Nienhuis, 2012-12-06 Increasing amounts of various types of wastes and pollutants including nutrients enter the coastal waters via rivers direct discharges from land drainage systems diffuse land runoff dumping and via the atmosphere This has led to coastal eutrophication and in extreme cases to hypertrophication Until recently coastal eutrophication and the resulting effects on marine macrophytes were mainly treated as local short term problems However the local nearshore problems developed into overall coastal and inshore phenomena and recently we have been facing coastal eutrophication problems on a global scale This book is the first comprehensive document systematically covering the entire coastline of Europe on the effects of eutrophication on the marine benthic vegetation      **Bioenergy Production by Anaerobic Digestion** Nicholas Korres, Padraig O'Kiely, John A.H. Benzie, Jonathan S. West, 2013-08-29 Interest in anaerobic digestion AD the process of energy production through the production of biogas has increased rapidly in recent years

Agricultural and other organic waste are important substrates that can be treated by AD. This book is one of the first to provide a broad introduction to anaerobic digestion and its potential to turn agricultural crops or crop residues, animal and other organic waste into biomethane. The substrates used can include any non-woody materials including grass and maize silage, seaweeds, municipal and industrial wastes. These are all systematically reviewed in terms of their suitability from a biological, technical and economic perspective. In the past, the technical competence and high capital investment required for industrial scale anaerobic digesters has limited their uptake, but the authors show that recent advances have made smaller scale systems more viable through a greater understanding of optimising bacterial metabolism and productivity. Broader issues such as life cycle assessment and energy policies to promote AD are also discussed.
