

The search for extraterrestrial life—and the future of life on Earth

ARNOLD WOLFENDALE

Introduction

One of the great questions for humanity is "Are we alone?" The question is not a new one, of course, but has taken on the form since the last year or two. For it is now one of possession. First, nuclear technology has achieved such high sensitivities that we look for signs of life from the distances of other stars. We seek all "intelligent" radio signals, in fact, by listening for them. Secondly, recent claims for the detection of great (and possibly "life") on Mars have raised the possibility of the actual formation of "voluntary" life being very common. Finally, the observations of "dark-ening" comets and asteroids has pointed out the threat to life on Earth from the impacts of these bodies. Another impact on other (possible) life-bearing planets is one of the factors which must be considered when estimating how many "civilizations" there are likely to be in the Galaxy.

Historical attitudes

There have, commonly held opinions, that "intelligent life" is quite common in the Galaxy (at least a few). From many traditions, even the quietest part from by the Greek Philosophers, Lucretius and by the Chinese Philosophers, Tsung Shi.

United States. National Aeronautics and Space Administration, 1968 Current Contents , 1999 Cosmic Quips and Scientific Surprises Pasquale De Marco, 2025-07-23 Cosmic Quips and Scientific Surprises Exploring the Mysteries of Science Nature and Technology is a collection of essays that delve into some of the most fascinating and thought provoking topics in science nature and technology In this book you will explore the wonders of the cosmos from the Big Bang to the search for extraterrestrial life You will investigate the laws of motion and the properties of matter and learn about the amazing diversity of life on Earth You will also explore the mysteries of the human mind the history of science and the future of technology This book is not intended to be a comprehensive survey of all scientific knowledge Rather it is a collection of essays that are designed to spark your curiosity

and inspire you to learn more about the world around you Whether you are a seasoned scientist or a curious layperson you will find something to enjoy in these pages One of the things that makes science so fascinating is its ability to change our understanding of the world Just a few centuries ago people believed that the Earth was the center of the universe and that the sun revolved around it Today we know that the Earth is just one of many planets that orbit the sun and that our solar system is just one of billions in the Milky Way galaxy The history of science is full of stories of scientists who challenged the prevailing wisdom of their time and made groundbreaking discoveries Galileo Galilei for example was one of the first scientists to use a telescope to study the heavens His observations led him to conclude that the Earth revolves around the sun not the other way around This was a radical idea at the time and Galileo was persecuted for his beliefs However his work eventually helped to lay the foundation for modern astronomy The process of scientific discovery is not always easy Scientists often have to overcome obstacles such as skepticism prejudice and even outright hostility But when a scientist makes a breakthrough it can have a profound impact on our understanding of the world Science has given us so much It has helped us to understand the universe to cure diseases and to develop new technologies that have made our lives easier and more enjoyable But science is not just about knowledge and technology It is also about a way of thinking Science teaches us to be skeptical to question the world around us and to always be open to new ideas We hope that this book will inspire you to learn more about the world around you and to appreciate the wonders of science If you like this book write a review
