**Particle Physics** Maurice Levy, 2012-12-06 The 1987 Cargese Summer Institute on Particle Physics was organized by the Universite Pierre et Marie Curie Paris M LEVY and J L BASDEVANT CERN M JACOB the Universite Catholique de Louvain D SPEISER and J WEYERS and the Katholieke Universiteit te Leuven R GASTHANS which since 1975 have joined their efforts and worked in common It was the 25th summer institute held at Cargese and the ninth one organized by the two institutes of theoretical physics at Leuven and Louvain la Neuve The 1987 school was centered around two main themes the recent developments in string theory and the physics of high energy colliders As the standard model of the fundamental interactions has repeatedly proved to be successful in explaining the experimental findings in particle physics more attention was given in this school to possible new features arising from string inspired models This led us to include in the program a series of lectures devoted to string theory per se They covered the more mathematical aspects of the theory as well as the phenomenological implications The second theme concerns high energy collider physics and was meant to prepare young physicists for the future experimental results to be expected from the pp and e e colliders It brought theorists and experimentalists actively together in their search for a better understanding of the high energy phenomena *Particle*

**Nonperturbative Quantum Field Theory** G. Hooft, A. Jaffe, G. Mack, P.K. Mitter, R. Stora, 2012-12-06 During the past 15 years quantum field theory and classical statistical mechanics have merged into a single field and the need for nonperturbative methods for the description of critical phenomena in statistical mechanics as well as for problems in elementary particle physics are generally acknowledged Such methods formed the central theme of the 1987 Cargese Advanced Study Institute on Nonperturbative Quantum Field Theory The use of conformal symmetry has been of central interest in recent years and was a main subject at the ASI Conformal invariant quantum field theory describes statistical mechanical systems exactly at a critical point and can be analysed to a remarkable extent by group theoretical methods Very strong results have been obtained for 2 dimensional systems Conformal field theory is also the basis of string theory which offers some hope of providing a unified theory of all interactions between elementary particles Accordingly a

number of lectures and seminars were presented on these two topics After systematic introductory lectures conformal field theory on Riemann surfaces orbifolds sigma models and application of loop group theory and Grassmannians were discussed and some ideas on modular geometry were presented Other lectures combined traditional techniques of constructive quantum field theory with new methods such as the use of index theorems and infinite dimensional Kac Moody symmetry groups The problems encountered in a quantum mechanical description of black holes were discussed in detail
