**Stalinist Science** Nikolai Kremmentsov, 1996-11-25 Some scholars have viewed the Soviet state and science as two monolithic entities with bureaucrats as oppressors and scientists as defenders of intellectual autonomy Based on previously unknown documents from the archives of state and Communist Party agencies and of numerous scientific institutions Stalinist Science shows that this picture is oversimplified Even the reinstated Science Department within the Central Committee was staffed by a leading geneticist and others sympathetic to conventional science In fact a symbiosis of state bureaucrats and scientists established a much more terrifying system of control over the scientific community than any critic of Soviet totalitarianism had feared Some scientists on the other hand developed more elaborate devices to avoid and exploit this control system than any advocate of academic freedom could have reasonably hoped Nikolai Kremmentsov argues that the model of Stalinist science already taking hold during the thirties was reversed by the need for inter Allied cooperation during World War II Science as a tool for winning the war and as a diplomatic and propaganda instrument began to enjoy higher status better funding and relative autonomy Even the reinstated Science Department within the Central Committee was staffed by a leading geneticist and others sympathetic to conventional science However the onset of the Cold War led to a campaign for eliminating such servility to the West Then the Western links that had benefited genetics and other sciences during the war and through 1946 became a liability and were used by Lysenko and others to turn back to the repressive past and to delegitimize whole research directions      Using Learning Principles in Predictive Risk Assessment Dolores Ann Buckbee, 1997      Animal Behavior Michael D. *The Embodied Mind* Thomas R. Verny, 2021-10-05

As groundbreaking synthesis that promises to shift our understanding of the mind brain connection and its relationship with our bodies We understand the workings of the human body as a series of interdependent physiological relationships muscle interacts with bone as the heart responds to hormones secreted by the brain all the way down to the inner workings of every cell To make an organism function no one component can work alone In light of this why is it that the accepted understanding that the physical phenomenon of the mind is attributed only to the brain In *The Embodied Mind* internationally renowned psychiatrist Dr Thomas R Verny sets out to redefine our concept of the mind and consciousness He brilliantly compiles new research that points to the mind's ties to every part of the body *The Embodied Mind* collects disparate findings in physiology genetics and quantum physics in order to illustrate the mounting evidence that somatic cells not just neural cells store memory inform genetic coding and adapt to environmental changes all behaviors that contribute to the mind and consciousness Cellular memory Verny shows is not just an abstraction but a well documented scientific fact that will shift our understanding of memory Verny describes single celled organisms with no brains demonstrating memory and points to the remarkable case of a French man who despite having a brain just a fraction of the typical size leads a normal life with a family and a job *The Embodied Mind* shows how intelligence and consciousness traits traditionally attributed to the brain alone also permeate our entire being Bodily cells and tissues use the same molecular mechanisms for memory as our brain making our mind more fluid and adaptable than we could have ever imagined
