#### **Israeli Strategy After Desert Storm** Aharon

Levran, 2014-03-05 Iraq's invasion of Kuwait and the Gulf War had a traumatic effect on the Middle East and its implications were particularly serious for Israel which felt obliged to reassess its strategic and military perspectives This is an examination of the lessons that the Gulf War holds for Israel

Polymer Mechanochemistry Roman Boulatov, 2015-10-17 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or

industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field Review articles for the individual volumes are invited by the volume editors Readership research chemists at universities or in industry graduate students

Dynamic Processes in Solids James E. House, 2023-05-26 The results obtained from kinetic studies on reactions in solids often depend on numerous factors Therefore it is important for researchers to understand how both chemical factors related to composition and procedural choices may influence outcomes Dynamic Processes in Solids provides an authoritative overview of reactions in solids and helps readers interpret the results obtained from kinetic studies In chapters written by active researchers the reader will learn about choosing appropriate experimental techniques and their limitations for studying various types of reactions Beginning with an introduction to numerous aspects of rate processes in solids and experimental techniques information is provided on rate laws factors affecting rates diffusion and sintering Subsequent chapters deal with electrical conductivity in dispersed phase polymers thermochemical reactions for producing solid materials reactions in coordination compounds dynamic observations on plastic deformation light driven phenomena in quantum materials decomposition of perovskite photovoltaic compounds and reaction of oxygen radicals with surfaces This book is a practical introduction to the field for chemists and researchers whose work is directly related to dynamic changes in solids and additionally for those in related fields whose work would be enhanced by an understanding of these types of rate processes Presents useful discussions of the applications of several experimental techniques Describes approaches for synthesis of solid materials by thermochemical reactions Presents theoretical interpretation structural dynamics and processes at the molecular level in solids Provides information on the relationships between performance and rate processes in several types of materials related to electronic behavior
