Short Mathematical Fiction

Alex Kasman

Where can you...

...hear an old man in a nursing home tell of how he disproved Goldbach's Conjecture as part of an undergraduate research project?

... get inside the mind of James Clerk Maxwell as he discovers electromagnetic waves?

...witness the 19th century's greatest mathematician finally get the credit she was denied by sexism and murder?

Only in the fictional world of *Reality Conditions*, a collection of short stories that span a variety of genres, but have mathematics as a common central theme. Each story is a mathematical journey designed to entertain, educate and tantalize.

There is something here for everyone: humor to drama, the little details to the big picture, science fiction to true histories. Through these stories, those with little mathematical background will encounter some of the most interesting parts of the field of mathematics for the first time. But even professional mathematicians will be captivated by ideas that take us to the limits of knowledge, addressing the questions of how mathematics is related to human mind and how it is related to reality in ways that only fiction can.

The book is perfect for leisure reading, but it is also well suited for use at schools and universities. Teachers in traditional math courses can select individual stories for their students. Or, with the growing importance of interdisciplinary courses and quantitative literacy across the curriculum, the entire book could help to form the basis for a creative course in "Mathematics in Fiction".

Join one of the leading experts in the area of mathematical fiction as he takes us on a whirlwind tour of mathematics, both real and imaginary.

Reality Conditions Short Mathematical Fiction:

Reality Conditions Alex Kasman, 2005 *Mathematics in Popular Culture* Jessica K. Sklar, Elizabeth S. Sklar, 2014-01-10 Mathematics has maintained a surprising presence in popular media for over a century In recent years the movies Good Will Hunting A Beautiful Mind and Stand and Deliver the stage plays Breaking the Code and Proof the novella Flatland and the hugely successful television crime series NUMB3RS all weave mathematics prominently into their storylines Less obvious but pivotal references to the subject appear in the blockbuster TV show Lost the cult movie The Princess Bride and even Tolstoy's War and Peace In this collection of new essays contributors consider the role of math in everything from films baseball crossword puzzles fantasy role playing games and television shows to science fiction tales award winning plays and classic works of literature Revealing the broad range of intersections between mathematics and mainstream culture this collection demonstrates that even mass entertainment can have a hidden depth **The Magic Numbers of the Professor** Owen O'Shea, Underwood Dudley, 2007-03-08 Numerical curiosities ranging from coincidences and the first moon walk to proposition bets involving dice and cards *Mathematical Apocrypha Redux: More Stories and Anecdotes of Mathematicians and the Mathematical* Steven G. Krantz, 2019-11-25 A companion to Mathematical Apocrypha published in 2002 this second volume of anecdotes stories quips and ruminations about mathematics and mathematicians is sure to please It differs from other books of its type in that many of the stories are from the twentieth century and many about currently living mathematicians A number of the best stories come from the author's first hand experience The writing is lively engaging and informative There are stories the reader may wish to share with students and colleagues friends and relatives The purpose of the book is to explore and to celebrate the many facets of mathematical life The stories reveal mathematicians as intense human and sympathetic They should resonate with readers everywhere This book will appeal to students from high school through graduate school to faculty and mathematical scientists of all stripes and also to physicists engineer and anyone interested in mathematics **The Edge of the Universe** Deanna Haunsperger, Stephen Kennedy, 2006 Beautifully printed with 24 pages of full color Ideal for Math Clubs Math Horizons is a magazine that celebrates the people and ideas which are mathematics Containing the editor's selections from the first ten years of the magazine's existence this volume features exquisite expositions of undergraduate level mathematics Broad and appealing the coverage also includes fiction with mathematical themes literary theatrical and cinematic criticism humor history and social history Mathematics is shown as a human endeavor through biographies and interviews of mathematicians and users of mathematics including artists writers and scientists The puzzles games and activities throughout make it a valuable resource for student math clubs Though especially appealing to students of mathematics from high school to graduate school and their teachers this collection is an eclectic and wide ranging look at the culture of mathematics and offers enjoyable reading for anyone with an interest in mathematics Aha! A Two Volume Collection Martin Gardner, 2006-12-14 A collection of puzzles that challenge

