Chemical Information for Chemists Judith N Currano, Dana Roth, 2014-03-17 While it is not difficult to find data in many cases what advice can you get on the quality of the data retrieved Chemical Information for Chemists could help with this problem and more This book is a chemical information book aimed specifically at practicing chemists Written and edited by experts in the field it is ideal for chemists who lack a chemical information professional able to teach basic and intermediate techniques in retrieving and evaluating information using the unique entry points of the chemical literature including structure formula substructure and sequence Aimed at students on undergraduate and graduate courses it could also be a useful guide to new information specialists who are facing the challenging diversity of chemical literature

Corporate History and the Chemical Industries Jeffrey Louis Sturchio, 1985 Three essays on the historiography of the chemical process industries on business archives and on oral history in the corporate setting provide the context for extensive annotated bibliographies in the three areas

Chemical Librarianship Arleen N Somerville, 2013-10-18 As early as the 18th century chemists emphasis on up to date literature presented research librarians with many challenges But now Chemical Librarianship Challenges and Opportunities will show you how you can adapt your methods to the rapidly evolving demands of twentieth century chemical researchers without sacrificing your high standards of service Altogether this comprehensive overview helps you see the major role librarians still play in information education and gives you a broad assortment of strategies for coping with the accelerated demands of today s shifting electronic research environment In Chemical Librarianship you ll read about the revolutionary pedagogical experiments of librarians teachers computer specialists and graduate students You ll see how those experiments have altered the way they approach research for the better and how you can make positive adjustments in your own successful formulae Individual chapters discuss librarians as teachers the pros and cons of integrating separating chemical information courses faculty and computing staff partnership at the University of Florida Yale University s experiment with The Electronic Seminar System the evolution of electronic journals the most recent trends in academic serial collection Take 100 mg of quickly changing research technology a drop of increased enrollment and 250 cc s of faculty requests shake it up in an Erlenmeyer flask heat it at 200 degrees Celsius and what do you get An explosion A disaster If these are your fears put them away Open up Chemical Librarianship and let some of the most informed experts on research and technology help you and your staff find just the right chemistry

Chemical History Gerrylyn K Roberts, Colin A Russell, 2007-10-31 This book provides an historical overview of the recent developments in the history of diverse fields within chemistry It follows on from Recent Developments in the History of Chemistry a volume published in 1985 Covering chiefly the last 20 years the primary aim of Chemical History Reviews of the Recent Literature is to familiarise newcomers to the history of chemistry with some of the more important developments in the field Starting with a general introduction and look at the early history of chemistry subsequent chapters go on to investigate the traditional

areas of chemistry physical organic inorganic alongside analytical chemistry physical organic chemistry medical chemistry and biochemistry and instruments and apparatus Topics such as industrial chemistry and chemistry in national contexts whilst not featuring as separate chapters are woven throughout the content Each chapter is written by experts and is extensively referenced to the international chemical literature Chemical History Reviews of the Recent Literature is also ideal for chemists who wish to become familiar with historical aspects of their work In addition it will appeal to a wider audience interested in the history of chemistry as it draws together historical materials that are widely scattered throughout the chemical literature *Chemical Engineer*, 1919 *WIPO Re:Search Partnership Stories 2016-2019: Driving R&D for Neglected Infectious Diseases Through Global Cross-Sector Collaborations* World Intellectual Property Organization, 2019-12-02 WIPO Re Search is a global public private consortium that accelerates drug vaccine and diagnostic research and development R D to address unmet medical needs for neglected infectious diseases and drive progress toward the United Nations Sustainable Development Goals Established in 2011 WIPO Re Search catalyzes royalty free sharing of intellectual property including compounds data clinical samples technology and expertise among Consortium Members in targeted mutually beneficial R D collaborations This publication contain stories of collaborations established through WIPO Re Search from 2016 to 2019 *Drug and Chemical Markets*, 1920 *The Chemical Bulletin*, 1919 *Chemical Age*, 1914 *The Story of Taxol* Jordan Goodman, Vivien Walsh, 2001-03-05 Taxol is arguably the most celebrated talked about and controversial natural product in recent years It is celebrated because of its efficacy as an anti cancer drug and because its discovery has provided powerful support for policies concerned with biodiversity talked about because in the late 1980s and early 1990s the American public was bombarded with news reports and special programmes about the molecule and its host the Pacific yew and controversial because during the early 1990s the drug and the tree became embroiled in a number of very sensitive political issues with wide implications for the conduct of public policy The Story of Taxol tells this story *Introduction to Chemical Dependency Counseling* Jerome David Levin, Joseph Culkin, Richard S. Perrotto, 2001 Suitable for use by students preparing to take the Certified Alcoholism and Substance Abuse Counselor CASAC exams this text provides and introduction to alcoholism and drug addiction *The Science of Addiction: From Neurobiology to Treatment* Carlton K. Erickson, 2007-02-17 A leading addictions specialist presents information about the neurobiology of drug and alcohol addictions and how individuals with addictions respond to various therapies The strong focus on the most commonly addictive drugs alcohol nicotine cocaine heroin as well as others ensures wide coverage of this issue *The Chemical News and Journal of Industrial Science*, 1921 *When Chemistry Meets Biology - Generating Innovative Concepts, Methods and Tools for Scientific Discovery in the Plant Sciences* Erich Kombrink, Markus Kaiser, 2016-08-12 Biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems This is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation

