Parental Behavior In Birds:

Parental Behavior in Birds Rae Silver, 1977 *Parental Behavior in Birds* Rae Silver, 1977 **Hormonal Regulation of Parental Behavior in Birds and Infrahuman Mammals** Daniel S. Lehrman, 1961 **Parental Care: Evolution, Mechanisms, And Adaptive Significance**, 1996-11-18

Advances in the Study of Behavior presents its first thematic volume focusing on the physiological and behavioral mechanisms underlying parental care. The book discusses parental care both within and across taxa with coverage of invertebrates and early vertebrates: fishes, amphibians, reptiles, mammals, birds, and nonhuman primates. A running theme throughout the chapters shows that parental care is anchored to the ecology, reproductive physiology, and embryonic development of a species. Coverage also includes mechanisms of parental care, including analysis of the stimuli that parents respond to and how parental care is initiated, maintained, and terminated. Individual differences within species are also explored, examining stable differences in maternal style, how they arise, and the consequences for both mother and infant.

The Neurobiology of Parental Behavior Michael Numan, Thomas R. Insel, 2006-05-17

In addition to filling a need within the field of parental behavior, this book contributes importantly to the growing area of emotional and motivational neuroscience. A major part of neuroscience research at the whole organism level has been focused on cognitive neuroscience with an emphasis on the neurobiology of learning and memory, but there has been a recent upsurge in research which is attempting to define the neural basis of basic motivational and emotional systems which regulate such behaviors as food intake, aggression, reproduction, reward seeking behaviors, and anxiety-related behaviors. In this book, the emphasis is on the research findings obtained from rodents, sheep, and primates. The authors' goal, of course, was to provide a foundation that may help us understand the neurobiology of human parental behavior. Indeed, the last chapter attempts to integrate the non-human research data with some human data in order to make some inroads toward an understanding of postpartum depression, child abuse, and child neglect. Clearly, motivational and emotional neuroscience has close ties to psychiatry, and this connection will be very evident in the final chapter. By understanding the neurobiology of parental behavior, we are also delving into neurobiological factors which may have an impact on core human characteristics involved in sociality, social attachment, nurturing behavior, and love. In this very violent world, it is hard to conceive of a group of characteristics that are more worthy of study.

Hormones and Reproduction of Vertebrates, Volume 4 David O. Norris, Kristin H. Lopez, 2011-05-04

This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals. It is designed to provide a readable, coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events. Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group, respectively, the volumes are prepared so as to provide a thorough topical treatment across the vertebrates. Terminology has been standardized across the volumes to reduce confusion where multiple

names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them The Parental Brain Michael Numan,2020-05-01 The Parental Brain

Mechanisms Development and Evolution presents a comprehensive analysis of how the brain regulates parental behavior in nonhuman animals and in humans how these brain mechanisms develop and how such development can go awry leading to faulty parental behavior Further the proposal is examined that the maternal brain served as a foundation or template for the evolution of other types of strong prosocial bonds in mammals such as the hyper prosociality that occurs in humans Unique aspects of this book are its multilevel perspective and the integration and comparison of animal and human research in order to create a complete understanding of the parental brain Topics covered include the following Maternal paternal and alloparental behavior Hormonal regulation of parental behavior Oxytocin and parental behavior Subcortical neural circuits regulating parental behavior in nonhuman mammals The interactions between cortical and subcortical neural circuits that are associated with parental cognitions emotions and behavior in humans How maternal care directed toward one's infants influences the development of the parental brain in the affected infants The intergenerational transmission or continuity of normal and abnormal maternal behavior The involvement of epigenetics and gene by environment interactions in the development of the parental brain Evolutionary perspectives on the parental brain particularly with respect to alloparenting and cooperative breeding that have provided a framework for appreciating how the parental brain could have provided a foundation for the hyper prosociality that occurs within human social groups This book will be a valuable resource for behavioral neuroscientists and neuroendocrinologists social neuroscientists developmental psychobiologists and psychologists anthropologists and evolutionary psychologists with an interest in parental behavior mother infant relationships child development and the evolution of prosocial behavior **Biology and Comparative Physiology of Birds**

Stacey, Walter D. Koenig, 1990-04-19 Cooperative breeding is an unusual kind of social behaviour found in a few hundred species worldwide in which individuals other than the parents help raise young Understanding the apparently altruistic behaviour of helpers has provided numerous challenges to evolutionary biologists This book includes detailed first hand summaries of many of the major empirical studies of cooperatively breeding birds It provides comparative information on the demography social behaviour and behavioural ecology of these unusual species and explores the diversity of ideas and the controversies which have developed in this field The studies are all long term and consequently the book summarises some of the most extensive studies of the behaviour of marked individuals ever undertaken Graduate students and research workers in ornithology sociobiology behavioural ecology and evolutionary biology will find much of value in this book **Behavioral Ecology of Tropical Animals** Regina H. Macedo, 2010-11-15 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onward **Hormones and Reproduction of Vertebrates** David O.