reasoning power and intuition and help develop problem solving ability [The Early Mathematics of Leonhard Euler C. Edward Sandifer](#),2020-07-14 The Early Mathematics of Leonhard Euler gives an article by article description of Leonhard Euler s early mathematical works the 50 or so mathematical articles he wrote before he left St Petersburg in 1741 to join the Academy of Frederick the Great in Berlin These early pieces contain some of Euler s greatest work the Konigsberg bridge problem his solution to the Basel problem and his first proof of the Euler Fermat theorem It also presents important results that we seldom realize are due to Euler that mixed partial derivatives are usually equal our f_{xx} notation and the integrating factor in differential equations The books shows how contributions in diverse fields are related how number theory relates to series which in turn relate to elliptic integrals and then to differential equations There are dozens of such strands in this beautiful web of mathematics At the same time we see Euler grow in power and sophistication from a young student when at 18 he published his first work on differential equations a paper with a serious flaw to the most celebrated mathematician and scientist of his time It is a portrait of the world s most exciting mathematics between 1725 and 1741 rich in technical detail woven with connections within Euler s work and with the work of other mathematicians in other times and places laced with historical context *99 Points of Intersection* Hans Walser,2006-09-14 A collection of surprising

concurrences of lines with some typical methods for proving their existence **Mathematical Reviews** ,2005 [The Australian Mathematics Teacher](#) ,2005 **The Mathematics Teacher** ,2006 **Applied Mechanics Reviews** ,1979

The Book Review Digest ,2005 [Science Fiction, Ethics and the Human Condition](#) Christian Baron,Peter Nicolai Halvorsen,Christine Cornea,2017-07-10 This book explores what science fiction can tell us about the human condition in a technological world with the ethical dilemmas and consequences that this entails This book is the result of the joint efforts of scholars and scientists from various disciplines This interdisciplinary approach sets an example for those who like us have been busy assessing the ways in which fictional attempts to fathom the possibilities of science and technology speak to central concerns about what it means to be human in a contemporary world of technology and which ethical dilemmas it brings along One of the aims of this book is to demonstrate what can be achieved in approaching science fiction as a kind of imaginary laboratory for experimentation where visions of human or even post human life under various scientific technological or natural conditions that differ from our own situation can be thought through and commented upon Although a scholarly work this book is also designed to be accessible to a general audience that has an interest in science fiction as well as to a broader academic audience interested in ethical questions **History of Shock Waves, Explosions and Impact** Peter O. K. Krehl,2008-09-24 This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion The history of this complex process is first reviewed in a general survey Subsequently the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery This book is ideal for everyone professionally interested in shock wave phenomena **Melville's Short**

Fiction, 1853-1856 William B. Dillingham, 2008 This study treats comprehensively the sixteen short works of fiction that Herman Melville wrote between 1853 and 1856 most of which were published in Harper's and Putnam's magazines Concentrating on the writer's two basic motivations for writing as he did in these stories Dillingham argues that Melville created a surface of almost inane congeniality in many of the works an illusion of vapidly that camouflages a profundity often missed by his readers He sought to hide disturbing themes because the magazines for which he was writing would almost certainly have rejected his attempts to be more direct Dillingham's method is not however confined to a reading of the texts Melville's stories contain so many allusions to the contemporary scene that they constitute in themselves a cultural study An important contribution of Melville's Short Fiction is its discussion of these allusions Finally Dillingham examines the relationship between the short fiction and Melville's own life Much of the writer's frustration and struggle is concealed in these early works Melville's friendship with Hawthorne for example an intense and yet in some ways disappointing relationship for both men is explored as an important influence on several of the stories

Fact and Fiction Albrecht Koschorke, 2018-04-23 How can we develop a cultural theory starting with the basic insight that human beings are storytelling animals Within literary studies narratology is a highly developed field However literary historians have not paid much attention to the large and small stories abounding in everyday discourse guiding all kinds of social activity and providing common ground for whole societies but also fueling controversies and hostilities Moreover narrative is not only a scholarly category but has come into use in many fields of social activity as a tool for cultural self-fashioning This book is based on the assumption that to a large extent social dynamics is modeled in an aesthetic manner via narratives It explores the narrative organization of cultural spaces and time frames the mythological shaping of communities and adversaries and the co-production of narratives and institutions aimed at stabilizing social life In this framework the epistemological problem looms large of how an instrument as unreliable as narrative can participate in the creation of a social consensus regarding truth This problem endows the general topics explored in this book with a particularly contemporary dimension
