Viegas, Margaux Baum, 2016-07-15 All around us the natural world goes through cycles of growth and decay Fungi including molds are crucial to these life cycles and can be both destructive and beneficial to humans From the cultivation of mushrooms through the molds employed to make cheeses and other food products to water damaged human environments where mold must be contained this book explores these organisms that exist largely unseen all around us This big picture approach demonstrates how fungi differ from other organisms how they affect the world and their crucial role in our ecosystem Studies in Tropical Wasps--their Hosts and Associates (with Descriptions of New Species) Francis Xavier

theory the first to be written Jan Sapp masterfully traces its development from modest beginnings in the late nineteenth century to its current status as one of the key conceptual frameworks for the life sciences The symbiotic perspective on evolution which argues that higher species have evolved from a merger of two or more different kinds of organisms living together is now clearly established with definitive molecular evidence demonstrating that mitochondria and chloroplasts have evolved from symbiotic bacteria In telling the exciting story of an evolutionary biology tradition that has effectively challenged many key tenets of classical neo Darwinism Sapp sheds light on the phenomena movements doctrines and controversies that have shaped attitudes about the scope and significance of symbiosis Engaging and insightful *Evolution by Association* will be avidly read by students and researchers across the life sciences Natures Partnership T.S

Fincher, 2014-07-17 This book develops and tests an ecological and evolutionary theory of the causes of human values the core beliefs that guide people's cognition and behavior and their variation across time and space around the world We call this theory the parasite stress theory of values or the parasite stress theory of sociality The evidence we present in our book indicates that both a wide span of human affairs and major aspects of human cultural diversity can be understood in light of variable parasite infectious disease stress and the range of value systems evoked by variable parasite stress The same evidence supports the hypothesis that people have psychological adaptations that function to adopt values dependent upon local infectious disease adversity The authors have identified key variables variation in infectious disease adversity and in the core values it evokes for understanding these topics and in novel and encompassing ways Although the human species is the focus in the book evidence presented in the book shows that the parasite stress theory of sociality informs other topics in ecology and evolutionary biology such as variable family organization and speciation processes and biological diversity in general in non human animals Partnerships in the Sea Brian Morton, 1989 Hong Kong's position on the southern coast of

China provides her with a great diversity of animals living in association with each other in the surrounding seas The many examples of association used in the book reflect this diversity and explore some of the many ways marine life lives together

Everyone is talking about partnerships environmental partnerships social partnerships public private partnerships partnerships between NGOs in Europe and the third world How did partnerships come to emerge almost everywhere and at almost the same time What is the inner logic of partnerships And at what point does that logic begin to break down In a highly complex society the conditions on which agreements are built are constantly changing demanding first and foremost that parties agree to reach an agreement Partnering is an answer to the growing differentiation and dynamism of the societies in which we live While this answer holds great potential however it is also very fragile It is the aim of this book to improve our understanding of the shifting ground on which agreements must be reached in today s hyper complex society

Cellular Interactions

H. F. Linskens,J. Heslop-Harrison,2012-12-06 H F LINSKENS and J HESLOP HARRISON The chapters of this volume deal with intercellular interaction phenomena in plants Collectively they provide a broad conspectus of a highly active if greatly fragmented research field Certain limitations have been imposed on the subject matter the most important being the exclusion of long range interactions within the plant body It is true that pervasive hormonal control systems cannot readily be demarcated from controls mediated by pheromones or information carrying molecules with more limited spheres of action but consideration is given in this volume to the main classes of plant hormones and their functions only incidentally since these are treated adequately in other volumes of this Encyclopedia series Volume 9 11 and in numerous other texts and reviews Similarly certain other effects such as those associated with nutrients and ions are not considered in any detail Furthermore we have excluded intracellular interactions and also consideration of transport phenomena which are treated in detail in Volume 3 of this Series Other aspects of inter cellular interaction such as cell surface phenomena and implications of lectin carbohydrate interactions and plant virus inter relationships are treated in other sections of this Encyclopedia Volumes 13B and 14B respectively In the volume on physiological plant pathology Volume 4 of this series special attention has been given to host pathogen interaction These aspects of our subject will therefore be excluded in the present treatise

Handbook of Animal Diversity Richard E. Blackwelder, 2019-08-08 This book is a summary of the diversity between and within the classes of animals It is intended for reference on all aspects of animals that can be studied comparatively but such comparisons requires that the occurrence of the feature in question be known for more than just one or two groups It is in large part a book on invertebrate animals because the vertebrates form only a small part of the diversity of animals
