The Parameter of Aspect C.S. Smith, 1991-10-31 Smith linguistics U of Texas presents a unified theory of aspect within Universal Grammar She provides an unusual combination of syntactic semantic and pragmatic approaches to a single domain and gives detailed linguistic analyses of the very different aspect systems in English French Mandarin Chinese Navajo and Russian After presenting her evidence she develops a formal semantic treatment in the framework of discourse representation theory with an explicit procedure for computing aspect meaning from syntactical surface structure Among her innovations are a principled account of the interaction between viewpoint and situation type a level of pragmatic analysis at which contrastive and inferred meanings are stated and a default analysis of sentences that are neither perfective nor imperfective in viewpoint No date is noted for the first edition but the second incorporates further developments of the two component theory such as new treatments of boundedness and dynamism and a general account of aspect shifts Annotation copyrighted by Book News Inc Portland OR
