Paleoclimatology Colin P. Summerhayes, 2020-06-10 Life on our planet depends upon having a climate that changes within narrow limits not too hot for the oceans to boil away nor too cold for the planet to freeze over Over the past billion years Earth s average temperature has stayed close to 14 15 C oscillating between warm greenhouse states and cold icehouse states We live with variation but a variation with limits Paleoclimatology is the science of understanding and explaining those variations those limits and the forces that control them Without that understanding we will not be able to foresee future change accurately as our population grows Our impact on the planet is now equal to a geological force such that many geologists now see us as living in a new geological era the Anthropocene Paleoclimatology describes Earth s passage through the greenhouse and icehouse worlds of the past 800 million years including the glaciations of Snowball Earth in a world that was then free of land plants It describes the operation of the Earth s thermostat which keeps the planet fit for life and its control by interactions between greenhouse gases land plants chemical weathering continental motions volcanic activity orbital change and solar variability It explains how we arrived at our current understanding of the climate

system by reviewing the contributions of scientists since the mid 1700s showing how their ideas were modified as science progressed And it includes reflections based on the author s involvement in palaeoclimatic research The book will transform debate and set the agenda for the next generation of thought about future climate change It will be an invaluable course reference for undergraduate and postgraduate students in geology climatology oceanography and the history of science A real tour de force An outstanding summary not only of the science and what needs to be done but also the challenges that are a consequence of psychological and cultural baggage that threatens not only the survival of our own species but the many others we are eliminating as well Peter Barrett Emeritus Professor of Geology Antarctic Research Centre Victoria University of Wellington New Zealand What a remarkable and wonderful synthesis it will be a wonderful source of paleoclimate information and insights Christopher R Scotese Professor Department of Earth and Planetary Sciences Northwestern University Evanston IL USA *Monthly Weather Review* ,1981 The Contract of Carriage Paula Bäckdén,2019-01-28 The Contract of Carriage Multimodal Transport and Unimodal Regulation provides a new perspective on how to approach the question of multimodal transport regulation regarding liability for goods carried Unlike previous literature which has approached the issue of applicability from a strict interpretation of the convention angle this book will analyse the issue from a law of contracts perspective If goods are damaged during international transport the carrier s liability is governed by rules laid down in international conventions such as the CMR convention the Hague Visby Rules and the Montreal Convention Such rules apply to certain modes of transport to contracts for unimodal carriage When goods are carried under a multimodal contract of carriage which provides for carriage by more than one mode of transport the question is whether these rules are applicable to transport under multimodal contracts of carriage This book investigates the rules of carrier s liability applicable to unimodal transport and whether these rules are applicable to carriage under multimodal contracts of carriage with focus on the actual contract of carriage This unique text will be of great interest to students academics industry professionals and legal practitioners alike **Nonlinear Ocean Dynamics** Maged Marghany,2021-02-09 Nonlinear Ocean Dynamics Synthetic Aperture Radar delivers the critical tools needed to understand the latest technology surrounding the radar imaging of nonlinear waves particularly microwave radar as a main source to understand analyze and apply concepts in the field of ocean dynamic surface Filling the gap between modern physics quantum theory and applications of radar imaging of ocean dynamic surface this reference is packed with technical details associated with the potentiality of synthetic aperture radar SAR The book also includes key methods needed to extract the value added information necessary such as wave spectra energy current pattern velocity internal waves and more This book also reveals novel speculation of a shallow coastal front named as Quantized Marghany s Front Rounding out with practical simulations of 4 D wave current interaction patterns using using radar images the book brings an effective new source of technology and applications for today s coastal scientists and engineers Solves specific problems surrounding the nonlinearity of ocean surface dynamics in synthetic aperture radar
