**The Tangled Field** Nathaniel C. COMFORT, Nathaniel C Comfort, 2009-06-30 This biographical study illuminates one of the most important yet misunderstood figures in the history of science Barbara McClintock 1902 1992 a geneticist who integrated classical genetics with microscopic observations of the behavior of chromosomes was regarded as a genius and as an unorthodox nearly incomprehensible thinker In 1946 she discovered mobile genetic elements which she called controlling elements Thirty seven years later she won a Nobel Prize for this work becoming the third woman to receive an unshared Nobel in science Since then McClintock has become an emblem of feminine scientific thinking and the tragedy of narrow mindedness and bias in science Using McClintock s research notes newly available correspondence and dozens of interviews with McClintock and others Comfort argues that McClintock s work was neither ignored in the 1950s nor wholly accepted two decades later Nor was McClintock marginalized by scientists throughout the decades of her alleged rejection she remained a distinguished figure in her field Comfort replaces the McClintock myth with a new story rich with implications for our understanding of women in science and scientific creativity

**Transposable Elements** Esra Galun, 2003-07-31 OY PONEOYLI TOIA YTA IIOAAOI OKOEOJII Many fail to grasp what they have seen and cannot judge what they have learned ErKYPEOYLI OYL1E MA ONTEE ITINOEKOYIT although they tell themselves they know EQYTOJII L1E L10KEOYLI Heraclitus of Ephesus 500 BC everyone that is not speckled and C T v N T ji N tuN spotted among the goats and brown among the sheep that shall be counted N N n c w c m stolen with me Genesis Chapter 30 From Heraclitus of Ephesus and later philosophers we can deduce that observation of natural phenomena even when keen and accurate will not result in meaningful knowledge unless combined with analysis of the mind just as analysis of the mind without acquaintance with natural phenomena will not suffice to grasp the perceivable world Only familiarity with phenomena combined with mental analysis will lead to additional knowledge The citation from Genesis Chapter 30 is part of an unusual story It tells how Jacob received as payment for his service to Laban the bulk of Laban s herds By agreement Jacob was to receive only the newborn speckled and spotted goats and the newborn brown sheep that differed completely from their parents Did Jacob know that there was instability transposable elements in the pigmentation of Laban s herd It is reasonable to assume that Jacob combined his keen observation with analysis of his mind in order to predict the outcome most of the newborns were indeed speckled spotted or brown

**RNA, the Epicenter of Genetic Information** John Mattick, Paulo Amaral, 2022-09-20 The origin story and emergence of molecular biology is muddled The early triumphs in bacterial genetics and the complexity of animal and plant genomes complicate an intricate history This book documents the many advances as well as the prejudices and founder fallacies It highlights the premature relegation of RNA to simply an intermediate between gene and protein the underestimation of the amount of information required to program the development of multicellular organisms and the dawning realization that RNA is the cornerstone of cell biology development brain function and probably evolution itself Key

Monocots Elizabeth A. Kellogg, 2015-05-18 This volume is the outcome of a modern phylogenetic analysis of the grass family based on multiple

sources of data in particular molecular systematic studies resulting from a concerted effort by researchers worldwide including the author In the classification given here grasses are subdivided into 12 subfamilies with 29 tribes and over 700 genera The keys and descriptions for the taxa above the rank of genus are hierarchical i e they concentrate upon characters which are deemed to be synapomorphic for the lineages and may be applicable only to their early diverging taxa Beyond the treatment of phylogeny and formal taxonomy the author presents a wide range of information on topics such as the structural characters of grasses their related functional aspects and particularly corresponding findings from the field of developmental genetics with inclusion of genes and gene products instrumental in the shaping of morphological traits in which this volume appears unique within this book series further topics addressed include the contentious time of origin of the family the emigration of the originally shade loving grasses out of the forest to form vast grasslands accompanied by the switch of many members to C4 photosynthesis the impact of herbivores on the silica cycle housed in the grass phytoliths the reproductive biology of grasses the domestication of major cereal crops and the affinities of grasses within the newly circumscribed order Poales This volume provides a comprehensive overview of existing knowledge on the Poaceae Gramineae with major implications in terms of key scientific challenges awaiting future research It certainly will be of interest both for the grass specialist and also the generalist seeking state of the art information on the diversity of grasses the most ecologically and economically important of the families of flowering plants
