Bringing together cultural history visual studies and media archaeology Bruno considers the interrelations of projection atmosphere and environment Projection has long been transforming space from shadow plays to camera obscuras and magic lantern shows Our fascination with projection is alive on the walls of museums and galleries and woven into our daily lives Giuliana Bruno explores the histories of projection and atmosphere in visual culture and their continued importance to contemporary artists who are reinventing the projective imagination with atmospheric thinking and the use of elemental media To explain our fascination with projection and atmosphere Bruno traverses psychoanalysis environmental philosophy architecture the history of science visual art and moving image culture to see how projective mechanisms and their environments have developed over time She reveals how atmosphere is formed and mediated how it can change and what projection can do to modify a site In so doing she gives new life to the alchemic possibilities of transformative projective atmospheres Showing how their environmentality produces sites of exchange and relationality this book binds art to the ecology of atmosphere Material Modernity Deborah Ascher Barnstone,Maria Makela,2022-01-27

Material Modernity explores creative innovation in German art design and architecture during the Weimar Republic charting both the rise of new media and the re fashioning of old media Weimar became famous for the explosion of creative ingenuity across the arts in Germany due to experiments with new techniques including the move towards abstraction in painting and sculpture and inventive work in such new media as paper and plastic which utilized both new and old methods of art production Individual chapters in this book consider inventions such as the camera and materials like celluloid examine the role of new materials including concrete composites in opening up fresh avenues in the plastic arts and relate advances in the understanding of color perception and psychology to an increased interest in visual perception and the latent potential of color as both architectural ornament and carrier of emotional force in space While art historians usually argue that experimentation in the Weimar Republic was the result of an intentional rejection of traditional modes of expression in the conscious attempt to invent a modern art and architecture unshackled from historic media and methods this volume shows that the drivers for innovation were often far more complex and nuanced It first of all describes how the material shortages precipitated by the First World War along with the devastation to industrial infrastructure and disruption of historic trade routes affected art as did a spirit of experimentation that permeated interwar German culture It then analyzes new challenges in the 1920s to artistic conventions in traditional art modes like painting sculpture drawing architecture textiles and print making and simultaneously probes the likely causes of innovative new methods of artistic production that appeared such as photomontage assemblage mechanical art and multi media art In doing so Material Modernity fills a significant gap in

Weimar scholarship and art history literature Rise of Abstract Everett Sinclair, AI, 2025-02-26 Rise of Abstract explores how abstract sculpture revolutionized art and design by shifting focus from representation to form material and space It examines the philosophical and socio cultural forces behind this shift highlighting how early 20th century artists broke from tradition to explore new modes of expression The book reveals abstract sculpture s lasting influence demonstrating its principles in architecture product design and user interface design The book argues that abstract sculpture fostered innovation in design by prioritizing experimentation and problem solving through form bridging the gap between fine art and practical applications One intriguing fact is how the rise of abstraction coincided with rapid industrialization reflecting a desire to break free from established conventions The book progresses from defining abstract sculpture s core tenets and examining contributing artistic movements like Cubism and Futurism to exploring its influence on various design disciplines and discussing its contemporary relevance This book uniquely focuses on abstract sculpture s impact on design often overlooked in art history Through historical documents artist manifestos and contemporary design research it provides a comprehensive look at how abstract art reshaped the design world By adopting a balanced tone Rise of Abstract makes complex ideas accessible to students practitioners and anyone interested in the history of modern art and its relationship to contemporary culture The Oxford Dictionary of American Art & Artists Ann Lee Morgan, 2018-10-04 This new edition of The Oxford Dictionary of American Art and Artists has been fully revised and updated as well as including dozens of new entries offering an insightful and informative view of America s artistic heritage An indispensable biographical and critical guide to American art from colonial times to contemporary postmodernism this valuable resource provides readers with a wealth of factual detail and perceptive analysis of America s leading artists This new edition has been updated to include a number of entries on prevailing topics such as body art light and space Indian American art scatter art and transactional art and features many new or greatly expanded biographical entries on artists such as Ida Applebroog Guerilla Girls Peter Hujar and Shirin Neshat Morgan offers readers a wealth of authoritative information as well as well informed analysis and criticism of artists and their work Filled with fascinating historical background and penetrating insight The Oxford Dictionary of American Art and Artists is an essential resource for art lovers everywhere **Movement, Time, Technology, and Art** Christina Chau, 2017-06-12 This book explores the ways in which artists use technology to create different perceptions of time in art in order to reflect on contemporary relationships to technology By considering the links between technology movement and contemporary art the book explores changing relationship between temporality in art art history media art theory modernity contemporary art and digital art This book challenges the dominant view that kinetic art is an antiquated artistic experiment and considers the changing perception of kinetic art by focusing on exhibitions and institutions that have recently challenged the notion of kinetic art as a marginalised and forgotten artistic experiment with mechanical media This is achieved by deconstructing Frank Popper s argument that kinetic art is a precursor to subsequent explorations in the

intersections between art science and technology Rather than pandering to the prevailing art historical assumption that kinetic sculpture is merely a precursor to art in a digital culture the book proposes that perhaps kineticism succeeded too well where movement has become a ubiquitous element of the aesthetic of contemporary art If as Boris Groys has recently suggested installation has become the dominant mode of art in the contemporary age then movement in real time with the viewer is used to aestheticise and explore the facets of our peculiar time **Twentieth-Century American Art** Erika

Doss,2002-04-26 Jackson Pollock Georgia O Keeffe Andy Warhol Julian Schnabel and Laurie Anderson are just some of the major American artists of the twentieth century From the 1893 Chicago World s Fair to the 2000 Whitney Biennial a rapid succession of art movements and different styles reflected the extreme changes in American culture and society as well as America s position within the international art world This exciting new look at twentieth century American art explores the relationships between American art museums and audiences in the century that came to be called the American century Extending beyond New York it covers the emergence of Feminist art in Los Angeles in the 1970s the Black art movement the expansion of galleries and art schools and the highly political public controversies surrounding arts funding All the key movements are fully discussed including early American Modernism the New Negro movement Regionalism Abstract

innovative study of two of the most important artists of the twentieth century links the art practices of Allan Kaprow and Robert Smithson in their attempts to test the limits of art both what it is and where it is Ursprung provides a sophisticated yet accessible analysis placing the two artists firmly in the art world of the 1960s as well as in the art historical discourse of the following decades Although their practices were quite different they both extended the studio and gallery into desert landscapes abandoned warehouses industrial sites train stations and other spaces Ursprung bolsters his argument with substantial archival research and sociological and economic models of expansion and limits History of Art Horst

The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak
