River Channel Management Towards Sustainable Catchment Hydrosystems:

River Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management. It explores the multi-disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind. It uses channel restoration where appropriate and is designed to be sustainable. River Channel Management is divided into five sections. The Introduction outlines the need for river channel management. Retrospective Review offers an overview of twentieth-century engineering methods and the ways that river channel systems operate. Realisation explains how greater understanding of river channel adjustments, channel hazards, and river basin planning created a context for twenty-first-century management. Requirements for Management explains and examines environmental assessment, restoration-based approaches, and methods that work towards design with nature. Final Revision speculates about prospects for twenty-first-century river channel management. River Channel Management is written for higher-level undergraduates and for postgraduates in geography, ecology, engineering, planning, geology, and environmental science, for professionals involved in river channel management, and for staff in environmental agencies.

Routledge Handbook of Ecological and Environmental Restoration Stuart K. Allison, Stephen D. Murphy, 2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new habitats has forced restoration ecologists to re evaluate their goals and the methods they use This comprehensive handbook brings together an

internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume

River Science David J. Gilvear, Malcolm T. Greenwood, Martin C. Thoms, Paul J. Wood, 2016-03-03 River Science is a rapidly developing interdisciplinary field at the interface of the natural sciences engineering and socio political sciences It recognises that the sustainable management of contemporary rivers will increasingly require new ways of characterising them to enable engagement with the diverse range of stakeholders This volume represents the outcome of research by many of the authors and their colleagues over the last 40 years and demonstrates the integral role that River Science now plays in underpinning our understanding of the functioning of natural ecosystems and how societal demands

and historic changes have affected these systems The book will inform academics policy makers and society in general of the benefits of healthy functioning riverine systems and will increase awareness of the wide range of ecosystem goods and services they provide **Earth System Processes and Disaster Management** Rajiv Sinha,Rasik Ravindra,2012-08-14 One

of the fundamental goals of earth system science research is to adopt a more holistic view of the earth as a system comprising different domains The Society of Earth Scientists has brought out this multidisciplinary publication to emphasize the need of an integrated approach to understand the Earth system It focuses on natural disasters and in particular on climate change and its effects in Asia and understanding the significance of these developments within the context of the paleo climatic record The later sections of the book then focus on other types of natural disasters as well as those induced by human interaction with our environment **The SAGE Handbook of Geomorphology** Kenneth J Gregory,Andrew S

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the

use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

The Lower Damodar River, India Kumkum Bhattacharyya, 2011-03-29 Interweaving the human aspects of river control with analysis of hydro physical data including historical data over the last few centuries this monograph is a comprehensive evaluation of the Damodar's lower reaches While the Damodar River isn't an exceptional tropical river nor does it feature classic examples of river control structures it is unusual and worthy of study due to the fact that nowhere else in the tropical world have riverine sandbars been used as a resource base as well as for permanent settlements Based on their knowledge of river stages the inhabitants have fine tuned their land use to flood events applying a concept of flood zoning to the riverbed Every available space has been utilized rationally and judiciously This rare human environmental study analyzes the remarkable way in which immigrants unfamiliar with the riverine environment have adapted to the altered hydrologic regime of the river In doing so they have demonstrated a sophisticated understanding of the flood regime and the vagaries of an unpromising environment in their land use cropping and settlement patterns Spurred on by restricted social and economic mobility and sometimes political constraints these self settled refugees have learned to adapt to their environment and live with the floods Bhattacharyya's text is particularly timely as anthropogenic processes of this kind have not been adequately studied by geographers
