Particles and Fields in the Magnetosphere Billy McCormac, 2012-12-06 This book contains the lectures presented at the Advanced Study Institute Earth's Particles and Fields 1969 which was held at the University of California Santa Barbara during the period August 4 through 15 1969 One hundred seventy persons from twelve different countries attended the Institute The authors and the publisher have made a special effort for rapid publication of an up to date status of the particles and fields in the earth's magnetosphere which is an ever changing research area Special thanks are due to the lecturers for their diligent preparation and excellent presentations The individual lectures and the published papers were deliberately limited the author's cooperation in conforming to these specifications is greatly appreciated The contents of the book are organized by subject area rather than in the order in which papers were presented during the Institute Many thanks are due to Drs Kinsey Anderson Sam Bame Leverett Davis Gilbert Mead Harry Elliot Kenneth Behannon Reimar Lust A W Schardt Carl Gunne Eilthammar and Martin Walt who served as session chairmen during the Institute and contributed greatly to its success by skillfully directing the discussion period in a stimulating manner after each lecture Dr Martin Walt and the Summary Panel worked hard to prepare an excellent summary of various aspects of particles and fields in the magnetosphere at the end of the Institute

Cosmic Rays in Magnetospheres of the Earth and other Planets Lev Dorman, 2009-01-20 The problem of cosmic ray CR geomagnetic effects came to the fore at the beginning of the 1930s after the famous expeditions by J Clay onboard ship Slamat between the Netherlands and Java using an ionization chamber Many CR latitude expeditions were organized by the famous scientists and Nobel Laureates R Millikan and A Compton From the obtained latitude curves it follows that CRs cannot be gamma rays as many scientists thought at that time but must be charged particles From measurements of azimuthally geomagnetic effect at that time it also followed that these charged particles must be mostly positive see Chapter 1 and for more details on the history of the problem see monographs

of Irina Dorman M1981 M1989 The first explanations of obtained results were based on the simple dipole approximation of the geomagnetic field and the theory of energetic charged particles moving in dipole magnetic fields developed in 1907 by C Stormer to explain the aurora phenomenon Let us note that it was made about 5 years before V Hess discovered CRs and received the Nobel Prize in 1936 together with K Anderson for the discovery of CR and positrons in CR [Nuclear Science Abstracts](#) ,1976 **Scientific and Technical Aerospace Reports** ,1972 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database [Objectives and Goals in Space Science and Applications](#), 1968 United States. Burch,2016-09-23 Over a half century of exploration of the Earth's space environment it has become evident that the interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields Interestingly it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014 this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere ionosphere coupling conference at Yosemite in 1974 and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities Topics covered in this volume include Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysicists and planetary scientists with a cross disciplinary approach involving advanced measurement and modeling techniques Magnetosphere Ionosphere Coupling in the Solar System is a valuable resource for researchers in the fields of space and planetary science atmospheric science space
