Robert Steinberg Collected Papers:

Robert Steinberg Collected Papers Robert Steinberg, 1997 This volume is a collection of papers by Robert Steinberg It contains all of his published papers on group theory including those on special representations now called Steinberg representations tensor products of representations finite reflection groups regular elements of algebraic groups Galois cohomology universal extensions etc At the end of the book there is a section called Comments on the Papers The comments by Steinberg explain how ideas and results have evolved and been used since they first appeared **Collected Papers of**

John Milnor John Willard Milnor, 1994 **Robert Steinberg** Robert Steinberg, 2016-12-22 Robert Steinberg's Lectures on Chevalley Groups were delivered and written during the author's sabbatical visit to Yale University in the 1967-1968 academic year The work presents the status of the theory of Chevalley groups as it was in the mid 1960s Much of this material was instrumental in many areas of mathematics in particular in the theory of algebraic groups and in the subsequent classification of finite groups This posthumous edition incorporates additions and corrections prepared by the author during his retirement including a new introductory chapter A bibliography and editorial notes have also been added

Selected Papers of Walter E. Thirring with Commentaries Walter E. Thirring, 1998 Provides facsimiles of some 50 papers on mathematical and statistical physics quantum field theory general relativity and elementary particle physics that Thirring published in various journals from 1950-96 The papers cover some of Thirring's contributions to quantum electrodynamics many body theory entropy and ergodic theory as well as his invention of the field theory of particles in one spatial and one temporal dimension Includes a curriculum vita and a list of publications No index Annotation copyrighted by Book News Inc Portland OR *Selected Papers of E. B. Dynkin with Commentary* Evgenii Borisovich Dynkin, Gary M. Seitz, 2000 Eugene Dynkin is a rare example of a contemporary mathematician who has achieved results in two quite different areas of research algebra and probability In both areas his ideas constitute an essential part of modern mathematical knowledge and form a basis for further development Although his last work in algebra was published in 1955 his contributions continue to influence current research in algebra and in the physics of elementary particles His work in probability is part of both the historical and the modern development of the topic

Selected Works of Lipman Bers Lipman Bers, 1998 *Selected Papers of S. A. Amitsur with Commentary* Shimshon A. Amitsur, Avinoam Mann, 2001 The second volume continues and presumably concludes since they date to two years after his death the selection of almost all of Amitsur's 1921-1994 work demonstrating his wide and enduring contribution to algebra though some in Hebrew and some expositions are not included The sections here are combinatorial polynomial identity theory and division algebras each introduced by a mathematician The papers are reproduced from their original publication in a variety of type styles and page layouts The biographical sketch must be in the first volume There is no index c Book News Inc

Collected Works of William P. Thurston with Commentary Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-02 William Thurston's work has had a profound influence on mathematics He

connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston s major writings many of which are appearing in publication for the first time Volumes I III contain commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume II contains William Thurston s papers on the geometry and topology of 3 manifolds on complexity constructions and computers and on geometric group theory

The Selected Works of V.S. Varadarajan V. S. Varadarajan,1999 V S Varadarajan has made significant contributions to a remarkably broad range of mathematical subjects which include probability theory various mathematical aspects of quantum mechanics harmonic analysis on reductive groups and symmetric spaces and the modern theory of meromorphic differential equations The papers included in this volume have been selected to highlight these contributions For other wonderful titles written by this author see Euler through Time A New Look at Old Themes Supersymmetry for Mathematicians An Introduction The Mathematical Legacy of Harish Chandra A Celebration of Representation Theory and Harmonic Analysis and Algebra in Ancient and Modern Times

The Geometry and Topology of Three-Manifolds William P. Thurston,2022-07-19 William Thurston s work has had a profound influence on mathematics He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston s major writings many of which are appearing in publication for the first time Volumes I III contain commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume IV contains Thurston s highly influential though previously unpublished 1977 78 Princeton Course Notes on the Geometry and Topology of 3 manifolds It is an indispensable part of the Thurston collection but can also be used on its own as a textbook or for self study

Selected Works of Ellis Kolchin with Commentary Ellis Robert Kolchin,Alexandru Buium,Phyllis Joan Cassidy,1999 The work of Joseph Fels Ritt and Ellis Kolchin in differential algebra paved the way for exciting new applications in constructive symbolic computation differential Galois theory the model theory of fields and Diophantine geometry This volume assembles Kolchin s mathematical papers contributing solidly to the archive on construction of modern differential algebra This collection of Kolchin s clear and comprehensive papers in themselves constituting a history of the subject is an invaluable aid to the student of differential algebra In 1910 Ritt created a theory of algebraic differential equations modeled not on the existing transcendental methods of Lie but rather on the new algebra being developed by E Noether and B van der Waerden Building on Ritt s foundation and deeply influenced by Weil and Chevalley Kolchin opened up Ritt theory to modern algebraic geometry In so doing he led differential geometry in a new direction By creating differential algebraic geometry and the

theory of differential algebraic groups Kolchin provided the foundation for a new geometry that has led to both a striking and an original approach to arithmetic algebraic geometry Intriguing possibilities were introduced for a new language for nonlinear differential equations theory The volume includes commentary by A Borel M Singer and B Poizat Also Buium and Cassidy trace the development of Kolchin's ideas from his important early work on the differential Galois theory to his later groundbreaking results on the theory of differential algebraic geometry and differential algebraic groups Commentaries are self contained with numerous examples of various aspects of differential algebra and its applications Central topics of Kolchin's work are discussed presenting the history of differential algebra and exploring how his work grew from and transformed the work of Ritt New directions of differential algebra are illustrated outlining important current advances Prerequisite to understanding the text is a background at the beginning graduate level in algebra specifically commutative algebra the theory of field extensions and Galois theory

