expert in Radar and Signal Processing and contributed to by world class

researchers in their respective fields Sparse Arrays for Radar Sonar and Communications covers topics including Utilizing sparse arrays in emerging technologies and showing their offerings in various sensing and communications applications Applying sparse arrays to different environments and obtain superior performances over conventional uniform arrays Solving the localization beamforming and direction finding problems using non uniform array structures for narrowband and wideband signals Designing sparse array structures for both stationary and moving platforms that produce physical and synthesized array apertures Using deep neural networks that learn the underlying complex nonlinear model and output the sparse array configuration using representations of the input data spatio temporal observations Solving for optimum sparse array configurations and beamforming coefficients in sensing using iterative convex optimization methods Providing complete coverage of the recent considerable progress in sparse array design and configurations Sparse Arrays for Radar Sonar and Communications is an essential resource on the subject for graduate students and engineers pursuing research and applications in the broad areas of active passive sensing and communications
