Young,2012-12-06 Approximately five years have elapsed since the Conference on Tick borne Diseases and their Vectors Wilde 1978 University of Edinburgh was held at the Centre for Tropical Veterinary Medicine in Edinburgh

Theileriosis was one of the main topics at that Conference and some 20 scientific presentations were given. Also in the same year a Workshop on Theileriosis was held at the Kenyatta Conference Centre in Nairobi. Henson Campbell 1977 IDRC Ottawa. Both of these meetings provided a valuable updating of theilerial diseases and the Proceedings have been a constant source of reference for scientists in the ensuing years. The meetings played a significant role in setting the scene for a number of important advances which have been made since then. In February of this year attention was focused on these advances when nearly 200 scientists from over 30 countries were assembled at the International Laboratory for Research on Animal Diseases in Nairobi for the international conference on Advances in the Control of Theileriosis. The interest and concern shown in this subject has now grown to the extent that more than 70 scientific presentations were given over the course of a very busy week. An important facet of the Conference was the attention given to the control of Theileriosis since this must be the ultimate aim of all those involved with the disease. Control will be difficult.

**The Antigens** Michael Sela, 2014-05-10. The Antigens Volume VI is a comprehensive treatise covering all aspects of antigens including their chemistry and biology as well as their immunologic role and expression. Parasite antigens and their immunogenicity in infected hosts are explored along with the nature of the antibody combining site and the phenomenon of immunological tolerance. Comprised of three chapters, this volume begins with a discussion on the dynamic aspects of the function of antibodies, paying particular attention to the structure of immunoglobulins and the folding of their domains, the dynamics of segmental flexibility, the kinetics of antibody-hapten association and the kinetic expression of elementary interaction and the conformational transitions within the antibody molecule induced by hapten binding. The next chapter focuses on the immunogenicity of parasite antigens in infected hosts, citing such parasites as trypanosomes, *Schistosoma mansoni* and *Fasciola hepatica*. The last chapter deals with immunological tolerance, its induction and duration and its effect on the specificity of the immune response. This monograph will be of interest to practitioners and researchers in immunology, experimental and clinical medicine, biochemistry and other disciplines.

*Parasites and Western Man* R.J. Donaldson, 2012-12-06. The purpose of this book is to provide a concise account of those parasites which affect man in developed countries. Other textbooks relate mainly to the tropics and subtropics where parasites, by comparison, are more common. It is widely believed that this difference in prevalence between tropical and temperate countries is due to differences in climatic conditions alone. Whilst it is true that certain vectors can only act as transmitters of disease under climatic conditions found in the tropics, there are many other instances where climate per se is not a decisive factor. More often parasitic disease is related to the poor standards of hygiene, sanitation and nutrition which characterize many of these tropical and subtropical areas. The advent of more international travel has added a new dimension to the study of parasites with the appearance of rare and exotic parasitic infections in the West. This book encompasses the entire field of parasites in developed countries with a brief reference to other parts of the world whenever

appropriate for the sake of completeness Each chapter provides basic information as well as recent advances and current thinking Thus the book will serve as an excellent comprehensive introduction to those taking up a specialized interest in the subject as well as those who may wish to obtain general information but are not actively working in the field Although it is primarily written from a medical and veterinary standpoint it provides valuable material for other disciplines
