An exploration of the relationship between river behaviour and environmental change The research involves a wide range of disciplines including geomorphology geophysics archaeology palaeoecology engineering and planning *Nile River Basin* Assefa M. Melesse, 2011-03-28 This book presents results of scientific studies ranging from hydrological modelling to water management and policy issues in the Nile River basin It examines the physical hydrometeorological and hydrogeological description of the basin along with analysis in understanding the hydrological processes of the basin under the changing land use stemming from population pressure and increased natural resources tapping The book discusses the increased impact of climate change on the river flows and such issues as water availability and demand management and policy to offset the imbalance between demand and available resources This book will be of interest to researchers practitioners water resources managers policy makers as well as graduate and undergraduate students It is a useful reference text for ecohydrology arid zone hydrology hydrology of transboundary rivers and similar courses *Geomorphological Processes and Landscape Change* David L. Higgitt, E. Mark Lee, 2011-07-15 The expert contributors to this cutting edge volume provide an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Provides an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Considers the relevance of technological and conceptual approaches to understanding landscape dynamics Examines key process environments highlighting significant trends and the influence of human activity and incorporating examples and modelling Encourages geographers to look forward to the challenges that geomorphology faces in the new millennium Find out more information about the RGS IBG journals by following the links below AREA <http://www.blackwellpublishing.com/journal.asp?ref=0004-0894> The Geographical Journal <http://www.blackwellpublishing.com/journal.asp?ref=0016-7398> Transactions of the Institute of British Geographers <http://www.blackwellpublishing.com/journal.asp?ref=0020-2754> *Global Environments Through the Quaternary* David E. Anderson, Andrew S. Goudie, Adrian G. Parker, 2007-01-25 Global Environments through the Quaternary delves into the environmental changes that have taken place during the Quaternary the two to three million years during which man has inhabited the Earth It is essential reading for any students seeking a balanced objective overview of this truly interdisciplinary subject Climate Change in Deserts Martin Williams, 2014-08-11 Reconstructing climatic changes in deserts and their margins at a variety of scales in space and time this book draws upon evidence from land and sea including desert dunes wind blown dust river and lake sediments glacial moraines plant and animal fossils isotope geochemistry speleothems soils and prehistoric archaeology The book summarises the Cenozoic evolution of the major

deserts of the Americas Eurasia Africa and Australia and the causes of historic floods and droughts The book then considers the causes and consequences of desertification and proposes four key conditions for achieving ecologically sustainable use of natural resources in arid and semi arid areas Climate Change in Deserts is an invaluable reference for researchers and advanced students interested in the climate and geomorphology of deserts geographers geologists ecologists archaeologists soil scientists hydrologists climatologists and natural resource managers **Climate Variability and Change** Flow

Regimes from International Experimental and Network Data (Project),2006 This volume contains 117 reviewed papers from over 30 countries published in English French and Spanish which reflect both international dimension of FRIEND and the key challenges facing hydrologists in the 21st century **The ^AOxford Handbook of Ancient Nubia** Geoff

Emberling,Bruce Williams,2021-01-15 The cultures of Nubia built the earliest cities states and empires of inner Africa but they remain relatively poorly known outside their modern descendants and the community researching them The Oxford Handbook of Ancient Nubia brings together chapters by an international group of scholars on the history and archaeology of Nubia The Nile: Natural and Cultural Landscape in Egypt Harco Willems,Jan-Michael Dahms,2017-03-15 Although

Herodot s dictum that Egypt is a gift of the Nile is proverbial there has been only scant attention to the way the river impacted on ancient Egyptian society Egyptologists frequently focus on the textual and iconographic record whereas archaeologists and earth scientists approach the issue from the perspective of natural sciences The contributions in this volume bridge this gap by analyzing the river both as a natural and as a cultural phenomenon Adopting an approach of cultural ecology it addresses issues like ancient land use administration and taxation irrigation and religious concepts