Selected Works of Ilya Piatetski-Shapiro Il'iā Iosifovich Piatetski-Shapiro, 2000 Piatetski-Shapiro himself with the consultation of the editors selected these 162 papers some of which appear in English for the first time Together they represent almost 50 years of his service to mathematics and though arranged by subject are nearly in chronological order Each of the sections conclude with commentary on the entire work of Piatetski-Shapiro's in that area including related developments Following his autobiographical Etude on life and automorphic forms in the Soviet Union sections cover early papers in harmonic analysis and number theory automorphic functions and discrete groups bounded homogeneous domains applied mathematics algebraic geometry automorphic L functions and theta lifts and applications to generalized Ramanujan conjectures Books and long papers have been excluded No index Annotation copyrighted by Book News Inc Portland OR

The Selected Works of Sigurdur Helgason Sigurdur Helgason, 2009 Sigurdur Helgason is a leading expert in harmonic analysis and integral geometry on symmetric spaces His work has had and continues to have a profound influence on the field Helgason's work is marked by an interplay of analysis geometry and representation theory The articles collected here cover invariant differential operators geometric properties of solutions to differential equations on symmetric spaces double fibrations in integral geometry spherical functions and spherical transforms duality for symmetric spaces representation theory and the Fourier transform on G/K The papers are supplemented by an introductory essay by Helgason This Selecta of Sigurdur Helgason's important papers will be a valuable resource to research mathematicians and graduate students

Selected Works of Frederick J. Almgren, Jr. Frederick J. Almgren, 1999 This volume offers a unique collection of some of the work of Frederick J. Almgren Jr the man most noted for defining the shape of geometric variational problems and for his role in founding The Geometry Center Included in the volume are the following a summary by Sheldon Chang of the famous 1700 page paper on singular sets of area minimizing m dimensional surfaces in $\mathbb{R}^n$ a detailed summary by Brian White of Almgren's contributions to mathematics his own announcements of several longer papers important shorter papers and memorable expository papers Almgren's enthusiasm

for the subject and his ability to locate mathematically beautiful problems that were ready to be solved attracted many students who further expanded the subject into new areas Many of these former students are now known for the clarity of their expositions and for the beauty of the problems that they work on As Almgren's former graduate student wife and colleague Professor Taylor has compiled an important volume on an extraordinary mathematician This collection presents a fine comprehensive view of the man's mathematical legacy

Selected Works of Ilya Piatetski-Shapiro James Cogdell, Simon Gindikin, Peter Sarnak, 2022-11-03 This selection of papers of I Piatetski Shapiro represents almost 50 years of his mathematical activity Included are many of his major papers in harmonic analysis number theory discrete groups bounded homogeneous domains algebraic geometry automorphic forms and automorphic L functions The papers in the volume are intended as a representative and accurate reflection of both the breadth and depth of Piatetski Shapiro's work in mathematics Some of his early works such as those on the prime number theorem and on sets of uniqueness for trigonometric series appear for the first time in English Also included are several commentaries by his close colleagues This volume offers an elegant representation of the contributions made by this renowned mathematician

Selected Works of Maurice Auslander Maurice Auslander, 1999 Auslander made contributions to many parts of algebra and this 2 volume set the set ISBN is 0 8218 0679 3 already published contains a selection of his main work

Mathematics as Metaphor I. I. Manin, 2007 Includes essays that are grouped in three parts Mathematics Mathematics and Physics and Language Consciousness and Book reviews This book is suitable for those interested in the philosophy and history of mathematics physics and linguistics

Selected Works of Phillip A. Griffiths with Commentary Phillip Griffiths, 2003 Containing four parts such as Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems that are organized according to the subject matter this title provides the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century

The Collected Papers of William Burnside: Commentary on Burnside's life and work ; Papers 1883-1899 William Burnside, 2004 William Burnside was one of the three most important algebraists who were involved in the transformation of group theory from its nineteenth century origins to a deep twentieth century subject Building on work of earlier mathematicians they were able to develop sophisticated tools for solving difficult problems All of Burnside's papers are reproduced here organized chronologically and with a detailed bibliography Walter Feit has contributed a foreword and a collection of introductory essays are included to provide a commentary on Burnside's work and set it in perspective along with a modern biography that draws on archive material

The Abel Prize Helge Holden, Ragni Piene, 2009-12-01 The book presents the winners of the first five Abel Prizes in mathematics 2003 Jean Pierre Serre 2004 Sir Michael Atiyah and Isadore Singer 2005 Peter D Lax 2006 Lennart Carleson and 2007 S R Srinivasa Varadhan Each laureate provides an autobiography or an interview a curriculum vitae and a complete bibliography This is complemented by a scholarly description of their work written by leading experts in the field and by a brief history of the
