Feature Extraction, Construction and Selection Huan Liu, Hiroshi Motoda, 2012-12-06 There is broad interest in feature extraction construction and selection among practitioners from statistics pattern recognition and data mining to machine learning Data preprocessing is an essential step in the knowledge discovery process for real world applications This book compiles contributions from many leading and active researchers in this growing field and paints a picture of the state of art techniques that can boost the capabilities of many existing data mining tools The objective of this collection is to increase the awareness of the data mining community about the research of feature extraction construction and selection which are currently conducted mainly in isolation This book is part of our endeavor to produce a contemporary overview of modern solutions to create synergy among these seemingly different branches and to pave the way for developing meta systems and novel approaches Even with today s advanced computer technologies discovering knowledge from data can still be fiendishly hard due to the characteristics of the computer generated data Feature extraction construction and selection are a set of techniques that transform and simplify data so as to make data mining tasks easier Feature construction and selection can be viewed as two sides of the representation problem

Quest, 1917 *Why care for Nature?* Dirk Willem Postma, 2006-10-31 Don't you see that the whole aim of Newspeak is to narrow the range of thought 1 George Orwell This book has been written in a time of environmental neglect A time in which the expansive needs of multinational corporations western consumer interests and the politically celebrated ideals of economic growth and technological progress appear to override any consideration for preserving natural beauty as well as consideration for those unable to speak and negotiate on their own behalf third world citizens future generations animals plants and landscapes This neglect is evident in the withdrawal of national governments from the requirements of international agreements on the reduction of greenhouse gas emissions Kyoto treaty it is manifest in the organised inability and unwillingness to establish more equal trade relations between rich and poor countries as well as in the lack of political commitment to protect extraordinary sites of natural beauty

from economic exploitation Alaska the Amazon rainforests the Dutch Wadden Sea In times like these environmental education is a hazardous and primarily ambiguous enterprise since it easily comes to function as a means to foist present responsibilities onto future generations Some proponents for instance argue that environmental education should create a new generation of citizens who are greener than their parents Bell 2004 p 43 Thus new born citizens are burdened with environmental responsibilities that we failed to live up to ourselves

Programming Constraint Services Christian Schulte, 2003-08-01

Constraint Programming is an approach for modeling and solving combinatorial problems that has proven successful in many applications It builds on techniques developed in Artificial Intelligence Logic Programming and Operations Research Key techniques are constraint propagation and heuristic search Constraint Programming is based on an abstraction that

decomposes a problem solver into a reusable constraint engine and a declarative program modeling the problem. The constraint engine implements the required propagation and search algorithms. It can be realized as a library for a general purpose programming language e.g. C as an extension of an existing language e.g. Prolog or as a system with its own dedicated language. The present book is concerned with the architecture and implementation of constraint engines. It presents a new concurrent architecture that is far superior to the sequential architecture underlying Prolog. The new architecture is based on concurrent search with copying and recomputation rather than sequential search with trailing and backtracking. One advantage of the concurrent approach is that it accommodates any search strategy. Furthermore it considerably simplifies the implementation of constraint propagation algorithms since it eliminates the need to account for trailing and backtracking. The book investigates an expressive generalization of the concurrent architecture that accommodates propagation preserving combinators known as deep guard combinators for negation, disjunction, implication and retraction of constraint propagators. Such combinators are beyond the scope of Prolog's technology. In the concurrent approach they can be obtained with a reflective encapsulation primitive.

Fuzzy Systems and Soft Computing in Nuclear Engineering Da Ruan, 2013-11-21

Fuzzy systems and soft computing are new computing techniques that are tolerant to imprecision, uncertainty and partial truths. Applications of these techniques in nuclear engineering present a tremendous challenge due to its strict nuclear safety regulation. The fields of nuclear engineering, fuzzy systems and soft computing have nevertheless matured considerably during the last decade. This book presents new application potentials for Fuzzy Systems and Soft Computing in Nuclear Engineering. The root of this book can be traced back to the series of the first, second and third international workshops on Fuzzy Logic and Intelligent Technologies in Nuclear Science (FUNS) which were successfully held in Mol, September 14-16, 1994 (FLINS 94); in Mol, September 25-27, 1996 (FLINS 96); and in Antwerp, September 14-16, 1998 (FLINS 98). The conferences were organised by the Belgian Nuclear Research Centre (SCK-CEN) and aimed at bringing together scientists, researchers and engineers from academia and industry at introducing the principles of fuzzy logic, neural networks, genetic algorithms and other soft computing methodologies to the field of nuclear engineering and at applying these techniques to complex problem solving within nuclear industry and related research fields. This book, as its title suggests, consists of nuclear engineering applications of fuzzy systems (Chapters 1-10) and soft computing (Chapters 11-21). Nine pertinent chapters are based on the extended version of papers at FLINS 98 and the other 12 chapters are original contributions with up-to-date coverage of fuzzy and soft computing applications by leading researchers written exclusively for this book.