Reindeer Hunters of the Ice Age in Europe Laure Fontana,2022-09-26 This book undertakes a thorough study of Reindeer in the Upper Pleniglacial and Tardiglacial societies in France It addresses two main topics the economy of animal resources within the societies and the exploitation of Reindeer organized within the annual cycle in terms of space and time between 30 000 and 14 000 cal BP in France The author proposes an analysis and hypothesis regarding the economy of animal resources and the nomadic cycle of the last Paleolithic hunter gatherer societies in order to identify a Reindeer system The author discusses the relationship between Reindeer and human mobility and offers some conclusions regarding the annual cycles of nomadism The volume scrutinizes the distinct eco systems in three regions and its effects on the movements of both human and animal This book is of interest to zooarchaeologists and prehistorians **The Mechanism of Induced Seismicity**

Cezar I. Trifu,2012-12-06 **Encyclopedia of Quaternary Science** Cary Mock,2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major

reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Special External Effects on Fluvial System

Evolution Jef Vandenberghe, David R. Bridgland, Xianyan Wang, 2019-12-18 Rivers are an excellent witness of the dynamics affecting Earth's surface due to their sedimentary products and morphological expression which may be considered as fluvial archives Until now the focus has been on evaluating the general impact of individual external factors However the importance of the specific environmental characteristics of these factors has become increasingly recognized as highlighted in recent case studies For example the effects of regional climate differentiated topography and vegetation and frozen ground appear to play an essential role in the evolution of the fluvial system Integration of such environmental conditions in the processes that were active within the complex fluvial system will open new perspectives in our progressive understanding of the evolution of landscape form ecology sediment fluxes and hydrology of the system within the framework of the external drivers such as tectonics general climate and human activity This is an appealing challenge that we wish to address in the present Special Issue under the aegis of the Fluvial Archives Group FLAG

The British Lower Palaeolithic John

McNabb, 2011-03-17 Taking as its central theme the issue of whether early Hominins organized themselves into societies as we understand them John McNabb looks at how modern researchers recognize such archaeological cultures He examines the existence of a stone tool culture called the Clactonian to introduce the multidisciplinary nature of the subject In analyzing the various kinds of data archaeologists would use to investigate the existence of a Palaeolithic culture this book represents the latest research in archaeology population dispersals geology climatology human palaeontology evolutionary psychology environmental and biological disciplines and dating techniques along with many other research methods

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed

literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned Sediment Flux to Basins Stuart J. Jones,L. E. Frostick,2002 **Geological**

Correlation ,2000 **Quaternary of the Trent** David R. Bridgland,Andy Howard,Mark J. White,Tom S. White,2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical

frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia River Restoration Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia Alluvial Archaeology in Europe Andrew J. Howard, M.G. Macklin, D.G. Passmore, 2003-01-01 This book documents and assesses over ten years of research in the field bringing together expertise and knowledge from the disciplines of archaeology and geomorphology and highlighting important recent advances discoveries and new directions Reflecting the wide scope of current research in this area the book contains over twenty papers focusing on various aspects of alluvial archaeology from the methodology of dating prospecting excavating etc to previously under analysed geographical areas such as intertidal wetlands **Encyclopedia of Quaternary Science**, 2006-11-24 The quaternary sciences constitute a dynamic multidisciplinary field of research that has been growing in scientific and societal importance in recent years This branch of the Earth sciences links ancient prehistory to modern environments Quaternary terrestrial sediments contain the fossil remains of existing species of flora and fauna and their immediate predecessors Quaternary science plays an integral part in such important issues for modern society as groundwater resources and contamination sea level change geologic hazards earthquakes volcanic eruptions tsunamis and soil erosion With over 360 articles and 2 600 pages many in full color the Encyclopedia of Quaternary Science provides broad ranging up to date articles on all of the major topics in the field Written by a team of leading experts and under the guidance of an international editorial board the articles are at a level that allows undergraduate students to understand the material while providing active researchers with the latest information in the field Also available online via ScienceDirect 2006 featuring extensive browsing searching and internal cross referencing between articles in the work plus dynamic linking to journal articles and abstract databases making navigation flexible and easy For more information pricing options and availability visit www.info.sciencedirect.com 360 individual articles written by prominent international authorities
