moves on to tubing vibration followed by the water and steam cycle chemistry issues relevant to the NSG lifecycle Finally a number of chapters focus on the key issue of corrosion in NSGs from different angles This book serves as a timely resource for professionals involved in all phases of the NSG lifecycle from design manufacturing operation and maintenance to fitness for service and long term operation It is also intended as a valuable resource for students and researchers interested in a range of topics relating to NSG lifecycle management Fulfills the need for a detailed reference on steam generators for nuclear power plants Contains comprehensive coverage of all phases of the nuclear steam generator lifecycle from design manufacturing operation and maintenance to fitness for service and long term operation in one convenient volume Presents contributions from key manufacturers and research institutes and universities Teaching General Chemistry Mansoor Niaz,2008 The main objective of this monograph is to incorporate history and philosophy of science in the chemistry curriculum in order to provide students an overview of the dynamics of scientific research which involves controversies conflicts and rivalries among scientists that is the humanising aspects of science A major thesis of this book is the parallel between the construction of knowledge by the students and the scientists In looking for this relationship it is not necessary that ontogeny recapitulate phylogeny but rather to establish that students can face similar difficulties in conceptualising problems as those faced by the scientists in the past Given the vast amount of literature on students alternative conceptions misconceptions in science it is plausible to suggest that these can be considered not as mistakes but rather as tentative models leading to greater conceptual understanding Just as scientists resist changes in the hard core of their beliefs by offering auxiliary hypotheses students may adopt similar strategies Conceptual change in science education can thus be conceptualised as building of tentative models that provide greater explanatory power to students understanding

neurodegenerative phenomena Chelation therapy is still in the early days of its development but research in this area could lead to new products that could revolutionize treatment Two international conferences on OC Metals and the Brain From Neurochemistry to NeurodegenerationOCO Padova Italy 2000 and Fez Morocco 2002 were recently held to discuss the role of metal ions in neurophysiopathology A third will be held in 2005 in Johannesburg South Africa This book follows the same train of thought as those conferences in order to highlight the unquestionable importance of metal ions in the research on the neurophysiopathology of neurodegenerative diseases The excellent reputation of the scientists who have contributed to this project ensures the quality of the chapters presented here and hopefully this will help spur new research initiatives in the field which is still in its infancy Contents Metal Catalyzed Redox Activity in Neurodegenerative Disease M A Taddeo et al Aluminum and Central Nervous System Morphology in Hemodialysis E Reusche Transition Metals Oxidation Lipoproteins and Amyloid Major Players in Alzheimer s Disease A Kontush Molecular Basis of Copper Transport Cellular and Physiological Functions of Menkes and Wilson Disease Proteins ATP7A and ATP7B D R Kramer et al Copper Zinc Superoxide Dismutase and Familial Amyotrophic Lateral Sclerosis M B Yim et al Copper and Prion Disease J Sasson Metallothioneins in Neurodegeneration M Aschner et al Iron and Neurodegeneration S L Grab Iron Neuromelanin and Synuclein in Neuropathogenesis of Parkinson s Disease K L Double et al Iron and Epilepsy W Y Ong et al Role of Iron Metabolism in Multiple Sclerosis M J Kotze et al Neuroprotective Effects of Lithium S Ermidiou Pollet and other articles Readership Academics graduate students and researchers in neurology psychiatry neuroscience and environmental health