or protein degradation In contrast to animal systems which are nurtured from drug research the systematic development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes In particular when small molecules are integrated into genetic strategies thereby defining chemical genetics they may help to circumvent inherent problems of classical forward genetics There are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach These include the unraveling of molecular mechanisms and critical steps in hormone signaling activation of defense reactions and dynamic intracellular processes The intention of this Research Topic of Frontiers in Plant Physiology is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges The research topic covers diverse aspects of plant chemical biology including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources which rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound s activity selectivity and ultimately the identification of its protein target s and mode of action which is yet the biggest challenge of all Such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease New methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology In addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments To achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists The development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology The current Research Topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions

The First Miracle Drugs John E. Lesch, 2007 In the decade from 1935 1945 while the Second World War raged in Europe a new class of medicines capable of controlling bacterial infections launched a therapeutic revolution that continues today The new medicines were not penicillin and antibiotics but sulfonamides or sulfa drugs The sulfa drugs preceded penicillin by almost a decade and during World War II they carried the main therapeutic burden in both military and civilian medicine Their success stimulated a rapid expansion of research and production in the international pharmaceutical industry raised expectations of medicine and accelerated the appearance of new and powerful medicines based on research The latter development created new regulatory dilemmas and unanticipated therapeutic

problems The sulfa drugs also proved extraordinarily fruitful as starting points for new drugs or classes of drugs both for bacterial infections and for a number of important non infectious diseases This book examines this breakthrough in medicine pharmacy and science in three parts Part I shows that an industrial research setting was crucial to the success of the revolution in therapeutics that emerged from medicinal chemistry Part II shows how national differences shaped the reception of the sulfa drugs in Germany France Britain and the United States The author uses press coverage of the day to explore popular perceptions of the dramatic changes taking place in medicine Part III documents the impact of the sulfa drugs on the American effort in World War II It also shows how researchers came to an understanding of how the sulfa drugs worked adding a new theoretical dimension to the science of pharmacology and at the same time providing a basis for the discovery of new medicinal drugs in the 1940s 1950s and 1960s A concluding chapter summarizes the transforming impact of the sulfa drugs on twentieth century medicine tracing the therapeutic revolution from the initial breakthrough in the 1930s to the current search for effective treatments for AIDS and the new horizons opened up by the human genome project and stem cell research

Baykoucheva, 2021-09-30 New digital technologies have transformed how scientific information is created disseminated and discovered The emergence of new forms of scientific publishing based on open science and open access have caused a major shift in scientific communication and a restructuring of the flow of information Specialized indexing services and search engines are trying to get into information seekers minds to understand what users are actually looking for when typing all these keywords or drawing chemical structures Using artificial intelligence AI machine learning and semantic indexing these discovery agents are trying to anticipate users information needs In this highly competitive environment authors should not sit and rely only on publishers search engines and indexing services to make their works visible They need to communicate about their research and reach out to a larger audience Driving Science Information Discovery in the Digital Age looks through the eyes of the main players in this game and examines the discovery of scientific information from three different but intertwined perspectives Discovering managing and using information Information seeker perspective Publishing disseminating and making information discoverable Publisher perspective Creating spreading and promoting information Author perspective Presents an overview of the current scientific publishing landscape Shows how users can search for

scientific information more efficiently Critically analyses the metrics used to measure the quality of journals and the impact of research Looks at the discovery of scientific information from the perspectives of information seekers publishers and authors Delves into the practices used by specialized indexing services and search engines to process scientific information and make it discoverable Recommends strategies that authors could use to promote their research **The Chemical Industry Facts Book** ,1953 *Chemical & Metallurgical Engineering* Eugene Franz Roeber,Howard Coon Parmelee,1921 **The Chemical World** ,1914
