Extinction Douglas H. Erwin, 2015-03-22 Some 250 million years ago the earth suffered the greatest biological crisis in its history Around 95 percent of all living species died out a global catastrophe far greater than the dinosaurs demise 185 million years later How this happened remains a mystery But there are many competing theories Some blame huge volcanic eruptions that covered an area as large as the continental United States others argue for sudden changes in ocean levels and chemistry including burps of methane gas and still others cite the impact of an extraterrestrial object similar to what caused the dinosaurs extinction Extinction is a paleontological mystery story Here the world s foremost authority on the subject provides a fascinating overview of the evidence for and against a whole host of hypotheses concerning this cataclysmic event that unfolded at the end of the Permian After setting the scene Erwin introduces the suite of possible perpetrators and the types of evidence paleontologists seek He then unveils the actual evidence moving from China where much of the best evidence is found to a look at extinction in the oceans to the extraordinary fossil animals of the Karoo Desert of South Africa Erwin reviews the evidence for each of the hypotheses before presenting his own view of what happened Although full recovery took tens of millions of years this most massive of mass extinctions was a powerful creative force setting the stage for the development of the world as we know it today In a new preface Douglas Erwin assesses developments in the field since the book s initial publication *Treatise on Geomorphology* ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this *Treatise on Geomorphology* will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the

historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Europe Kevin Hillstrom, Laurie Collier Hillstrom, 2003-08-13 A concise yet thorough overview of the environmental issues problems and controversies facing the world's most densely populated continent Europe Europe one of six titles in The World's Environments series tackles the tough issues the complex problems and the political controversies surrounding the continent's environmental past its complicated present and its uncertain future Europe looks at the catastrophes in January 2000 a massive spill of cyanide and heavy metals from a gold mining operation in Romania destroyed all biological life in the Tisza Hungary's second biggest river The poisons traveled 1 000 kilometers through Hungary and Yugoslavia where they wreaked havoc on the Danube It also examines the progress European society has shown a greater interest in renewable energy technologies than most other industrialized regions in the last 30 years Serving as both a blueprint for the future as well as a roadmap of the past this book offers a gripping look at Europe's ecological history

Earth Surface Processes and Environmental Changes in East Asia Kenji Kashiwaya, Ji Shen, Ju Yong Kim, 2015-06-11 This book examines relationships between climate hydrological changes and other phenomena including land use and natural disasters during the Holocene and recent past In particular periods of rapid climatic shifts such as global warming and global

cooling are examined through paleohydrological and other studies of various lake catchment systems in East Asia from Mongolia in the north to Taiwan in the south A number of different research techniques are used in the work presented here including sediment analysis and optically stimulated luminescence dating and the reader learns how the lake catchment system functions as a proxy observatory for past and present environmental monitoring The lake catchments studied by the authors of this volume are under similar climatic conditions i e under the East Asia monsoon with some systematic difference in climatic factors Both proxy and observation data are available for the surrounding countries provisions against natural disasters that are related to climate hydrological events and readers will see how present instrumental observation data can be connected to past proxy data sediment information in the system

Genetic Resources of Neotropical Fishes Alexandre W. S. Hilsdorf, Eric M. Hallerman, 2017-06-08 The aim of this book is to systematize and discuss population genetic studies of freshwater fish in a region that harbors the greatest diversity of species among all inland water ecosystems This volume explores the genetic evaluation for a number of orders families and species of Neotropical fishes and provides an overview on genetic resources and diversity and their relationships with fish domestication breeding and food production

Regional Environmental Changes in Siberia and Their Global Consequences Pavel Ya. Groisman, Garik Gutman, 2012-08-14 This volume presents a state of the art assessment of the Earth's climate system in Siberia and relationships between climate ecosystems and people in that region Changes in climatic variables and land cover in Siberia are among the earliest indicators of the Earth's response to climate warming The volume is a compilation of results from studies on climate land cover and land use changes and their interactions with biogeochemical and water cycles atmospheric aerosol and human and wildlife populations in Siberia Regional changes in Siberia are predicted to affect climate and people on a global scale NASA the Russian Academy of

Sciences and several European institutions have supported these studies. The primary supporter of the projects that produced the results compiled in this volume is the NASA Land Cover Land Use Change Program; hence most studies use remote sensing in their research. The chapters in this volume were written by an international team of scientists from the USA, Europe, and Russia under the auspices of the Northern Eurasia Earth Science Partnership Initiative (NEESPI). This book will be of interest to those involved in studying recent and ongoing changes in Siberia, be they senior scientists, early career scientists, or students.

Encyclopedia of Environmental Change John A. Matthews, 2013-12-13. Accessibly written by a team of international authors, the Encyclopedia of Environmental Change provides a gateway to the complex facts, concepts, techniques, methodology, and philosophy of environmental change. This three-volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field. The encyclopedia includes all of the following aspects of environmental change: Diverse evidence of environmental change including climate change and changes on land and in the oceans; Underlying natural and anthropogenic causes and mechanisms; Wide-ranging local, regional, and global impacts from the polar regions to the tropics; Responses of geo-ecosystems and human environmental systems in the face of past, present, and future environmental change; Approaches, methodologies, and techniques used for reconstructing, dating, monitoring, modelling, projecting, and predicting change; Social, economic, and political dimensions of environmental issues; environmental conservation and management; and environmental policy. Over 4,000 entries explore the following key themes and more: Conservation; Demographic change; Environmental management; Environmental policy; Environmental security; Food security; Glaciation; Green Revolution; Human impact on environment; Industrialization; Land-use change; Military impacts on environment; Mining and mining impacts; Nuclear energy; Pollution; Renewable resources; Solar energy; Sustainability; Tourism; Trade; Water resources; Water security; Wildlife conservation. The comprehensive coverage of terminology includes layers of entries ranging from one-line definitions to short essays, making this an invaluable companion for any student of physical geography, environmental geography, or environmental sciences.

Global Change Michael B. McElroy, 1983. **Facing Global Environmental Change** Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04. The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US, Al Gore. By taking this decision in favour of a leader who

has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world

Balancing Water-Energy-Food Security in the Era of Environmental Change

Kuzmych, Lyudmyla, 2024-11-27 The global food security landscape is increasingly precarious with the intricate interplay between water energy and food resources becoming more pronounced amid rising scarcity and environmental challenges As demands for these essential resources escalate the need for a comprehensive understanding of their interconnectedness has never been more urgent Trade offs between these sectors are emerging highlighting the critical need for cross sectoral efficiencies and strategic investment frameworks Balancing Water Energy Food Security in the Era of Environmental Change offers a comprehensive solution to this complex challenge The book equips professionals and researchers with the tools needed to navigate the water energy food nexus by providing cutting edge theoretical frameworks and empirical research findings It offers strategic insights for agricultural enterprises enabling them to forecast plan and control costs effectively ultimately enhancing their disaster risk management and societal resilience strategies
