Partition Problems In Topology Contemporary Mathematics Vol 84:

Set Theory of the Continuum Haim Judah, Winfried Just, Hugh Woodin, 2012-12-06 Primarily consisting of talks presented at a workshop at the MSRI during its Logic Year 1989-90 this volume is intended to reflect the whole spectrum of activities in set theory The first section of the book comprises the invited papers surveying the state of the art in a wide range of topics of set theoretic research The second section includes research papers on various aspects of set theory and its relation to algebra and topology Contributors include J Bagaria T Bartoszynski H Becker P Dehornoy Q Feng M Foreman M Gitik L Harrington S Jackson H Judah W Just A S Kechris A Louveau S MacLane M Magidor A R D Mathias G Melles W J Mitchell S Shelah R A Shore R I Soare L J Stanley B Velikovic H Woodin Recent Progress in General Topology III K.P. Hart, J. van Mill, P. Simon, 2013-12-11 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade following the previous editions North Holland 1992 and 2002 The book was prepared in connection with the Prague Topological Symposium held in 2011 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs from that chosen in 2002 The following areas experienced significant developments Fractals Coarse Geometry Topology Dimension Theory Set Theoretic Topology and Dynamical Systems **Sets and Extensions in the Twentieth Century**, 2012-01-24 Set theory is an autonomous and sophisticated field of mathematics that is extremely successful at analyzing mathematical propositions and gauging their consistency strength It is as a field of mathematics that both proceeds with its own internal questions and is capable of contextualizing over a broad range which makes set theory an intriguing and highly distinctive subject This handbook covers the rich history of scientific turning points in set theory providing fresh insights and points of view Written by leading researchers in the field both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates graduate students and researchers in mathematics the history of philosophy and any discipline such as computer science cognitive psychology and artificial intelligence for whom the historical background of his or her work is a salient consideration Serves as a singular contribution to the intellectual history of the 20th century Contains the latest scholarly discoveries and interpretative insights Combinatorial Set Theory of C*-algebras Ilijas Farah, 2019-12-24 This book explores and highlights the fertile interaction between logic and operator algebras which in recent years has led to the resolution of several long standing open problems on C algebras The interplay between logic and operator algebras C algebras in particular is relatively young and the author is at the forefront of this interaction The deep level of scholarship contained in these pages is evident and opens doors to operator algebraists interested in learning about the set theoretic methods relevant to their field as well as to set theorists interested in expanding their view to the non commutative realm of operator algebras Enough background is included from both subjects to make the book a convenient self contained source for students A fair number of the exercises form an integral part of the text They are chosen to widen and deepen the material

from the corresponding chapters Some other exercises serve as a warmup for the latter chapters

Geometric Set Theory Paul B. Larson, Jindrich Zapletal, 2020-07-16 This book introduces a new research direction in set theory the study of models of set theory with respect to their extensional overlap or disagreement In Part I the method is applied to isolate new distinctions between Borel equivalence relations Part II contains applications to independence results in Zermelo Fraenkel set theory without Axiom of Choice The method makes it possible to classify in great detail various paradoxical objects obtained using the Axiom of Choice the classifying criterion is a ZF provable implication between the existence of such objects The book considers a broad spectrum of objects from analysis algebra and combinatorics ultrafilters Hamel bases transcendence bases colorings of Borel graphs discontinuous homomorphisms between Polish groups and many more The topic is nearly inexhaustible in its variety and many directions invite further investigation

Recent Progress in General Topology M. Husek, J. van Mill, 1992-11-20 These papers survey the developments in General Topology and the applications of it which have taken place since the mid 1980s The book may be regarded as an update of some of the papers in the Handbook of Set Theoretic Topology eds Kunen Vaughan North Holland 1984 which gives an almost complete picture of the state of the art of Set Theoretic Topology before 1984 In the present volume several important developments are surveyed that surfaced in the period 1984 1991 This volume may also be regarded as a partial update of Open Problems in Topology eds van Mill Reed North Holland 1990 Solutions to some of the original 1100 open problems are discussed and new problems are posed

Logic Colloquium '02 Zoé Chatzidakis, Peter Koepke, Wolfram Pohlers, 2017-03-31 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the twenty seventh publication in the Lecture Notes in Logic series contains the proceedings of two conferences the European Summer Meeting of the Association for Symbolic Logic and the Colloquium Logicum held in Münster Germany in August 2002 This compilation of articles from some of the world's preeminent logicians spans all areas of mathematical logic including philosophical logic and computer science logic It contains expanded versions of a number of invited plenary talks and tutorials that will be of interest to graduate students and researchers in the field of mathematical logic

Notes On Forcing Axioms Stevo Todorćević, 2013-12-26 In the mathematical practice the Baire category method is a tool for establishing the existence of a rich array of generic structures However in mathematics the Baire category method is also behind a number of fundamental results such as the Open Mapping Theorem or the Banach Steinhaus Boundedness Principle This volume brings the Baire category method to another level of sophistication via the internal version of the set theoretic forcing technique It is the first systematic account of applications of the higher forcing axioms with the stress on the technique of building forcing notions rather than on the relationship between different forcing axioms or their consistency strengths

Logic Colloquium '98 Samuel R. Buss, Petr Hájek, Pavel Pudlák, 2017-03-30 Since their inception the

Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the thirteenth publication in the Lecture Notes in Logic series, collects the proceedings of the European Summer Meeting of the Association for Symbolic Logic held at the University of Economics in Prague August 9-15, 1988. It includes surveys and research from preeminent logicians. The papers in this volume range over all areas of mathematical logic including proof theory, set theory, model theory, computability theory, and philosophy. This book will be of interest to all students and researchers in mathematical logic.

Set Theory Tomek Bartoszyński, Haim Judah, 1995-08-15. This research level monograph reflects the current state of the field and provides a reference for graduate students entering the field as well as for established researchers.

Papers on General Topology and Applications, 1993. *Computational Prospects Of Infinity - Part II: Presented Talks* Chi Tat Chong, Qi Feng, Theodore A. Slaman, W. Hugh Woodin, Yue Yang, Sebastian A. Terwijn, Guohua Wu, 2008-06-02. This volume is a collection of written versions of the talks given at the Workshop on Computational Prospects of Infinity held at the Institute for Mathematical Sciences from 18 June to 15 August 2005. It consists of contributions from many of the leading experts in recursion theory, computability theory, and set theory. Topics covered include the structure theory of various notions of degrees of unsolvability, algorithmic randomness, reverse mathematics, forcing, large cardinals, and inner model theory, and many others.

Set Theory Simon Thomas, 2002-01-01. This volume presents the proceedings from the Mid-Atlantic Mathematical Logic Seminar (MAMLS) conference held in honor of András Hajnal at the DIMACS Center, Rutgers University, New Brunswick, NJ. Articles include both surveys and high level research papers written by internationally recognized experts in the field of set theory. Many of the current active areas of set theory are represented in this volume. It includes research papers on combinatorial set theory, set-theoretic topology, descriptive set theory, and set-theoretic algebra. There are valuable surveys on combinatorial set theory, fragments of the proper forcing axiom, and the reflection properties of stationary sets. The book also includes an exposition of the ergodic theory of lattices in higher rank semisimple Lie groups. Essential reading for anyone who wishes to understand much of the recent work on countable Borel equivalence relations.

Papers on General Topology and Applications Susan Andima, 1993. This work offers papers on general topology and its applications, including but not limited to indecomposable continua, semigroups, dynamical systems, Boolean algebras, and categorical patterns. Many of the papers reflect the influence of Mary Ellen Rudin on their authors.
